RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of ILWU Credit Union, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We support AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

A handwritten signature in black ink, appearing to read "Ralph Ruiz", written over a horizontal line.

We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Name Natalee Nixon

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of JAMES RANDOLPH NEUPISK SERVICES, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. On behalf of Just Tech Solutions, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We support AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Name Fred Wasfel

Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Name Luis Lee

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of Carol Alexander (Ms. Alexander Bantye) we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. On behalf of PHILLIE B'S, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Name

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of Happy Deli, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of 3JPS inc, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of J DELUCA FISH COMPANY we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,

RE: AB 1321 (Gipson) - SUPPORT

Dear Senator Stern,

On behalf of Hoja's Premium Tea House LLC, we support AB 1321 which provides the State Lands Commission with the authority of approving automated equipment within California's ports if it is safe and does not cause damage to our local economies including job losses. Our port communities need to be protected from automation.

If ports are fully automated, workers will lose their jobs which will have a negative impact in our local economies. For instance, we would not have individuals making purchases at our local stores, such as grocery stores, clothing stores, and restaurants. People that will be displaced will no longer be able to contribute to the real estate economy. Full automation at our ports means that we would have communities that would be devastated. We want to prevent our cities from becoming Detroit which saw a loss of jobs, decrease in residents and an economic crisis because of the decrease in automobile jobs. Automation will devastate the entire port communities.

The California State Lands Commission's is supposed to provide the people of California with effective stewardship of the lands, waterways, and resources which are entrusted to its care through responsible economic development. Full automation at our ports is not responsible economic development as it only benefits large foreign companies. Local harbor commissions have allowed for full terminal automation and have not protected the communities' interests. The State Lands Commission and local harbor commissions not placing safeguards to protect workers hurts families who have recently purchased their homes, are raising young children, are supporting other family members and putting their children through college.

As business owners/managers, we support improving the air quality in our communities. Terminal operators do not have to displace thousands of workers as there is zero and near-zero emission equipment that can be utilized at our ports. The port community has taken many steps to improve our air quality and improve our residents' health.

Our port communities are currently thriving. Our port communities, workers and businesses continue to contribute to make California the fifth largest economy in the world.

We supports AB 1321 which regulates automation and protects the future economy of our State for the benefit of working Californians and our environment.

Sincerely,
