RPD: Relative Percent Difference. CL: Control Limits

Glossary of Terms and Qualifiers

Work Order: 14-09-2270

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSO or PES/PESO associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

CASE NARRATIVE

Calscience Work Order No.: 14-09-2205
Project ID: GWMA-TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the seawater samples.

Sample Condition on Receipt

Nineteen seawater samples were received for this project on 26 September, 2014. The samples were transferred to the laboratory in an ice-chest with wet ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory was 2.0-2.1°C. All samples were given laboratory identification numbers and logged into the Laboratory Information Management System (LIMS).

Tests Performed

Total Suspended Solids by SM 2540B (M)
Total and Dissolved Metals by EPA 1640/1631
Chlorinated Pesticides by EPA 8081A
PCB Congeners by EPA 8270C SIM

Data Summary

Samples were filtered in the laboratory for the dissolved metals analyses.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Trace levels (below the RL, but above the MDL) of Cadmium, Lead and Zinc were detected in the EPA 1640 Method Blank. The results have been flagged with B-qualifiers.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Matrix Spikes and QC Duplicates

Matrix spike analyses and/or QC Duplicates were performed for each applicable analysis when additional volume was available. All parameters were within the established control limits unless otherwise noted (non-project spike/duplicate samples, if any, are not discussed).

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
PDS - Post Digestion Spike
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 09/26/14. They were assigned to Work Order 14-09-2205.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-09-2205

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSO or PES/PESO associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

CASE NARRATIVE

Calscience Work Order No.: 14-10-0029
Project ID: GWMA-TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the seawater samples.

Sample Condition on Receipt

Thirty-seven seawater samples were received for this project on 1 October, 2014. The samples were transferred to the laboratory in an ice-chest with wet ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory was 2.4-3.2°C. All samples were given laboratory identification numbers and logged into the Laboratory Information Management System (LIMS).

Tests Performed

Total Suspended Solids by SM 2540B (M)
Total and Dissolved Metals by EPA 1640/1631
Chlorinated Pesticides by EPA 8081A
PCB Congeners by EPA 8270C SIM

Data Summary

Samples were filtered in the laboratory for the dissolved metals analyses.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Trace levels (below the RL, but above the MDL) of Mercury were detected in one of the EPA 1631 Method Blank QC Batches. The results have been flagged with B-qualifiers.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Matrix Spikes and QC Duplicates

Matrix spike analyses and/or QC Duplicates were performed for each applicable analysis when additional volume was available. All parameters were within the established control limits unless otherwise noted (non-project spike/duplicate samples, if any, are not discussed).

Laboratory Duplicates

A Lab Dup was performed for samples IA-RW-03-G-S-20149030 and CB-RW-11-G-M-20140930. The RPDs between the duplicates were within the control limits.

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
PDS - Post Digestion Spike
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/01/14. They were assigned to Work Order 14-10-0029.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

RPD: Relative Percent Difference. CL: Control Limits

Glossary of Terms and Qualifiers

Work Order: 14-10-0029

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDS or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

CASE NARRATIVE

Calscience Work Order No.: 14-11-0050
Project ID: GWMA-TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the seawater samples.

Sample Condition on Receipt

Seventeen seawater samples were received for this project on 3 November, 2014. The samples were transferred to the laboratory in an ice-chest with wet ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory was 1.6-1.7°C. All samples were given laboratory identification numbers and logged into the Laboratory Information Management System (LIMS).

Tests Performed

Total Suspended Solids by SM 2540B (M)
Total and Dissolved Metals by EPA 1640/1631
Chlorinated Pesticides by EPA 8081A
PCB Congeners by EPA 8270C SIM

Data Summary

Samples were filtered in the laboratory for the dissolved metals analyses.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Trace levels (below the RL, but above the MDL) of Mercury were detected in the EPA 1631 Method Blanks. If detected in the samples, the results are flagged with B-qualifiers.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Matrix Spikes and QC Duplicates

Matrix spike analyses and/or QC Duplicates were performed for each applicable analysis as sample volume allowed. All parameters were within the established control limits unless otherwise noted (non-project spike/duplicate samples, if any, are not discussed).

The concentration of Copper detected in the sample used for matrix spiking exceeded the matrix spike amounts by four times or more causing the recoveries to be outside of control limits.

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
PDS - Post Digestion Spike
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/03/14. They were assigned to Work Order 14-11-0050.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Total number of LCS compounds: 16

Total number of ME compounds: 0

Total number of ME compounds allowed: 1

LCS ME CL validation result: Pass

RPD: Relative Percent Difference. CL: Control Limits

Glossary of Terms and Qualifiers

Work Order: 14-11-0050

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY FORM

SAMPLES - CONTAINERS & LABELS:

Comments:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired – list sample ID(s) and test
- Insufficient quantities for analysis – list test
- Improper container(s) used – list test
- Improper preservative used – list test
- No preservative noted on COC or label – list test & notify lab
- Sample labels illegible – note test/container type
- Sample label(s) do not match COC – Note in comments
 - Sample ID
 - Date and/or Time Collected
 - Project Information
 - # of Container(s)
 - Analysis
- Sample container(s) compromised – Note in comments
 - Water present in sample container
 - Broken
- Sample container(s) not labeled
- Air sample container(s) compromised – Note in comments
 - Flat
 - Very low in volume
 - Leaking (Not transferred - duplicate bag submitted)
 - Leaking (transferred into Calscience Tedlar® Bag*)
 - Leaking (transferred into Client's Tedlar® Bag*)
- Other: _____

(-5)(-6) Not Received.

Collection time per label is:
(-7) 11:10

(-8)(-9)(-10) 11:40

(-11)(-12)(-13) 13:25

(-14)(-15)(-16) 14:15

(-17) 13:00

Hi Andy-

It appears we are missing two TSS samples. Can you please confirm if we should have received them? See last page of the attached.

Thanks!

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

CASE NARRATIVE

Calscience Work Order No.: 14-11-0041
Project ID: GWMA-TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the seawater samples.

Sample Condition on Receipt

Fifty-four seawater samples were received for this project on 3 November, 2014. The samples were transferred to the laboratory in an ice-chest with wet ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory was 2.0-2.9°C. All samples were given laboratory identification numbers and logged into the Laboratory Information Management System (LIMS).

Tests Performed

Total Suspended Solids by SM 2540B (M)
Total and Dissolved Metals by EPA 1640/1631
Chlorinated Pesticides by EPA 8081A
PCB Congeners by EPA 8270C SIM

Data Summary

Samples were filtered in the laboratory for the dissolved metals analyses.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Trace levels (below the RL, but above the MDL) of Copper and Zinc were detected in the EPA 1640 Method Blanks. The results have been flagged with B-qualifiers.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Matrix Spikes and QC Duplicates

Matrix spike analyses and/or QC Duplicates were performed for each applicable analysis as sample volume allowed. All parameters were within the established control limits unless otherwise noted (non-project spike/duplicate samples, if any, are not discussed).

Laboratory Duplicates

A Lab Dup was performed for sample OB-RW-17-G-S-20141102. The RPDs between the duplicates were within the control limits.

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
PDS - Post Digestion Spike
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/03/14. They were assigned to Work Order 14-11-0041.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-11-0041

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDS or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

1.0 INTRODUCTION

The Port of Los Angeles (POLA) and the Port of Long Beach ([POLB] herein referred to as the Ports) jointly participated in monitoring requirements in support of the Dominguez Channel, Greater Los Angeles and Long Beach Harbor Waters Toxic Pollutants Total Maximum Daily Load (TMDL), State Water Resources Control Board (SWRCB) Resolution No. R11-008 (referred to as the “Harbor Toxics TMDL”). Monitoring requirements in support of the TMDL in 2013 were fulfilled by the Ports through participation with the region-wide Bight '13 monitoring efforts coordinated by the Southern California Coastal Water Research Project (SCCWRP). Program management and sample collection for the Ports was performed by AMEC Environment & Infrastructure, Inc. (AMEC).

AMEC has partnered with Nautilus Environmental (Nautilus) to perform sediment toxicity testing as part of the Harbor Toxics TMDL program. Since the Harbor Toxics TMDL program coincided with the Southern California Bight 2013 Regional Marine Monitoring Survey (Bight'13), in addition to standard USEPA testing protocols, specific testing guidelines provided by SCCWRP for Bight'13 were followed for this testing event (SCCWRP 2013). Furthermore, toxicology and analytical laboratories were required to participate in laboratory intercalibration testing to ensure standard practices between labs and comparability of data generated throughout the region. Nautilus passed intercalibration testing for all Bight '13 toxicity tests conducted. This report summarizes results of the July 2013 sampling events.

Thirty sediment samples were collected throughout the two Ports and were evaluated using two test methods. These included a:

- 10-Day amphipod (*Eohaustorius estuarius*) solid-phase sediment test, and
- 48-hour mussel (*Mytilus galloprovincialis*) larval survival and development sediment-water interface test

2.0 MATERIALS AND METHODS

The methods employed to evaluate sediment toxicity are described below.

2.1 Sample Collection, Receipt, and Preparation

Test site sediments for the Harbor Toxics TMDL program were collected between July 10, 2013 and July 13, 2013 by AMEC personnel. Approximately five liters of sediment were provided from each site, in five one-liter (L) high density polyethylene plastic containers. Samples were delivered in coolers with wet ice to Nautilus by AMEC personnel from July 11, 2013 through July 13, 2013. Upon receipt, contents of coolers were verified against chain of custody forms. Temperatures were measured and recorded on a sample check-in form. All samples were stored at $4 \pm 2^{\circ}\text{C}$ in the dark until used for testing. Copies of chain of custody forms and sample check-in data sheets are provided in Appendix A.

For the entire testing program, each sample was sieved through a 1-mm Nitex® mesh screen prior to testing to remove potential native organisms and ensure reliable test organism recovery. Following homogenization and sieving, interstitial pore water samples were collected and

analyzed for total ammonia content. Prior to testing, each sample was thoroughly homogenized.

2.2 Toxicity Test Methodology

Test methods and acceptability criteria for the amphipod test and the mussel test are described in Tables 1 and 2, respectively. Additional guidance for the regional program was developed by SCCWRP in collaboration with participating laboratories, and is outlined in the *Bight '13 Toxicity Testing Manual* (SCCWRP 2013).

The solid-phase amphipod tests included two concurrent controls. The laboratory control sediment consisted of coarse sand collected at the amphipod collection site along with each batch of organisms. The amphipod collection site is composed mostly of sand, with minimal silt and clay fractions. Thus, an additional “fine grain size” control sediment was tested to better represent the common fine sediments found within bays and harbors. The fine grain size control sediment was collected in the Sail Bay area of Mission Bay in San Diego, California, which is a relatively contaminant free area with no power boats or large marinas, and this sediment has been used as a fine-grain control at Nautilus for several years. One large batch of fine grain sediment was collected by AMEC on July 9, 2013 and distributed to all participating laboratories for testing throughout the Bight '13 program.

Table 1. Toxicity Test Methodology and QA/QC Requirements for the 10-day Solid Phase Amphipod Toxicity Test

| | |
|----------------------------------|--|
| Test organism | Marine Amphipod – <i>Eohaustorius estuarius</i> |
| Test organism source | Northwestern Aquatic Sciences; Newport, OR |
| Test organism size at initiation | 3-5 mm |
| Test duration; endpoint | 10 days; survival |
| Test solution renewal | None |
| Feeding | Prior to test initiation only |
| Test chamber | 1-L glass jar |
| Sediment depth | 2 cm |
| Overlying water volume | 800 mL |
| Test temperature | 15 ± 2°C |
| Water quality monitoring | Overlying water: pH, temperature, salinity, and dissolved oxygen daily, total ammonia on days 0 and 10. Interstitial water: pH, salinity, and total ammonia day 0. |
| Overlying water | Natural seawater collected off the SIO Pier in La Jolla, CA. 20µm filtered. Seawater was diluted to 32 ppt with deionized water prior to testing. |
| Number of organisms/chamber | 20 |
| Number of replicates | 5, plus 1 surrogate test chamber for water quality readings |
| Daily Observations | Observations were recorded daily in each replicate for emergence from sediment, aeration, mortality, and sediment appearance. |
| Negative controls | 1) <u>Lab control</u> : 0.5 mm sieved sand collected near organism home site (two lab controls per test batch; one per 7-8 samples); 2) <u>Fine Grain Size Control</u> : sediment collected in Sail Bay, Mission Bay, CA (one fine grain control per test batch) |
| Photoperiod | Continuous (24 hour) light for the sediment test; continuous dark for the reference toxicant water only test |
| Aeration | Continuous (3-4 bubbles per second) |
| Test Protocol(s) | SCCWRP 2013 and USEPA 600/R-94/025 (EPA 1994) |
| Test acceptability criterion | ≥ 90 percent mean survival in the lab control |
| Reference toxicant test | Ammonium chloride |

cm – centimeter
°C – degrees Celsius
L - Liter
mL – milliliter
mm - millimeter

ppt – parts per thousand

Table 2. Toxicity Test Methodology and QA/QC Requirements for Sediment Water Interface Bivalve Larvae Development Toxicity Tests

| | |
|------------------------------------|--|
| Test organism | Mediterranean mussel - <i>Mytilus galloprovincialis</i> |
| Test organism source | Taylor Shellfish; Shelton, WA |
| Test duration, endpoint | 48 hours, survival and development- reported as percent normal-alive (PNA) mussel embryos |
| Test solution renewal | None |
| Feeding | None |
| Test chamber | 250-mL polycarbonate screen tube inside 1-L glass jar |
| Screen Size | 25-micron |
| Test temperature | 15 ± 1°C test-wide mean, 15 ± 3°C instantaneous |
| Sediment depth | 4 cm |
| Overlying water volume | 300 mL |
| Overlying water quality monitoring | pH, temperature, salinity, and dissolved oxygen daily, total ammonia on days 0 and 2 |
| Overlying water | 1-µm filtered natural seawater collected off the SIO Pier in La Jolla, CA. Seawater was diluted to 32 ppt with deionized water prior to testing. |
| Number of organisms/chamber | ~300 larvae |
| Number of replicates | 5, plus 1 surrogate chamber for daily water quality |
| Negative control | Water only with screen tube (2 lab controls; one per 7-8 samples) |
| Photoperiod | 16 hours light/8 hours dark |
| Aeration | Continuous (1-2 bubbles per second) |
| Test Protocol | SCCWRP 2013, USEPA 1995, and Anderson et al. 1996 |
| Test acceptability criterion | Mean control percent normal-alive ≥70 |
| Reference toxicant test | Ammonium chloride |

cm – centimeter
°C – degrees Celsius
L - Liter
mL – milliliter
ppt – parts per thousand

SIO – Scripps Institution of Oceanography
µm - micrometer
USEPA – United States Environmental Protection Agency

2.3 Statistical Analyses

For the amphipod tests, survival in each sample was compared to survival in the lab control. Amphipod survival data, expressed as a proportion, were arcsine square-root transformed prior to analysis to normalize the distribution of the data and satisfy statistical assumptions for analysis. Statistical assumptions were evaluated prior to analysis using Bartlett's Test or F-test for differences in variance and D'Agostino Pearson Omnibus test for normality. Unpaired *t*-test comparisons were performed to identify significant differences between the laboratory control and individual samples. If parametric assumptions were not met, the data were initially tested with Kruskal-Wallis test, followed by the Mann-Whitney U-test, if *post-hoc* tests were warranted.

For the mussel tests percent normal-alive (# normal embryos/ initial # of embryos) in each sample was compared to percent normal-alive in the lab control. Following guidance from SCCWRP, unpaired *t*-test comparisons assuming unequal variance were performed with a Welch's correction on the untransformed data for each sample in comparison to the lab control. For a test where outliers are suspected among replicates, the Dixon's Test for Detecting Outliers was used according to USEPA guidance (USEPA 2000) to statistically determine whether or not the data points are outliers. As a general guideline, data were not removed from analysis unless there is corroborating evidence, beyond the statistical analysis, that indicated that a given replicate was anomalous.

Statistical analyses of test data were performed using GraphPad Prism, Version 4.02. Statistical analyses for the reference toxicant data were performed using Comprehensive Environmental Toxicity Information System Software (CETIS™), version 1.8.4.23 (Tidepool Scientific Software 2012).

2.4 Testing Schedule

The 30 samples were tested in two batches initiated between July 16 and 23, 2013. All tests were initiated within the two-week holding time specified in for the Bight program. A summary of the sample identification numbers, sample collection and receipt dates, and testing schedule is provided in Table 3.

Table 3. Toxicity Testing Schedule

| Test Batch | Sample ID B13-xxxx | Sample Collection Date | Sample Receipt Date | Amphipod Test Initiation Date | Mussel Test Initiation Date |
|------------|--------------------|------------------------|---------------------|-------------------------------|-----------------------------|
| Batch #1 | 8374 | 7/10/13 | 7/11/13 | 7/16/13 | 7/16/13 |

| TMDL-1CH | 7/11/13 | 7/12/13 | | | |

3.0 RESULTS

All lab controls for both species met test acceptability criteria as defined in the Bight '13 Toxicity Testing Manual. Batch #1 results for both species tested are presented in Figure 1, and for Batch #2 in Figure 2. A summary of toxicity test results are discussed below and detailed summaries, statistical results, and raw data sheets are provided in Appendix B (amphipods) and C (mussels).

3.1 Batch #1

Solid-Phase Tests

Mean survival of amphipods in the Batch #1 sediment laboratory controls was 98 and 99 percent for Lab Control #1 and #2, respectively. Mean survival in the Fine Grain Size Control was 99 percent, indicating that the organisms were not particularly sensitive to fine grain size during this round of testing. Little to no emergence or avoidance of the sediment by amphipods was noted for any of the sediments tested in Batch #1. Mean amphipod survival in the seven test sites associated with Lab Control #1 ranged from 85 to 98 percent. For the batch associated with Lab Control #1, mean survival in one sample (B13-8347; 85 percent) was found to be statistically reduced from the lab control.

Mean amphipod survival in the eight test sites associated with Lab Control #2 ranged from 89 to 98 percent; seven of the eight samples were statistically decreased from the lab control. However, only one sample (B13-8322; 89 percent survival) resulted in mean survival below 90 percent. Lab Control #2 had little variability among replicates, which resulted in an increase in statistical power to detect small differences as significant.

Sediment-Water Interface Tests

For Batch #1, mean percent normal-alive mussel embryos in the water only laboratory controls was 70.6 percent for Lab Control #1 and 70.7 percent for Lab Control #2. Mean normal-alive mussel embryos in the seven test sites associated with Lab Control #1 ranged from 58.1 to 72.8 percent; four of these resulted in a statically significant decrease from control (B13-8374, B13-8371, B13-8382 and B13-8347).

Mean normal-alive mussel embryos in the eight test sites associated with Lab Control #2 ranged from 59.5 to 70.5 percent; two of these resulted in a statically significant decrease from control (B13-8349 and B13-8308).

3.2 Batch #2

Solid-Phase Tests

Mean survival of amphipods in the Batch #2 sediment laboratory controls was 98 and 99 percent for Lab Control #1 and #2, respectively. Mean survival in the Fine Grain Size Control was 97 percent, indicating that the organisms were not particularly sensitive to fine grain size during this round of testing. Mean amphipod survival in the seven test sites associated with Lab Control #1 ranged from 83 to 97 percent. For the batch associated with Lab Control #1, mean survival in five samples was found to be statistically reduced from the lab control. Two of these resulted in mean survival below 90 percent (B13-8401; 86 percent, and TMDL-4CS; 83 percent). Additionally, daily observations revealed that several amphipods were emerging (i.e. avoiding the sediment) from all five replicates of the TMDL-4CS sample and were found swimming at the water surface. Each day, any amphipods that were observed out of the sediment were gently pushed down from the water surface until they re-burrowed in the sediment. Emergence was observed in some other samples as well, but only a few animals in one or two replicates. Daily observation datasheets are available with raw bench data in Appendix B.

Mean amphipod survival in the eight test sites associated with Lab Control #2 ranged from 77 to 97 percent. For the batch of samples associated with Lab Control #2, six of the eight samples were statistically decreased from the lab control. All six of these resulted in mean survival less than 90 percent (B13-8340, TMDL-2FH, B13-8302, B13-8365, B13-8306, and TMDL-1CH).

Sediment-Water Interface Tests

For Batch #2, mean percent normal-alive mussel embryos in the water only laboratory controls was 75.0 percent for Lab Control #1 and 74.8 percent for Lab Control #2. Mean normal-alive mussel embryos in the seven test sites associated with Lab Control #1 ranged from 60.3 to 90.2 percent; none of these resulted in a statically significant effect from control.

Mean normal-alive mussel embryos in the eight test sites associated with Lab Control #2 ranged from 67.4 to 95.4 percent; none of which resulted in a statically significant effect from control.

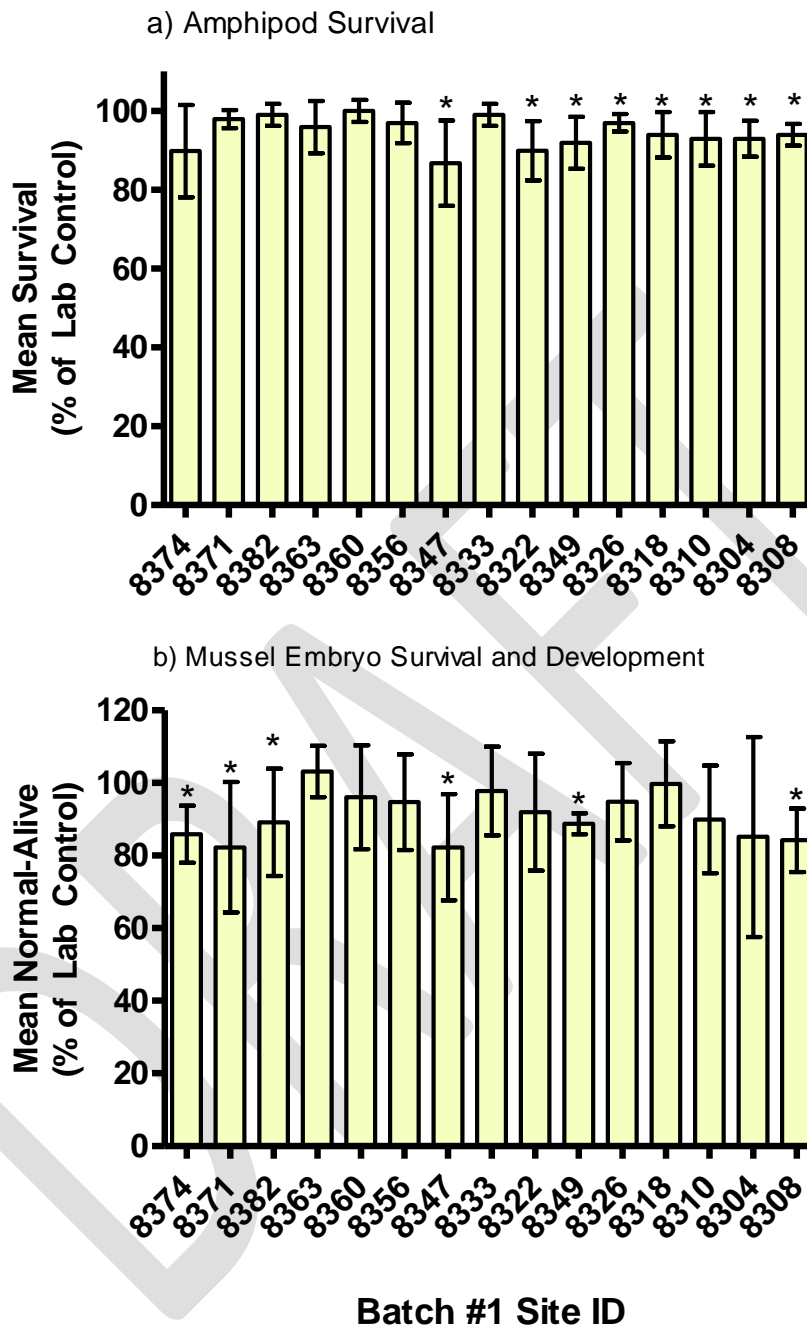

Figure 1. Results for the POLA/POLB Bight 13' Batch #1 Toxicity Tests
 a) Amphipod 10-day survival in the solid-phase sediment test, and b) mussel embryo percent normal-alive in the sediment water interface test. Results are presented as percent of lab control (mean ± standard deviation of the mean (SD)). *An asterisk indicates a statistically significant decrease compared to the lab control (p < 0.05).

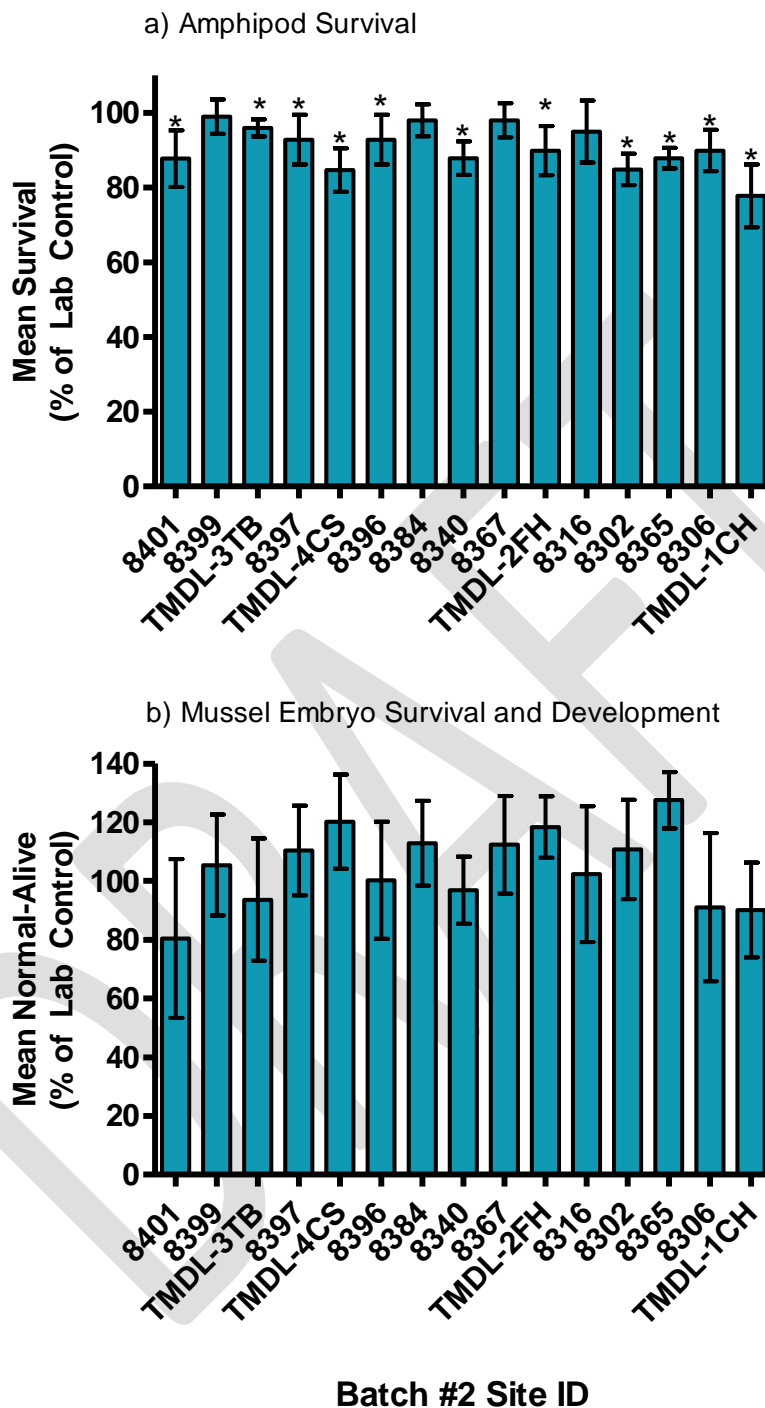

Figure 2. Results for the POLA/POLB Bight 13' Batch #2 Toxicity Tests

a) Amphipod 10-day survival in the solid-phase sediment test, and b) mussel embryo percent normal alive in the sediment water interface test. Results are presented as percent of lab control (mean \pm standard error of the mean (SD)). *An asterisk indicates a statistically significant decrease compared to the lab control ($p < 0.05$).

4.0 QUALITY ASSURANCE

All of the data presented have been thoroughly reviewed and are deemed acceptable for reporting in accordance with relevant protocols and Nautilus' internal QA/QC program. Any deviations with respect to test conditions and acceptability criteria are summarized below. All were determined to be minor with no impact on the final data or its interpretation. A list of laboratory qualifier codes can be found in Appendix D.

4.1 Sample Receipt, Handling and Holding Time

Samples were received and processed according to protocol described in previous sections. All tests were initiated within the two week holding time outlined for the Bight'13 program.

All samples were received on ice. Receipt temperatures ranged from 1.1 to 12.6°C. Upon receipt, all samples were moved to cold storage and held at $4 \pm 2^\circ\text{C}$ in the dark.

All ammonia values were below any reported thresholds for the test species with the exception of one sample at 48 hours in the mussel test (Tang 1997; USEPA 1994). Sample B13-8360 in Batch #1 had a calculated overlying unionized ammonia value of 0.050 mg/L, at the unpublished threshold value provided by the Marine Pollution Studies Laboratory. However, the total values of 2.1 mg/L remained below the threshold value given in the SCCWRP Technical Report 582 of 4.0 mg/L (SCCWRP 2009). Also note that the unionized value for sample B13-8360 was below the calculated no observed effect concentration (NOEC) for development of 0.090 mg/L for the concurrent reference toxicant test. Total and unionized ammonia tables (Appendix Tables E-1 through E-3) and all calculation and raw ammonia data sheets can be found in Appendix E.

4.2 Solid-Phase Toxicity Tests

All water quality parameters were within required ranges as defined by the test protocol for the entirety of the test.

4.3 Sediment-Water Interface Tests

All water quality parameters were within required ranges as defined by the test protocol for the entirety of the test. A few replicates were calculated as outliers using Dixon's test and they are noted in the summary table in Appendix B; however no outliers were excluded in the analysis for these tests.

4.4 Reference Toxicant Tests

Reference toxicant test results are provided in Appendix F. All reference toxicant tests met test acceptability criteria. However, median lethal effect (LC_{50} , IC_{50}) concentration values for the *Eohaustorius* and *Mytilus* reference toxicant tests (respectively) were above \pm two standard deviations of internal control chart means for both species in Batch #1, and for *Eohaustorius* only during Batch #2 testing.

Project Name: POLA/POLB Harbor Toxics TMDL and Bight '13
 Physis Project ID: 1307001-001

Dear Chris,

Enclosed are the analytical results for samples submitted to PHYSIS Environmental Laboratories, Inc. (PHYSIS) on 7/13/2013. A total of 32 samples were received for analysis in accordance with the attached chain of custody (COC). Per the COC, the samples were analyzed for:

| Conventionals |
|---|
| Total Sulfides by Plumb, 1981/TERL |
| Percent Solids by SM 2540B |
| Ammonia as N by SM 4500-NH ₃ D |
| Elements |
| Trace Metals by EPA 6020 |
| Trace Mercury by EPA 245.7 |
| Total Phosphorus by EPA 6020 |
| Organics |
| Toxaphene w/ OCPs by EPA 8270C-NCI |
| Synthetic Pyrethroid Pesticides by EPA 8270C-NCI |
| Polynuclear Aromatic Hydrocarbons by EPA 8270C |
| PBDE Congeners by EPA 8270C-NCI |
| Organochlorine Pesticides & PCB Congeners/Aroclors by EPA 8270C |
| Fipronil & Degradates by EPA 8270C-NCI |
| Subcontract |
| Total Organic Carbon by SM 5310 B |
| Total Nitrogen by SM 4500-N |

Analytical results in this report apply only to samples submitted to PHYSIS in accordance with the COC and are intended to be considered in their entirety.

Please feel free to contact me at any time with any questions. PHYSIS appreciates the opportunity

to provide you with our analytical and support services.

Regards,

Misty Mercier

QUALITY ASSURANCE SUMMARY

LABORATORY BATCH: Physis' QM defines a laboratory batch as a group of 20 or fewer project samples of similar matrix, processed together under the same conditions and with the same reagents. QC samples are associated with each batch and are used to assess the validity of the sample analyses.

PROCEDURAL BLANK: Laboratory contamination introduced during method use was assessed through the analysis of procedural blanks at a minimum frequency of one per batch. Physis' QM requires that all procedural blanks be below 10 times the MDL and all detectable constituents in the procedural blanks be flagged in the project sample results with a B qualifier.

ACCURACY: Accuracy of analytical measurements is the degree of closeness based on percent recovery calculations between measured values and the actual or true value and includes a combination of reproducibility error and systematic bias due to sampling and analytical operations. Accuracy of the project data was indicated by analysis of MS, BS, LCS, LCM, CRM, and/or surrogate spikes on a minimum frequency of one per batch. Physis' QM requires that 95% of the target compounds greater than 10 times the MDL be within the specified acceptance limits.

PRECISION: Precision is the agreement among a set of replicate measurements without assumption of knowledge of the true value and is based on RPD calculations between repeated values. Precision of the project data was determined by analysis of replicate MS₁/MS₂, BS₁/BS₂, LCS₁/LCS₂, LCM₁/LCM₂, CRM₁/CRM₂, surrogate spikes and/or replicate project sample analysis (R₁/R₂) on a minimum frequency of one per batch. Physis' QM requires that for 95% of the compounds greater than 10 times the MDL, the percent RPD should be within the specified acceptance range.

MATRIX SPIKES: MS samples were employed to assess the effect a particular project sample matrix has on the accuracy of a measurement. It is prepared by adding a known amount of the target analyte(s) to an aliquot of the project sample. Matrix spikes indicate the bias of analytical measurements due to chemical interferences inherent in the sample matrix. If the matrix spike recovery does not fall within the specified acceptance limits, it may be an indication of sample matrix interference in the specific project sample used for the MS. Intrinsic target analyte concentration in the specific project sample can also significantly impact MS recovery.

BLANK SPIKES: BS demonstrates performance of the preparation and analytical methods on a clean matrix void of potential matrix related interferences. The BS is performed in laboratory deionized water, making these recoveries a better indicator of the efficiency of the laboratory method per se.

CERTIFIED REFERENCE MATERIALS: CRMs are pre-homogenized materials of various matrices for which analytical information has been determined and certified by a recognized authority. These are used to provide a quantitative assessment of the accuracy of a preparation and analytical method. CRMs are analyzed to provide evidence that the laboratory method produces results that are comparable to those obtained by an independent organization.

SURROGATES: Where CRMs are unavailable, target analyte recovery can be assessed by monitoring added surrogate compounds/elements. A surrogate is a pure analyte unlikely to be found in any project sample and most often used with organic analytical procedures. Percent recovery is calculated for each surrogate and is used to monitor method performance within each discrete sample and is indicative of the procedure's ability to recover the actual analytes of interest.

HOLDING TIME: Method recommended holding times are the length of time a project sample can be stored

under specific conditions after collection and prior to analysis without significantly affecting the analyte's concentration. Holding times can be extended if preservation techniques are employed to reduce biodegradation, volatilization, oxidation, sorption, precipitation, and other physical and chemical processes. Physis' QM requires that all samples analyzed beyond the method recommended holding time be flagged in the sample results with an H qualifier.

TOTAL/DISSOLVED FRACTION: In some instances, the results for the dissolved fraction may be higher than the total fraction for a particular analyte (e.g. trace metals). This is typically caused by the analytical variation for each result and indicates that the target analyte is primarily in the dissolved phase, within the sample.

PHYSIS QUALIFIER CODES

| CODE | DEFINITION |
|-------------|---|
| * | see Case Narrative |
| ND | analyte not detected at or above the MDL |
| B | analyte was detected in the procedural blank greater than 10 times the MDL |
| E | analyte concentration exceeds the upper limit of the linear calibration range, reported value is estimated |
| H | sample received and/or analyzed past the recommended holding time |
| J | analyte was detected at a concentration below the RL and above the MDL, reported value is estimated |
| N | insufficient sample, analysis could not be performed |
| M | analyte was outside the specified recovery and/or RPD acceptance limits due to matrix interference. The associated B/BS were within limits, therefore the sample data was reported without further clarification |
| SH | analyte concentration in the project sample exceeded the spike concentration, therefore MS recovery and/or RPD acceptance limits do not apply |
| SL | analyte results for R1 and/or R2 were lower than 10 times the MDL, therefore RPD acceptance limits do not apply |
| NH | project sample was heterogeneous and sample homogeneity could not be readily achieved using routine laboratory practices, therefore MS recovery and/or RPD were outside the specified acceptance limits |
| R | Physis' QM allows for 5% of the target compounds greater than 10 times the MDL to be outside the specified acceptance limits for precision and/or accuracy. This is often due to random error and does not indicate any significant problems with the analysis of these project samples |

CASE NARRATIVE

QUALIFIER NOTES

In addition to the use of analyte specific Physis Qualifier Codes where applicable, the following were also noted.

PAHS SRM: One LMW PAH (Naphthalene) was below the specified acceptance limits in one or more SRM 1944 as a result of excessive vacuum of the rotovap during sample concentration prior to analysis.

ELEMENTS CRM: Five elements, Aluminum (Al), Antimony (Sb), Beryllium (Be), Chromium (Cr) and Iron (Fe) were above the specified acceptance limits in one or more CRM - RTC 016-050 and/or CRM - ERA 540. This occurred as a result of a more rigorous digestion employed by Physis, which causes a higher yield for some lithogenous elements. These values are in agreement with past internal results for CRM - RTC 016-050 and CRM - ERA 540.

Re: IIRMES Project ID: 119-13-11
Physis Environmental Laboratories, In Project ID: 1307001-001

ATTN: Misty Mercier

IIRMES is pleased to provide you with the enclosed analytical data report for your 1307001-001 project. According to the chain-of-custody, 32 samples were received intact at IIRMES on 8/8/2013. Per your instructions, the samples were analyzed for:

- Total Nitrogen Using Method SM 5310 B
- Total Organic Carbon Using Method SM 5310 B

Please don't hesitate to call if you have any questions and thank you very much for using our laboratory for your analytical needs.

Regards,
Alexander Long

Quality Assurance Summary

Laboratory Batch: The IIRMES Quality Manual (QM) defines a laboratory batch as a group of 20 or fewer samples of similar matrix that are processed together under the same conditions using the same reagents. QC samples are associated with each batch and are used to assess the validity of the sample analyses.

Procedural Blank: Potential laboratory contamination during sample processing and analysis is monitored through the analysis of procedural blanks at a minimum frequency of 1 per batch. The IIRMES QM requires that all measurable procedural blank constituents be less than 10x the MDL and that any detectable constituents be flagged in the project sample results with a *B* qualifier.

Accuracy: Accuracy of the project data is indicated by the analysis of a combination of blank spikes (BS), matrix spikes (MS), laboratory control spikes (LCS), certified reference materials (CRM), and/or surrogate spikes at a minimum frequency of 1 per batch. The IIRMES QM requires that 95% of the compounds greater than 10x the MDL be within the specified acceptance limits.

Precision: Precision of the project data is determined by the analysis of duplicate matrix spikes, blank spikes, and/or duplicate test sample analysis on a minimum frequency of 1 per batch. The IIRMES QM requires that for 95% of the compounds greater than 10x the MDL, the relative percent difference (RPD) be within the specified acceptance range.

Holding Time: The IIRMES QM requires that all samples be processed and analyzed within the method specific recommended holding times. Those sample analyses falling outside that specified holding time will be flagged in the sample results with a *H*.

Total/Dissolved Fraction: In some instances the results for the dissolved fraction may be higher than the total fraction for a particular analyte. This is typically caused by the corresponding analytical variation for each result and indicates the target analyte is primarily in the dissolved phase of the sample.

Institute for Integrated Research in Materials, Environments, and Society

IIRMES Qualifier Codes

| <u>Code</u> | <u>Definition</u> |
|--------------------|--|
| ND | Analyte not detected at or above the listed MDL |
| B | Analyte was detected in the associated procedural blank |
| H | Sample was received and/or analyzed past the recommended holding time |
| J | Analyte was detected at a concentration above the MDL but below the RL, therefore the reported value is estimated |
| N | Insufficient sample, analysis could not be performed |
| M | Analyte was outside the specified recovery and/or RPD acceptance limits due to matrix interference. The associated blank spikes were within limits, therefore the sample data was reported without further clarification |
| Q1 | Analyte concentration in the sample exceeded the spike concentration, therefore the MS recovery and/or RPD limits do not apply |
| Q2 | Analyte results for R1 and/or R2 were lower than 10x the MDL, therefore the RPD limits do not apply |
| NH | Sample was heterogeneous and sample homogeneity could not be readily achieved using routine laboratory procedures, therefore the corresponding RPD was outside the specified acceptance limits. |

AMEC - Chemical Analyte List for POLA/POLB Bight '13 Sediment Sampling

****26 Bight '13 Samples ONLY****

General Chemistry

| Analyte | Analysis Method | Screening Target Reporting Units |
|----------------------|--------------------------|----------------------------------|
| Total Solids | 981.4048 (981.4) | % DW |
| Total Organic Carbon | 9999 | % DW |
| Total Oil | 99999 | % DW |
| Total Phosphate | 991.34 (991.34) (991.34) | µg/g |
| Total Nitrogen | 991.0001 (991.0001) | µg/g |
| Ammonia | 991.0001 (991.0001) | µg/g |
| Chloride | 12694.912 | µg/g |

PAHs

| Analyte | Analysis Method | Screening Target Reporting Units |
|--------------------------|-----------------|----------------------------------|
| Acenaphthene | 4270C8100-0M | 20 µg/g |
| Acenaphthylene | 4270C8100-0M | 20 µg/g |
| Anthracene | 4270C8100-0M | 20 µg/g |
| Benzo[a]anthracene | 4270C8100-0M | 20 µg/g |
| Benzo[b]fluoranthene | 4270C8100-0M | 20 µg/g |
| Benzo[k]fluoranthene | 4270C8100-0M | 20 µg/g |
| Benzo[a]pyrene | 4270C8100-0M | 20 µg/g |
| Benzo[e]pyrene | 4270C8100-0M | 20 µg/g |
| Benzo[g]perylene | 4270C8100-0M | 20 µg/g |
| Benzo[h]perylene | 4270C8100-0M | 20 µg/g |
| Benzo[i]perylene | 4270C8100-0M | 20 µg/g |
| Benzo[ghi]perylene | 4270C8100-0M | 20 µg/g |
| Chrysene | 4270C8100-0M | 20 µg/g |
| Fluorene | 4270C8100-0M | 20 µg/g |
| Fluoranthene | 4270C8100-0M | 20 µg/g |
| Indeno[1,2,3-cd]perylene | 4270C8100-0M | 20 µg/g |
| Naphthalene | 4270C8100-0M | 20 µg/g |
| Phenanthrene | 4270C8100-0M | 20 µg/g |
| Pyrene | 4270C8100-0M | 20 µg/g |
| 1-Methylanthracene | 4270C8100-0M | 20 µg/g |
| 2-Methylanthracene | 4270C8100-0M | 20 µg/g |
| 1-Methylphenanthrene | 4270C8100-0M | 20 µg/g |
| 2-Methylphenanthrene | 4270C8100-0M | 20 µg/g |
| 1-Methylbenzo[a]pyrene | 4270C8100-0M | 20 µg/g |
| 2-Methylbenzo[a]pyrene | 4270C8100-0M | 20 µg/g |

Pesticidal Pesticides

| Analyte | Analysis Method | Screening Target Reporting Units |
|--------------|---------------------|----------------------------------|
| Azinphos | 874.0113 (874.0113) | µg/g |
| Alachlor | 874.0113 (874.0113) | µg/g |
| Alfomet | 874.0113 (874.0113) | µg/g |
| Carbofent | 874.0113 (874.0113) | µg/g |
| Carbofendim | 874.0113 (874.0113) | µg/g |
| Diazinon | 874.0113 (874.0113) | µg/g |
| Disulfoton | 874.0113 (874.0113) | µg/g |
| Endosulfan | 874.0113 (874.0113) | µg/g |
| Fenitrothion | 874.0113 (874.0113) | µg/g |
| Fenprophos | 874.0113 (874.0113) | µg/g |
| Fluazifluor | 874.0113 (874.0113) | µg/g |
| Flurothion | 874.0113 (874.0113) | µg/g |
| Glyphosate | 874.0113 (874.0113) | µg/g |
| Methidathion | 874.0113 (874.0113) | µg/g |
| Phosalone | 874.0113 (874.0113) | µg/g |
| Permethrin | 874.0113 (874.0113) | µg/g |
| Propoxur | 874.0113 (874.0113) | µg/g |
| Terbufos | 874.0113 (874.0113) | µg/g |

Metals

| Analyte | Analysis Method | Screening Target Reporting Units |
|-----------|-----------------|----------------------------------|
| Arsenic | 922500108 | µg |
| Cadmium | 922500108 | µg/g |
| Copper | 922500108 | µg/g |
| Lead | 922500108 | µg/g |
| Manganese | 922500108 | µg/g |
| Mercury | 922500108 | µg/g |
| Chromium | 922500108 | µg/g |
| Coarse | 922500108 | µg/g |
| Iron | 922500108 | µg |
| Lead | 922500108 | µg/g |
| Nickel | 922500108 | µg/g |
| Selenium | 922500108 | µg/g |
| Silver | 922500108 | µg/g |
| Zinc | 922500108 | µg/g |

NOEs

| Analyte | Analysis Method | Screening Target Reporting Units |
|---------|-----------------|----------------------------------|
| NOE-01 | 8272C1M1 | 17 µg/g |
| NOE-02 | 8272C1M2 | 21 µg/g |
| NOE-03 | 8272C1M3 | 81 µg/g |
| NOE-04 | 8272C1M4 | 21 µg/g |
| NOE-05 | 8272C1M5 | 21 µg/g |
| NOE-06 | 8272C1M6 | 21 µg/g |
| NOE-07 | 8272C1M7 | 21 µg/g |
| NOE-08 | 8272C1M8 | 21 µg/g |
| NOE-09 | 8272C1M9 | 21 µg/g |
| NOE-10 | 8272C1M10 | 21 µg/g |
| NOE-11 | 8272C1M11 | 21 µg/g |
| NOE-12 | 8272C1M12 | 21 µg/g |
| NOE-13 | 8272C1M13 | 21 µg/g |
| NOE-14 | 8272C1M14 | 21 µg/g |
| NOE-15 | 8272C1M15 | 21 µg/g |

Chlorinated Hydrocarbons

| Analyte | Analysis Method | Screening Target Reporting Units |
|-------------------------------|-----------------|----------------------------------|
| Chlorobenzene | 881A | 0.2 µg/g |
| 1,2-Dichlorobenzene | 881A | 0.2 µg/g |
| 1,4-Dichlorobenzene | 881A | 0.2 µg/g |
| 1,1-Dichloroethane | 881A | 0.2 µg/g |
| 1,1,1-Trichloroethane | 881A | 0.2 µg/g |
| 1,1,2-Trichloroethane | 881A | 0.2 µg/g |
| 1,2,3-Trichlorobenzene | 881A | 0.2 µg/g |
| 1,2,4-Trichlorobenzene | 881A | 0.2 µg/g |
| 1,3,5-Trichlorobenzene | 881A | 0.2 µg/g |
| 1,1,1,2-Tetrachloroethane | 881A | 0.2 µg/g |
| 1,1,1,2,2-Pentachloroethane | 881A | 0.2 µg/g |
| 1,1,2,2-Tetrachloroethane | 881A | 0.2 µg/g |

AMEC - Chemical Analyte List for POLA/POLB Bight '13 Sediment Sampling

****6 TMDL Sites ONLY****

General Chemistry

| Analyte | Analysis Method | Assessed Target Reservoir Limit |
|------------------------|-----------------|---------------------------------|
| Total Solids | MS 2001 (24) B | 0.1% |
| Total Dissolved Carbon | 300 | 0.1% |
| Total Phosphorus | 30000 | 0.1% |
| Ammonia | MS 4001 (4) | 0.2 mg/L |
| Sulfide | MS 4134 (24) J | 0.3 mg/L |

Metals

| Analyte | Analysis Method | Assessed Target Reservoir Limit |
|----------------------------|-----------------|---------------------------------|
| Barium | MS 3002 (28) | NA |
| Cadmium | MS 3003 (28) | 10 mg/L |
| Chromium | MS 3004 (28) | 1.0 mg/L |
| Copper | MS 3005 (28) | NA |
| Lead | MS 3006 (28) | 0.2 mg/L |
| Nickel | MS 3007 (28) | 0.2 mg/L |
| Selenium | MS 3008 (28) | 0.1 mg/L |
| Zinc | MS 3009 (28) | 0.2 mg/L |
| Mercury | MS 3010 (28) | 0.1 mg/L |
| Vanadium | MS 3011 (28) | 0.1 mg/L |
| Manganese | MS 3012 (28) | 0.1 mg/L |
| Iron | MS 3013 (28) | NA |
| Molybdenum | MS 3014 (28) | 0.1 mg/L |
| Silver | MS 3015 (28) | 0.01 mg/L |
| Strontium | MS 3016 (28) | 0.1 mg/L |
| Thallium | MS 3017 (28) | 0.1 mg/L |
| Antimony | MS 3018 (28) | 0.1 mg/L |
| Uranium | MS 3019 (28) | 0.1 mg/L |
| Bismuth | MS 3020 (28) | 0.1 mg/L |
| Fluoride | MS 3021 (28) | 0.1 mg/L |
| Chloride | MS 3022 (28) | 0.1 mg/L |
| Sulfate | MS 3023 (28) | 0.1 mg/L |
| Calcium | MS 3024 (28) | 0.1 mg/L |
| Magnesium | MS 3025 (28) | 0.1 mg/L |
| Potassium | MS 3026 (28) | 0.1 mg/L |
| Sodium | MS 3027 (28) | 0.1 mg/L |
| Ammonium | MS 3028 (28) | 0.1 mg/L |
| Hydroxide | MS 3029 (28) | 0.1 mg/L |
| Phosphate | MS 3030 (28) | 0.1 mg/L |
| Nitrate | MS 3031 (28) | 0.1 mg/L |
| 3,3-Dibromodiphenylmethane | MS 3032 (28) | 0.1 mg/L |
| 1-Methylpiperazine | MS 3033 (28) | 0.1 mg/L |
| 3-Methylimidazole | MS 3034 (28) | 0.1 mg/L |
| 1,4-Dioxane | MS 3035 (28) | 0.1 mg/L |
| 1,4-Dioxolane | MS 3036 (28) | 0.1 mg/L |

PCB Congeners

| Analyte | Analysis Method | Assessed Target Reservoir Limit |
|---------|-----------------|---------------------------------|
| PCB-1 | MS 3037 (28) | 0.1 mg/kg |
| PCB-2 | MS 3038 (28) | 0.1 mg/kg |
| PCB-3 | MS 3039 (28) | 0.1 mg/kg |
| PCB-4 | MS 3040 (28) | 0.1 mg/kg |
| PCB-5 | MS 3041 (28) | 0.1 mg/kg |
| PCB-6 | MS 3042 (28) | 0.1 mg/kg |
| PCB-7 | MS 3043 (28) | 0.1 mg/kg |
| PCB-8 | MS 3044 (28) | 0.1 mg/kg |
| PCB-9 | MS 3045 (28) | 0.1 mg/kg |
| PCB-10 | MS 3046 (28) | 0.1 mg/kg |
| PCB-11 | MS 3047 (28) | 0.1 mg/kg |
| PCB-12 | MS 3048 (28) | 0.1 mg/kg |
| PCB-13 | MS 3049 (28) | 0.1 mg/kg |
| PCB-14 | MS 3050 (28) | 0.1 mg/kg |
| PCB-15 | MS 3051 (28) | 0.1 mg/kg |
| PCB-16 | MS 3052 (28) | 0.1 mg/kg |
| PCB-17 | MS 3053 (28) | 0.1 mg/kg |

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

CASE NARRATIVE

Eurofins Calscience Work Order No.: 14-10-1157
Project ID: GWMA – TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the tissue samples.

Sample Condition on Receipt

Sixty-nine tissue samples were received on 29 September, 2014, and fifty-seven tissue samples were received on 30 September, 2014 (under ECI WO No. 14-09-2314 and 14-09-2442). The samples were transferred to the laboratory in an ice-chest on ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory ranged from 3.3-3.6°C. All samples were given laboratory identification numbers and held in freezers pending further instructions. On 15 October, 2014, the samples were re-labeled and logged into the Laboratory Information Management System (LIMS) based on the compositing instructions provided by the client.

Tests Performed

Percent Moisture by ASTM D-2216 (M)
Chlorinated Pesticides by EPA 8270C SIM
Toxaphene by EPA 8081A
PCB Congeners by EPA 8270C SIM
Percent Lipids by MeCl₂/NOAA 1993a

Data Summary

All samples were homogenized prior to preparation and analysis.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, “J” flags were reported.

Method Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Several of the pesticide LCS recoveries were below the 50-150% criteria specified in the SAP. However, the recovery was within ECI's control limits.

Matrix Spikes

Matrix spike analyses were performed for each applicable analysis on project samples as sample volume allowed. All parameters for the project sample matrix spikes were within the established control limits unless otherwise noted.

The MS, MSD and/or RPDs for several EPA 8270C SIM Pesticide analytes were outside the 50-150% control limits specified in the project SAP. In addition, one or more MS, MSD and/or RPD values were outside ECI's control limits. The results have been flagged with the appropriate qualifiers and are released with no further action since the LCS recoveries were within the control limits.

Several of the PCB Congener matrix spike recoveries were outside the 50-150% control limits. Since the LCS/LCSDs were in control, the results are released with no further action.

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits with the following exceptions.

The Dibutylchloroendate recovery was above the control limits in sample CS-FF-WC-C1-20141015. The results were confirmed by re-analysis and have been released with the appropriate qualifiers.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/15/14. They were assigned to Work Order 14-10-1157.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-10-1157

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |
| | Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

- For halibut and croaker, skin-off fillets from fish within a labeled bag should be composited. Do not include ribs and stomach tissue in the fillet.
- For white perch and pacific pompano, whole fish within a labeled bag should be composited (this differs from the SAP) due to the lack of mass necessary for analysis of fillet composites.
- When creating a composite, composite ALL individuals (or their fillets- see above for details) included in a labeled composite sample bag and ensure that each sample has been homogenized to a consistent color and texture prior to subsampling for analyses. After subsampling, freeze (to at least -20°C) and archive the remaining homogenized tissue from each composite. Please contact Anchor QEA prior to disposal of archived, frozen tissue homogenates or frozen tissue archives.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

CASE NARRATIVE
Eurofins Calscience Work Order No.: 14-10-0602
Project: TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the tissue samples.

Sample Condition on Receipt

Sixty-nine tissue samples were received on 29 September, 2014, and fifty-seven tissue samples were received on 30 September, 2014 (under ECI WO No. 14-09-2314 and 14-09-2442). The samples were transferred to the laboratory in an ice-chest on ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory ranged from 3.3-3.6°C. All samples were given laboratory identification numbers and held in freezers pending further instructions. On 8 October, 2014, the samples were re-labeled and logged into the Laboratory Information Management System (LIMS) based on the compositing instructions provided by the client.

Tests Performed

Percent Moisture by ASTM D-2216 (M)
Chlorinated Pesticides by EPA 8270C SIM
Toxaphene by EPA 8081A
PCB Congeners by EPA 8270C SIM
Percent Lipids by MeCl₂/NOAA 1993a

Data Summary

All samples were homogenized prior to preparation and analysis.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Method Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

For QC Batch # 141011L04M, the Alpha Chlordane LCS recovery was below the 50-150% criteria specified in the SAP. However, the recovery was within ECI's control limits. In addition, an LCSD was performed and the Alpha Chlordane recovery was within the 50-150% control limits.

Matrix Spikes

Matrix spike analyses were performed for each applicable analysis on project samples as sample volume allowed. All parameters for the project sample matrix spikes were within the established control limits unless otherwise noted.

The MS, MSD and/or RPDs for one or more EPA 8270C SIM Pesticide analytes (in all QC batches) were outside the 50-150% control limits specified in the project SAP. In addition, one or more MS, MSD and/or RPD values were outside ECI's control limits in QC Batches 141116L01 and 141011L04. The results have been flagged with the appropriate qualifiers and are released with no further action since the LCS recoveries were within the control limits.

Several of the PCB Congener MSD and RPDs were outside the 50-150% control limits in QC Batch 141010S26. Since the LCS/LCSDs were in control, the results are released with no further action.

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/08/14. They were assigned to Work Order 14-10-0602.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

RPD: Relative Percent Difference. CL: Control Limits

Glossary of Terms and Qualifiers

Work Order: 14-10-0602

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSO or PES/PESO associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

- For halibut and croaker, skin-off fillets from fish within a labeled bag should be composited. Do not include ribs and stomach tissue in the fillet.
- For white perch and pacific pompano, whole fish within a labeled bag should be composited (this differs from the SAP) due to the lack of mass necessary for analysis of fillet composites.
- When creating a composite, composite ALL individuals (or their fillets-see above for details) included in a labeled composite sample bag and ensure that each sample has been homogenized to a consistent color and texture prior to subsampling for analyses. After subsampling, freeze (to at least -20°C) and archive the remaining homogenized tissue from each composite. Please contact Anchor QEA prior to disposal of archived, frozen tissue homogenates or frozen tissue archives.

| Date | Sample/group | Taxon | Comments/Notes |
|-----------|--------------|------------------------------------|---|
| 6-Nov-13 | POLA/LB | Callianasid IDS | These could be collapsed to <i>N. gigas</i> if no other species is found in the POLA/LB samples! |
| 6-Nov-13 | POLA/LB | Pinnotheridae/ Pinnixa | See notes in species listing (names tab). These cannot be collapsed together because of some Pinnotheridae include likely <i>Scleroplax</i> and these were not separated out for the listed stations |
| 12-Nov-13 | POLA/LB | Zeuxo normani CMPLX | 44 specimens from Station 8397 included 25 with 6-articulate uropods and 19 with 5-articulate uropods. Email distribution to B13taxon@sccwrp.org announced use of <i>Z. normani</i> CMPLX. No character could be found to distinguish the two different forms as either <i>Z. normani</i> or <i>Z. paranormani</i> . |
| 13-Nov-13 | POLA/LB | Caprella sp WS1 | Caprella simia male was collected at Station TMDL1-CH. This specimen was 10 mm (about 2-3 mm larger than the <i>C. sp</i> WS1 specimens. Need to compare the two later. And Change Caprella sp WS1 to <i>C. simia</i> throughout as necessary |
| 20-Nov-13 | POLA/LB | Heterophoxus cf ellisi | Differentiated from offshore form by smaller Ep3 tooth, and singly inserted spines on Posterior margin of P6, Art 5 (vs long seta + spine in <i>H. ellisi</i>). ALL historical embayment specimens may also want to be differentiated in this way. |
| 13-Dec-13 | POLA/LB | Sinocorophiu m heteroceratum | Distinguished from <i>S. alienense</i> by large medial projection on male antenna 1; absence of "teeth" on Ant 2, Art 4-5; presence of dorsal fascicle of 4-5 long spines disto-laterally on peduncle of Ur1; spinose lateral margin of Ur 2; Specimens confirmed by lateral spines on Ur 1 peduncle (vs setae in <i>S. heteroceratum</i>), elongate peduncle extending clear beyond telson (vs. barely so in <i>S. heteroceratum</i>) and/or long mandibular palp article 2 (vs short in <i>S. heteroceratum</i>) |

APPENDIX D
DATA VALIDATION REPORTS

DATA VALIDATION REVIEW REPORT – EPA STAGE 2A

Project: GWMA – TMDL Compliance Monitoring – 2015 Winter Wet
Project Number: 141205-01.01
Date: May 18, 2015

This report summarizes the review of analytical results for 67 water samples, five field duplicates, one rinsate blank, and one field blank collected February 24, 2015. The samples were collected by Anchor QEA, LLC, and submitted to Eurofins Calscience, Inc (ECI). The samples were analyzed for the following parameters:

- Chlorinated pesticides by United States Environmental Protection Agency (USEPA) method 8081A
- Polychlorinated biphenyl congeners (PCBs) by USEPA method 8270C SIM
- Total and dissolved mercury (Hg) by USEPA method 1631E
- Total and dissolved metals by USEPA method 1640
- Total suspended solids (TSS) by Standard Method (SM) 2540D

ECI sample data group (SDG) numbers 15-02-1742, 15-02-1894, and 15-02-1895 were reviewed in this report. Sample IDs, matrices, and analyses conducted are presented in Table 1.

Table 1
Sample IDs, Matrices, and Analyses

| Sample ID | Lab ID | Matrix | Analyses |
|-----------------------|---------------|--------|---|

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures and data quality objective sections of the Sampling and Analysis Plans (SAP; Anchor QEA 2014).

Laboratory results were reviewed using the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (USEPA 2004)
- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review* (USEPA 1999)
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA 2008)

Laboratory and method QC criteria were also used as stated in USEPA 1986 (SW-846, Third Edition), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods*, update 1, August 1993; update II, January 1995; update IIA, February 1994; update IIB, August 1995; update III, June 1997; update IIIA, May 1999; update IIIB, June 2008; update IVA and IVB, January 2008. Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by ECI at the time of sample receipt; the samples were received within the recommended temperature range and in good condition. Samples LE-RW-21-G-S-20150224 and OB-RW-08-G-B-20150224 appeared on the COC twice. The sample IDs of the second set of bottles collected for each sample were changed to LE-RW-1021-G-S-20150224 and OB-RW-1008-G-B-20150224 to indicate that these samples are field duplicates.

Holding Times and Sample Preservation

Samples were appropriately preserved and analyzed within holding times.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies. All method blanks were free of target analytes with the exceptions of several metals in the total and dissolved

fractions. Associated detected sample results that were not significantly greater than (>5x) the concentrations in the method blanks have been qualified as non-detects.

See Table 4 for qualified data.

Field Quality Control

Field Blanks and Equipment Blanks

One field blank and one equipment rinsate blank were collected and analyzed in association with these sample sets. The blank results were below detection with the exceptions of some low-level metals detections. These are summarized in Table 2.

Table 2
Field Blank and Equipment Blank Detections Summary

| Sample | Analyte | Concentration |
|-------------|-------------------|---------------|
| EB20150224 | Dissolved cadmium | 0.0106J µg/L |
| | Dissolved copper | 1.01B µg/L |
| | Dissolved lead | 0.294 µg/L |
| | Total cadmium | 0.0169J µg/L |
| | Total mercury | 0.00255B µg/L |
| FB-20150224 | Dissolved mercury | 0.00132 µg/L |
| | Total copper | 2.09B µg/L |

Notes:

µg/L = microgram per liter

No sample results were qualified based on field or equipment blank results.

Field Duplicates

Five water field duplicates were collected in association with these sample sets. Detected results are summarized in Table 3.

Table 3
Field Duplicate Summary

| Analyte | CS-RW-01-G-S-20150224 | CS-RW-1001-G-S-20150224 | RPD |
|---------|-----------------------|-------------------------|------|
| TSS | 0.95U mg/L | 3.0 mg/L | 200% |

| Analyte | LE-RW-21-G-S-20150224 | LE-RW-1021-G-S-20150224 | RPD |
|------------------------|-----------------------|-------------------------|-----|
| Dissolved mercury | 0.00323 µg/L | 0.00572 µg/L | 56% |
| Total mercury | 0.00893B µg/L | 0.00928B µg/L | 4% |
| Dissolved cadmium | 0.0535 µg/L | 0.0506 µg/L | 6% |
| Total cadmium | 0.0707 µg/L | 0.0776 µg/L | 9% |
| Dissolved chromium | 0.251J µg/L | 0.206J µg/L | 20% |
| Total chromium | 0.455J µg/L | 0.546 µg/L | 18% |
| Dissolved copper | 1.74B µg/L | 1.24B µg/L | 34% |
| Total copper | 3.21B µg/L | 3.47B µg/L | 8% |
| Dissolved lead | 0.209 µg/L | 0.216 µg/L | 3% |
| Total lead | 1.35 µg/L | 1.85 µg/L | 31% |
| Dissolved zinc | 7.13B µg/L | 5.93B µg/L | 18% |
| Total zinc | 11.1B µg/L | 11.4B µg/L | 3% |
| Total suspended solids | 5.9 mg/L | 9.1 mg/L | 43% |

| Analyte | LE-RW-22-G-S-20150224 | LE-RW-1022-G-S-20150224 | RPD |
|-------------------|-----------------------|-------------------------|-----|
| Dissolved Mercury | 0.0043 µg/L | 0.00203 µg/L | 72% |
| Total Mercury | 0.0114B µg/L | 0.00991B µg/L | 14% |
| Dissolved Cadmium | 0.0427 µg/L | 0.0522 µg/L | 20% |
| Total Cadmium | 0.0635 µg/L | 0.0661 µg/L | 4% |
| Total Chromium | 0.451J µg/L | 0.422J µg/L | 7% |
| Dissolved Copper | 0.735B µg/L | 1.78B µg/L | 83% |
| Total Copper | 2.58B µg/L | 3.31B µg/L | 25% |
| Dissolved Lead | 0.154 µg/L | 0.194 µg/L | 23% |
| Total Lead | 1.46 µg/L | 0.966 µg/L | 41% |
| Dissolved Zinc | 4.24B µg/L | 7.43B µg/L | 55% |
| Total Zinc | 9.07B µg/L | 9.9B µg/L | 9% |

Results at or near the reporting limit (RL) may have exaggerated relative percent difference (RPD) values. Most results are within the project required control limit of less than or equal to 25% relative percent difference (RPD) value. The RPD control limit does not apply when the difference between the results is less than or equal to 2x MRL and the results are $\leq 5x$ MRL. Dissolved mercury, dissolved copper and total lead exceeded control limits in both sets of field duplicate pairs. The TSS RPD value was above the control limit for samples LE-RW-21-G-S-20150224 and LE-RW-1021-G-S-20150224. The dissolved zinc RPD value was above the control limit for samples LE-RW-22-G-S-20150224 and LE-RW-1022-G-S-20150224. No data were qualified based on field duplicate results.

Surrogate Recoveries

Surrogate recoveries were within laboratory control limits with the exception of decachlorobiphenyl in the pesticide analyses of samples CS-RW-01-G-S-20150224, IA-RW-02-G-S-20150224, and IA-RW-04-G-S-20150224 in SDG 15-02-1894. The surrogates

recovered above the control limit, however, no pesticides were detected in the samples so no data were qualified.

Column Confirmation

No pesticide results were detected by method 8081A so second column confirmation was not required.

Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequencies and all LCS/LCSD analyses resulted in recoveries and/or RPD values within project-required control limits.

Matrix Spike and Matrix Spike Duplicate

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at required frequencies or LCS/LCSDs were analyzed in place of MS/MSD samples. Some MS/MSD results were reported for non-project samples and no data were qualified based on these results. When the parent sample concentration was significantly greater than (>4x) the spike concentration, percent recoveries were not calculated and no data were qualified. MS/MSD recoveries and/or RPD values were within project-required control limits with the following exceptions:

- SDG 15-02-1895 Metals – The MSD analyzed on sample IB-RW-12-G-S-20150224 recovered above the control limit for total chromium. Associated results were qualified “J” to indicate a potentially high bias.
- SDG 15-02-1742 Metals – The MS and MSD analyzed on sample LE-RW-1022-G-S-20150224 recovered above the control limits for total mercury. Associated results were qualified “J” to indicate a potentially high bias.

See Table 4 for qualified data.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or MSDs or LCSDs were analyzed in place of lab duplicates. All duplicate results were within required limits.

Method Reporting Limits

Reporting limits were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted, or when reported as diluted, the reporting limit accurately reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was also acceptable as demonstrated by the field and laboratory duplicates, MS/MSD, and LCS/LCSD RPD values. Most data were acceptable as reported; all other data are acceptable as qualified. Table 4 summarizes the qualifiers applied to sample results reviewed in this report.

Data Qualifier Definitions

- U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.
- J Indicates an estimated value.
- R Indicates data is rejected and unusable
- UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated
- DNR Do not report

Table 4
Data Qualification Summary

| Sample ID | Metals Fraction | Analyte | Reported Result | Qualified Result | Reason |
|-----------------------|-----------------|----------|-----------------|------------------|----------------------------|
| CB-RW-11-G-S-20150224 | Dissolved | Cadmium | 0.0628B µg/L | 0.0628U µg/L | Method blank contamination |
| | Total | | 0.0597B µg/L | 0.0597U µg/L | |
| | Total | Chromium | 0.532 µg/L | 0.532J µg/L | High MSD %R |

DATA VALIDATION REVIEW REPORT – EPA STAGE 2A

Project: GWMA – TMDL Compliance Monitoring – 2015 Summer Dry
Project Number: 141205-01.02
Date: August 6, 2015

This report summarizes the review of analytical results for 66 water samples, three field duplicates, one rinsate blank, and one field blank collected July 7, 2015. The samples were collected by Anchor QEA, LLC and Coastal Resources Management, and submitted to Eurofins Calscience, Inc (ECI). The samples were analyzed for the following parameters:

- Chlorinated pesticides by United States Environmental Protection Agency (USEPA) method 8081A
- Polychlorinated biphenyl congeners (PCBs) by USEPA method 8270C SIM
- Total and dissolved mercury (Hg) by USEPA method 1631E
- Total and dissolved metals by USEPA method 1640
- Total suspended solids (TSS) by Standard Method (SM) 2540D

ECI sample data group (SDG) numbers 15-07-0283, 15-07-0298, and 15-07-0323 were reviewed in this report. Sample IDs, matrices, and analyses conducted are presented in Table 1.

Table 1
Sample IDs, Matrices, and Analyses

| Sample ID | Lab ID | Matrix | Analyses |

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures and data quality objective sections of the Sampling and Analysis Plan (SAP; Anchor QEA 2014).

Laboratory results were reviewed using the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (USEPA 2004)
- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review* (USEPA 1999)
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA 2008)

Laboratory and method QC criteria were also used as stated in USEPA 1986 (SW-846, Third Edition), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods*, update 1,

August 1993; update II, January 1995; update IIA, February 1994; update IIB, August 1995; update III, June 1997; update IIIA, May 1999; update IIIB, June 2008; update IVA and IVB, January 2008. Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody (COC) forms were signed by ECI at the time of sample receipt; the samples were received within the recommended temperature range and in good condition. There were a few sample identification discrepancies on the COC forms, but these were all addressed by the lab and data are not affected.

Holding Times and Sample Preservation

Samples were appropriately preserved and analyzed within holding times.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies. All method blanks were free of target analytes.

Field Quality Control

Field Blanks and Equipment Blanks

One field blank and one equipment rinsate blank were collected and analyzed in association with these sample sets. The blank results were below detection with the exceptions of some low-level metals detections. These are summarized in Table 2.

Table 2
Field Blank and Equipment Blank Detections Summary

| Sample | Analyte | Concentration |
|-------------|------------------|---------------|
| EB-20150707 | Total lead | 0.0441 µg/L |
| | Total copper | 0.654 µg/L |
| | Total zinc | 1.17 µg/L |
| FB-20150707 | Total copper | 0.478 µg/L |
| | Dissolved copper | 0.493 µg/L |

Notes:

µg/L = microgram per liter

No sample results were qualified based on field or equipment blank results.

Field Duplicates

Five water duplicates were collected in association with these sample sets, including two lab duplicates collected in exactly the same manner as field duplicates for TSS. Detected results and relative percent difference (RPDs) values are summarized in Table 3.

**Table 3
Field Duplicate Summary**

| Analyte | LE-RW-21-G-S-20150707 | LE-RW-1021-G-S-20150707 | RPD | MRL | Difference |
|---------|-----------------------|-------------------------|-----|----------|------------|
| TSS | 2.8 mg/L | 6.6 mg/L | 81% | 1.0 mg/L | 3.8 mg/L |

| Analyte | IA-RW-02-G-S-20150707 | IA-RW-1002-G-S-20150707 | RPD | MRL | Difference |
|--------------------|-----------------------|-------------------------|------|-------------|-------------|
| Dissolved mercury | 0.596 ng/L | 0.113U ng/L | 200% | -- | -- |
| Total mercury | 1.04 ng/L | 1.48 ng/L | 35% | 0.500 ng/L | 0.44 ng/L |
| Dissolved cadmium | 0.0314 µg/L | 0.023J µg/L | 31% | 0.0300 µg/L | 0.0084 µg/L |
| Total cadmium | 0.0363 µg/L | 0.0287J µg/L | 23% | -- | -- |
| Dissolved chromium | 0.318J µg/L | 0.318J µg/L | 0% | -- | -- |
| Total chromium | 0.504 µg/L | 0.451J µg/L | 11% | -- | -- |
| Dissolved copper | 0.129 µg/L | 1.37 µg/L | 166% | 0.0300 µg/L | 1.241 µg/L |
| Total copper | 2.7 µg/L | 2.32 µg/L | 15% | -- | -- |
| Dissolved lead | 0.036 µg/L | 0.0149J µg/L | 83% | 0.0300 µg/L | 0.0211 µg/L |
| Total lead | 0.236 µg/L | 0.173 µg/L | 31% | 0.0300 µg/L | 0.063 µg/L |
| Dissolved zinc | 0.459J µg/L | 4.37 µg/L | 162% | 0.500 µg/L | 3.911 µg/L |
| Total zinc | 8.16 µg/L | 6.76 µg/L | 19% | -- | -- |

Results at or near the reporting limit (RL) may have exaggerated RPD values. Most results are within the project required control limit of less than or equal to 25% RPD value. The RPD control limit does not apply when the difference between the results is less than or equal to two times the RL and the results are less than five times the RL. The TSS RPD value was above the control limit for samples LE-RW-21-G-S-20150707 and LE-RW-1021-G-S-

20150707, and the difference between the two values was greater than the RL. The total lead, dissolved copper and dissolved zinc RPD values were above the control limit for samples IA-RW-02-G-S-20150707 and IA-RW-1002-G-S-20150707, and the differences between the results were greater than the RL. No data were qualified based on field duplicate results.

Surrogate Recoveries

Surrogate recoveries were within laboratory control limits.

Column Confirmation

No pesticide results were detected by method 8081A so second column confirmation was not required.

Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequencies and all LCS/LCSD analyses resulted in recoveries and/or RPD values within project-required control limits.

Matrix Spike and Matrix Spike Duplicate

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at required frequencies or LCS/LCSDs were analyzed in place of MS/MSD samples. Some MS/MSD results were reported for non-project samples and no data were qualified based on these results. When the parent sample concentration was significantly greater than (>4x) the spike concentration, percent recoveries were not calculated and no data were qualified. MS/MSD recoveries and/or RPD values were within project-required control limits with the exceptions of total metals in SDG 15-07-0323. The MS and MSD analyzed on sample IB-RW-12-G-S-20150707 recovered above the control limit for total cadmium, chromium and zinc. Detected results were qualified “J” to indicate a potentially high bias.

See Table 4 for qualified data.

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or MSDs or LCSDs were analyzed in place of lab duplicates. All duplicate results were within required limits.

Method Reporting Limits

Reporting limits were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted, or when reported as diluted, the reporting limit accurately reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was also acceptable as demonstrated by the field and laboratory duplicates, MS/MSD, and LCS/LCSD RPD values. Most data were acceptable as reported; cadmium, chromium and zinc results in nine samples were qualified for high MS and MSD percent recovery values, and are acceptable as qualified. Table 4 summarizes the qualifiers applied to sample results reviewed in this report.

Data Qualifier Definitions

J Indicates an estimated value.

Table 4
Data Qualification Summary

| Sample ID | Analyte | Reported Result | Qualified Result |
|-----------------------|----------|-----------------|------------------|
| CB-RW-11-G-S-20150707 | Cadmium | 0.0255J µg/L | 0.0255J µg/L |
| | Chromium | 0.49J µg/L | 0.49J µg/L |
| | Zinc | 5.95 µg/L | 5.95J µg/L |
| CM-RW-10-G-S-20150707 | Cadmium | 0.0378 µg/L | 0.0378J µg/L |
| | Chromium | 0.536 µg/L | 0.536J µg/L |
| | Zinc | 32.4 µg/L | 32.4J µg/L |
| IB-RW-12-G-S-20150707 | Cadmium | 0.0299J µg/L | 0.0299J µg/L |
| | Chromium | 0.605 µg/L | 0.605J µg/L |
| | Zinc | 17.8 µg/L | 17.8J µg/L |
| IB-RW-13-G-S-20150707 | Cadmium | 0.0214J µg/L | 0.0214J µg/L |
| | Chromium | 0.51 µg/L | 0.51J µg/L |

| Sample ID | Analyte | Reported Result | Qualified Result |
|-----------------------|----------|-----------------|------------------|
| | Zinc | 3.97 µg/L | 3.97J µg/L |
| IB-RW-14-G-S-20150707 | Cadmium | 0.0204J µg/L | 0.0204J µg/L |
| | Chromium | 0.53 µg/L | 0.53J µg/L |
| | Zinc | 2.93 µg/L | 2.93J µg/L |
| IB-RW-15-G-S-20150707 | Cadmium | 0.0149J µg/L | 0.0149J µg/L |
| | Chromium | 0.356J µg/L | 0.356J µg/L |
| | Zinc | 1.97 µg/L | 1.97J µg/L |
| OA-RW-08-G-S-20150707 | Cadmium | 0.0149J µg/L | 0.0149J µg/L |
| | Chromium | 0.489J µg/L | 0.489J µg/L |
| | Zinc | 1.94 µg/L | 1.94J µg/L |
| OA-RW-09-G-S-20150707 | Cadmium | 0.0228J µg/L | 0.0228J µg/L |
| | Chromium | 0.557 µg/L | 0.557J µg/L |
| | Zinc | 3.17 µg/L | 3.17J µg/L |
| OB-RW-16-G-S-20150707 | Cadmium | 0.015J µg/L | 0.015J µg/L |
| | Chromium | 0.344J µg/L | 0.344J µg/L |
| | Zinc | 1.15 µg/L | 1.15J µg/L |

DATA VALIDATION REVIEW REPORT – EPA STAGE 2A

Project: GWMA – TMDL Compliance Monitoring
Project Number: 130153-01
Date: March 4, 2015

This report summarizes the review of analytical results for 30 tissue samples, 131 water samples, six field duplicates, two rinsate blanks, and two field blanks collected September 26, 28, and 30, October 8 and 15, and November 2, 2014. The samples were collected by Anchor QEA, LLC, and submitted to Eurofins Calscience, Inc (ECI). The samples were analyzed for the following parameters:

- Chlorinated pesticides by United States Environmental Protection Agency (USEPA) method 8270C Select Ion Monitoring (SIM) and 8081A
- Polychlorinated biphenyl congeners (PCBs) by USEPA method 8270C SIM
- Percent lipids by NOAA 1993a
- Percent moisture by American Standard Testing and Materials (ASTM) method D2216 modified
- Total and dissolved mercury (Hg) by USEPA method 1631E
- Total and dissolved metals by USEPA method 1640
- Total suspended solids (TSS) by Standard Method (SM) 2540D

ECI sample data group (SDG) numbers 14-10-0602, 14-10-1157, 14-09-2205, 14-09-2270, 14-10-0029, 14-11-0041, and 14-11-0050 were reviewed in this report. Sample IDs, matrices, and analyses conducted are presented in Table 1.

Table 1
Sample IDs, Matrices, and Analyses

| Sample ID | Lab ID | Matrix | Analyses |
|----------------------|--------------|--------|------------------------------------|
| CP-FF-CH-C1-20141008 | 14-10-0602-1 | Tissue | Pesticides, PCBs, lipids, moisture |

Data Validation and Qualifications

The following comments refer to the laboratory's performance in meeting the quality assurance/quality control (QA/QC) guidelines outlined in the analytical procedures and data quality objective sections of the Sampling and Analysis Plans (SAP; Anchor QEA 2014a and 2014b). Laboratory results were reviewed using the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (USEPA 2004)
- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review* (USEPA 1999)
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA 2008)

Laboratory and method QC criteria were also used as stated in USEPA 1986 (SW-846, Third Edition), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods*, update 1, August 1993; update II, January 1995; update IIA, February 1994; update IIB, August 1995; update III, June 1997; update IIIA, May 1999; update IIIB, June 2008; update IVA and IVB, January 2008. Unless noted in this report, laboratory results for the samples listed above were within QC criteria.

Field Documentation

Field documentation was checked for completeness and accuracy. The chain-of-custody forms were signed by ECI at the time of sample receipt; the samples were received within the recommended temperature range and in good condition.

Holding Times and Sample Preservation

Samples were appropriately preserved and analyzed within holding times with the exceptions of several TSS analyses, which were conducted a few hours past the 7-day hold time. Results are not expected to be significantly impacted so no data were qualified.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequencies. All method blanks were free of target analytes with the following exceptions:

- SDG 14-09-2205 Metals - Cadmium and zinc in the total metals method blank and cadmium, lead, and zinc in the dissolved metals method blank were detected at levels between the method detection limit (MDL) and the method reporting limit (MRL). Associated detected sample results that were not significantly greater than (>5x) the concentration in the method blank have been qualified as non-detects.
- SDG 14-10-0029 Mercury – Mercury was detected between the MDL and the MRL in one of the method blanks analyzed in association with the dissolved metals analyses. All associated sample results were above detection but not significantly greater than (>5x) the level detected in the method blank and have been qualified as non-detects.
- SDG 14-11-0041 Metals – Copper and zinc were detected at levels between the MDL and the MRL in the method blanks analyzed in association with the total and dissolved metals analyses. Five associated detected sample results were not significantly greater than (>5x) the level detected in the method blank and have been qualified as non-detects.
- SDG 14-11-0050 Metals – Mercury, cadmium, copper, and zinc were detected between the MDL and the MRL in the method blanks analyzed in association with the total and dissolved metals analyses. Sample results above detection but not significantly greater than (>5x) the levels detected in the method blanks and have been qualified as non-detects.

Field Quality Control

Field Blanks and Equipment Blanks

Two field blanks and two equipment rinsate blanks were collected and analyzed in association with these sample sets. The blank results were below detection with the exceptions of some low-level metals detections. These are summarized in Table 2.

Table 2**Field Blank and Equipment Blank Detections Summary**

| Sample | Analyte | Concentration |
|-------------|--------------------|----------------|
| EB-20140930 | Dissolved copper | 0.0168J µg/L |
| | Dissolved mercury | 0.000337J µg/L |
| | Dissolved zinc | 0.862 µg/L |
| | Total mercury | 0.000383J µg/L |
| | Total zinc | 0.140J µg/L |
| FB-20140930 | Dissolved chromium | 0.201J µg/L |
| | Dissolved mercury | 0.000351J µg/L |
| | Dissolved zinc | 0.107J µg/L |
| | Total copper | 0.0442 µg/L |
| | Total mercury | 0.000364J µg/L |
| FB-20141102 | Total zinc | 0.180J µg/L |
| | Dissolved mercury | 0.000380J µg/L |
| EB20141102 | Total mercury | 0.000596B µg/L |
| | Total copper | 0.339B µg/L |
| | Total lead | 0.0779 µg/L |
| | Dissolved copper | 0.226B µg/L |
| | Dissolved lead | 0.0333 µg/L |

No sample results were qualified based on field or equipment blank results.

Field Duplicates

Six water field duplicates were collected in association with these sample sets. Detected results are summarized in Table 3.

Table 3
Field Duplicate Summary

| Analyte | OB-RW-17-G-M-20140926 | OB-RW-1017-G-M-20140926 | RPD | Difference |
|---------|-----------------------|-------------------------|-----|------------|

| Analyte | IA-RW-06-G-M-20140930 | IA-RW-1006-G-M-20140930 | RPD | Difference |
|---------|-----------------------|-------------------------|-----|------------|
| TSS | 1.5 mg/L | 1.7 mg/L | -- | 0.2 |

| Analyte | OA-RW-08-G-S-20140930 | OA-RW-1008-G-S-20140930 | RPD | Difference |
|--------------------|-----------------------|-------------------------|-----|------------|
| Dissolved cadmium | 0.0125J µg/L | 0.0373 µg/L | -- | 0.0248 |
| Dissolved chromium | 0.387J µg/L | 0.391J µg/L | -- | 0.004 |
| Dissolved copper | 0.0667 µg/L | 0.257 µg/L | -- | 0.1903 |
| Dissolved lead | 0.0135U µg/L | 0.0827 µg/L | -- | 0.0827 |
| Dissolved zinc | 0.29J µg/L | 3.36 µg/L | -- | 3.07 |

| Analyte | OA-RW-08-G-S-20140930 | OA-RW-1008-G-S-20140930 | RPD | Difference |
|----------------|-----------------------|-------------------------|-----|------------|
| Total cadmium | 0.0258J µg/L | 0.0272J µg/L | -- | 0.0014 |
| Total chromium | 0.399J µg/L | 0.423J µg/L | -- | 0.024 |
| Total copper | 0.414 µg/L | 0.273 µg/L | 41% | -- |
| Total lead | 0.595 µg/L | 0.124 µg/L | -- | 0.471 |
| Total mercury | 0.000473J µg/L | 0.000427J µg/L | -- | 0.000046 |
| Total zinc | 2.76 µg/L | 3.11 µg/L | 12% | -- |

| Analyte | IB-RW-12-G-M-20141102 | IB-RW-1012-G-M-20141102 | RPD | Difference |
|---------|-----------------------|-------------------------|-----|------------|
| TSS | 1.1 mg/L | 1.1 mg/L | -- | 0 |

| Analyte | IA-RW-04-G-S-20141102 | IA-RW-1004-G-S-20141102 | RPD | Difference |
|---------|-----------------------|-------------------------|-----|------------|
| TSS | 1.1 mg/L | 1.0U mg/L | -- | 1.1 |

| Analyte | LE-RW-21-G-S-20141102 | LE-RW-1021-G-S-20141102 | RPD | Difference |
|--------------------|-----------------------|-------------------------|-----|------------|
| Dissolved cadmium | 0.0821B µg/L | 0.0663B µg/L | 21% | -- |
| Dissolved chromium | 0.365J µg/L | 0.208J µg/L | -- | 0.157 |
| Dissolved copper | 4.48B µg/L | 1.58B µg/L | -- | 2.9 |
| Dissolved lead | 0.263 µg/L | 0.0993 µg/L | 90% | -- |
| Dissolved mercury | 0.000992B µg/L | 0.000752B µg/L | 28% | -- |
| Dissolved zinc | 23.2B µg/L | 10.2B µg/L | -- | 13 |
| Total cadmium | 0.0913B µg/L | 0.0717B µg/L | 24% | -- |
| Total chromium | 0.626 µg/L | 0.436J µg/L | 36% | -- |
| Total copper | 6.76B µg/L | 3.18B µg/L | -- | 3.58 |
| Total lead | 1.99 µg/L | 1.37 µg/L | -- | 0.62 |
| Total mercury | 0.00419B µg/L | 0.00267B µg/L | 44% | -- |
| Total zinc | 28.6B µg/L | 14.3B µg/L | -- | 14.3 |

Results are within the project required control limit of less than or equal to 25% relative percent difference (RPD) value when both results are > 5x MRL, or the difference between the results is less than or equal to 2x MRL if the results are ≤ 5x MRL with some exceptions. Total and dissolved copper, total and dissolved lead, and dissolved zinc results in the duplicate analysis of sample OA-RW-08-G-S-20140930 and all detected results in the duplicate analysis of sample LE-RW-21-G-S-20141102 except for total and dissolved cadmium and dissolved chromium exceeded control limits. No data were qualified based on field duplicate results.

Surrogate Recoveries

Surrogate recoveries were within laboratory control limits with the exception of dibutylchloroendate in the pesticide analysis of sample CS-FF-WC-C1-20141015. The surrogate recovered above the control limit and associated detected sample results have been qualified “J” to indicate a potentially high bias.

Column Confirmation

Detected pesticide results analyzed by method 8081A met second column confirmation requirements.

Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequencies. All LCS/LCSD analyses resulted in recoveries and/or RPD values within project-required control limits with the following exceptions:

- SDG 14-10-0602:
 - Pesticides – Alpha chlordane recovered below the control limit in the LCS reported in batch 141011L04 and 4,4'-DDD, 4,4'-DDE, and gamma chlordane recovered below the control limit in the associated LCSD. Associated sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - PCBs – All spiked PCBs recovered below the control limit in the LCSD reported in batch 141011L04 and the LCS/LCSD RPD values for this batch were above the control limit for twelve PCBs. All associated results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - SDG 14-10-1157:
 - Pesticides – The LCS and LCSD recovered below the control limit for alpha-chlordane, 4,4'-DDD, 4,4'-DDT, and gamma-chlordane. The LCS recovered below the control limit for 4,4'-DDE. Associated sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - PCBs – Seven PCBs recovered below the control limit in the LCSD. Associated sample results have been qualified “J” or “UJ” to indicate a potentially low bias. The LCS/LCSD RPD value was above the control limit for eight PCBs. Associated detected sample results have been qualified “J” to indicate a potentially low bias.
-

Matrix Spike and Matrix Spike Duplicate

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at required frequencies or LCS/LCSDs were analyzed in place of MS/MSD samples. Some MS/MSD results were reported for non-project samples and no data were qualified based on these results. MS/MSD recoveries and/or RPD values were within project-required control limits with the following exceptions:

- SDG 14-10-0602:
 - Pesticides –
 - The MS and MSD analyzed on sample OB-FF-WC-C3-20141008 recovered below the control limit for alpha-chlordane, 4,4'-DDD, and gamma chlordane. The MS also recovered below the control limit for 4,4'-DDT. Associated parent sample results have been qualified “J” to indicate a potentially low bias. 4,4'-DDE did not recover in either the MS or MSD analyzed on the same sample, however, the parent sample concentration was significantly greater than (>4x) the spike concentration so the result was not qualified. Dieldrin recovered above the control limit in the MS and MSD, however, this analyte was not detected in the parent sample so the result was not qualified.
 - The MS and MSD analyzed on sample SP-FF-CH-C1-20141008 recovered below the control limit for alpha-chlordane, 4,4'-DDT, dieldrin, and gamma chlordane. The MSD analyzed on this sample recovered below the control limit for 4,4'-DDD and 4,4'-DDE. In addition, the MS/MSD RPD values for 4,4'-DDD and 4,4'-DDE were above the control limit. Associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - The MS and MSD analyzed on sample CP-FF-CH-C1-20141008 recovered below the control limit for alpha-chlordane, 4,4'-DDD and gamma chlordane. The MSD analyzed on this sample recovered below the control limit for 4,4'-DDE. In addition, the MS/MSD RPD value for dieldrin was above the control limit. Associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - PCBs –
 - The MSD analyzed on sample CP-FF-CH-C1-20141008 recovered below the control limit and the MS/MSD RPD value was above the
-

-
- control limit for all spiked analytes. All associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
- Five PCBs recovered below the control limit in the MS analyzed on sample OB-FF-WC-C3-20141008 and eleven PCBs recovered below the control limit in the MSD. Associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
- SDG 14-10-1157:
 - Pesticides – The MS and MSD analyzed on sample CS-FF-WC-C1-20141015 did not recover for 4,4'-DDE, however the sample concentration was significantly greater than (>4x) the spike recovery so the result was not qualified. This MS/MSD set did not recover or recovered below the control limit for alpha-chlordane, 4,4'-DDD, 4,4'-DDT, and gamma chlordane and the MS/MSD RPD values were above the control limit for all spiked analytes. All associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - PCBs – The MS analyzed on sample CS-FF-WC-C2-20141015 recovered below the control limit for eleven spiked PCBs and the MS/MSD RPD values were above the control limit for three PCBs. Associated parent sample results have been qualified “J” or “UJ” to indicate a potentially low bias.
 - SDG 14-09-2205 Metals – Copper recovered above the control limit in the MS and MSD analyzed on sample LE-RW-22-G-S-20140926. Associated sample results were all detected and have been qualified “J” to indicate a potentially high bias.
 - SDG 14-11-0041 Metals – Total copper and total zinc recovered above the control limit in the MS and MSD analyzed on sample OB-RW-17-G-S-20141102. Associated detected sample results have been qualified “J” to indicate a potentially high bias.
 - SDG 14-11-0050 Metals – Total copper recovered above the control limit in the MS and MSD analyzed on sample LE-RW-22-G-S-20141102, however, the sample concentration was significantly greater than (>4x) the spike level so no data were qualified. Total chromium recovered above the control limit in the MSD. Associated detected sample results have been qualified “J” to indicate a potentially high bias. Total lead recovered below the control limit in the MS. Associated sample results have been qualified “J” to indicate a potentially low bias.
-

Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or MSDs or LCSDs were analyzed in place of lab duplicates. If the sample or duplicate result is less than five times the method reporting limit (MRL), than the RPD control limit is no longer appropriate. Sample results within \pm MRL for water matrices and \pm 2 times the MRL for solid matrices is the control limit in these situations. All duplicate results were within required limits with the following exceptions:

- SDG 14-10-0029 Metals – The difference between the dissolved lead results in the duplicate analyses of sample IA-RW-03-G-S-20140930 was above the control limit. Associated detected sample results have been qualified “J” to indicate they are estimated.
- SDG 14-10-0050 Conventionals – The difference between the TSS results in the duplicate analyses of sample SP-RW-19-G-B-20141102 was above the control limit. Associated detected sample results have been qualified “J” to indicate they are estimated.

Method Reporting Limits

Reporting limits were acceptable as reported. All values were reported using the laboratory reporting limits. Values were reported as undiluted, or when reported as diluted, the reporting limit accurately reflects the dilution factor.

Overall Assessment

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values, with the exceptions noted above. Precision was also acceptable as demonstrated by the field and laboratory duplicates, MS/MSD, and LCS/LCSD RPD values, with the exceptions noted above. Most data were acceptable as reported; all other data are acceptable as qualified. Table 4 summarizes the qualifiers applied to sample results reviewed in this report.

Data Qualifier Definitions

- U Indicates the compound or analyte was analyzed for but not detected at or above the specified limit.
 - J Indicates an estimated value.
-

- R Indicates data is rejected and unusable
- UJ Indicates the compound or analyte was analyzed for but not detected and the specified limit reported is estimated
- DNR Do not report

Table 4
Data Qualification Summary

| Sample ID | Parameter | Analyte | Reported Result | Qualified Result | Reason |
|-----------------------|--------------|-------------------|-----------------|------------------|--|
| CB-RW-11-G-S-20140930 | Metals | Dissolved lead | 0.236 µg/L | 0.236J µg/L | Lab duplicate result outside of control limit |
| | | Dissolved mercury | 0.000456BJ µg/L | 0.000456U µg/L | Method blank contamination |
| | | Total copper | 2.42B µg/L | 2.42J µg/L | MS/MSD %R above control limit |
