1 INTRODUCTION

The *Total Maximum Daily Load for Toxic Pollutants in Dominguez Channel and Greater Los Angeles and Long Beach Harbor Waters* (Harbor Toxics TMDL) became effective on March 23, 2012. The requirements of the Harbor Toxics TMDL are specified in Attachment A to Resolution No. R11-008, Amendment to the Water Quality Control Plan – Los Angeles Region (Regional Water Quality Control Board [RWQCB] 2011). The Harbor Toxics TMDL was promulgated to protect and restore fish tissue, water, and sediment quality in Dominguez Channel and Greater Los Angeles and Long Beach Harbor Waters (including Consolidated Slip; Greater Harbor Waters).

1.1 Background

Section 303 (d)(1)(A) of the Clean Water Act (CWA) requires states to identify waterbodies within its boundaries for which effluent limitations are not stringent enough to implement water quality standards applicable to those waters. This list of impaired waterbodies is commonly referred to as the Section 303(d) list. Subsequently, in accordance with Section 303 (d)(1)(C), states are required to develop a total maximum daily load (TMDL) for pollutants not meeting the effluent limitations and at a level necessary to implement the established water quality standards. A TMDL represents the maximum amount of a pollutant a waterbody can receive and still meet water quality standards.

The 2010 California 303 (d) List of Water Quality Limited Segments identified Los Angeles and Long Beach Inner and Outer Harbors, Inner Cabrillo Beach, Cabrillo Marina, Consolidated Slip, Fish Harbor, Eastern San Pedro Bay, and Los Angeles River Estuary (LARE) as water segments where standards are not met and a TMDL is required.. One or more pollutants or endpoints for each waterbody were listed as the cause of impairment for these waterbodies that comprise the Greater Harbor Waters (Table 1).

1.2 Harbor Toxics Total Maximum Daily Load

To protect marine life and minimize human health risks due to the consumption of fish, the Harbor Toxics TMDL includes annual contaminant limits in surface sediment, stormwater effluent, and fish tissues in the Greater Harbor Waters. These limits are defined as target loads or concentrations for compliance with the Harbor Toxics TMDL. The intent of a TMDL is to:

1) determine the quantity of contaminants a system can assimilate while protecting water quality; 2) determine all inputs of contaminants to the system and linkages of inputs to impairments; and 3) allocate reductions to each source to bring the waterbody into compliance with established criteria for the protection of beneficial uses related to water quality.

1.2.1 Numeric Targets

Applicable water quality objectives for the Harbor Toxics TMDL are narrative objectives for chemical constituents, bioaccumulation, and toxicity in the Water Quality Control Plan Los Angeles Region (Basin Plan; RWQCB 1994) and the numeric water quality criteria promulgated in 40 CFR section 131.38 (the California Toxics Rule [CTR]). In addition, sediment condition objectives were determined using sediment quality guidelines and the State Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1 Sediment Quality (Sediment Quality Objectives [SQO] Part 1; SWRCB-Cal EPA 2009).

Water targets were determined by the Basin Plan and the CTR.

Sediment targets were determined by the narrative standards of the Basin Plan, the SQO, and sediment quality guidelines (e.g., effects range low [ERL]) recommend in Long et al. (1998) and MacDonald et al. (2000). The Harbor Toxics TMDL anticipates that revisions to specific sediment quality targets may be determined by development of site-specific sediment quality values (SQVs).

Fish tissue targets were determined from Fish Contaminant Goals and Advisory Tissue Levels for Common Contaminants in California Sport Fish: chlordane, DDTs, dieldrin, methylmercury, polychlorinated biphenyls (PCBs), selenium, and toxaphene, developed by the Office of Environmental Health Hazard Assessment (OEHHA; 2008) to assist agencies in developing fish tissue-based criteria for pollution mitigation or elimination and to protect humans from consumption of contaminated fish.

1.2.2 Interim and Final Waste Load Allocations and Load Allocations

Final waste load allocations (WLAs) are assigned to stormwater dischargers (i.e., MS4, California Department of Transportation, general construction, and general industrial dischargers) and

other National Pollutant Discharge Elimination System dischargers. Final load allocations (LAs) are assigned to direct atmospheric deposition and bedded sediments in both wet and dry weather. Mass-based allocations have been set where sufficient data were available to calculate mass-based allocations; otherwise, concentration-based allocations have been set.

The following interim and final allocations are listed in Attachment A to Resolution No. R11-008, Amendment to the Water Quality Control Plan – Los Angeles Region (RWQCB 2011):

- Interim concentration-based allocation for sediment in Dominguez Channel Estuary and Greater Harbor Waters
- Final concentration-based WLAs for receiving water in Dominguez Channel Estuary and Greater Harbor Waters
- Final mass-based WLAs and LAs for Dominguez Channel Estuary and Greater Harbor Waters
- Final concentration-based sediment WLAs for metals in Dominguez Channel Estuary, Consolidated Slip, and Fish Harbor
- Final mass-based WLAs and LAs for bioaccumulative compounds in fish tissue for Dominguez Channel Estuary and Greater Harbor Waters

1.3 Compliance Measures

The Harbor Toxics TMDL set WLAs in the Greater Harbor waterbodies to limit sediment-bound pollutant loadings from upstream and on-land sources. In addition, the Harbor Toxics TMDL set LAs in the Greater Harbor waterbodies to limit concentrations in bedded sediments believed to impact marine benthos (direct effects) and fish tissue (indirect effects).

Water quality currently meets water quality objectives for beneficial use. However, monitoring is required to confirm no degradation is occurring. Water column concentrations will be compared to CTR criteria for both the Protection of Aquatic Life – Saltwater Chronic and the Protection of Human Health for consumption of organisms only.

Ultimately, compliance with sediments may be demonstrated via any of the following three means:

- Final sediment allocations, as presented in Attachment A to Resolution No. R11-008, Amendment to the Water Quality Control Plan – Los Angeles Region (RWQCB 2011), are met.
- The qualitative sediment condition of Unimpacted or Likely Unimpacted, via the interpretation and integration of multiple lines of evidence (MLOE) as defined in the SQO Part 1, is met, with the exception of chromium, which is not included in the SQO Part 1.
- Sediment numeric targets are met in bedded sediments over a 3-year averaging period.

Ultimately, compliance with fish tissues may be demonstrated via any of the following four means:

- Fish tissue targets are met in species resident to the Harbor Toxics TMDL waterbodies.
- Final sediment allocations, as presented in Attachment A to Resolution No. R11-008, Amendment to the Water Quality Control Plan – Los Angeles Region (RWQCB 2011), are met.
- Sediment numeric targets to protect fish tissue are met in bed sediment over a 3-year averaging period.
- The sediment quality condition protective of fish tissue is achieved per the Statewide Enclosed Bays and Estuaries Plan, as amended to address contaminants in resident finfish and wildlife.

1.4 Coordinated Compliance and Monitoring Reporting Plan

The Harbor Toxics TMDL requires monitoring activities by the responsible parties in the following three waterbody areas:

- Dominguez Channel, Torrance Lateral, and Dominguez Channel Estuary
- Greater Los Angeles and Long Beach Harbor Waters (including Consolidated Slip)
- Los Angeles River and San Gabriel River

The CCMRP outlines the monitoring activities to be conducted by the cooperating parties for the Greater Harbor Waters. To be consistent with and potentially collaborate with other regional monitoring programs, the sample collection methods prescribed within this CCMRP are to be conducted in accordance with methods established for use during the Southern California Coastal Water Research Project's (SCCWRP) Southern California Bight Regional Monitoring Program or the California State Surface Water Ambient Monitoring Program (SWAMP). Compliance monitoring and reporting activities must also be conducted in accordance with the Programmatic Quality Assurance Project Plan (PQAPP) developed for the Harbor Waters Toxics TMDL to ensure usability and provide benefit to other Harbor Waters Toxics TMDL-related programs and studies. The Final CCMRP was approved on June 6, 2014 (Unger 2014).

1.5 Programmatic Quality Assurance Project Plan

The PQAPP (Anchor QEA 2013) was developed to guide the collection of high quality data as part of compliance monitoring and special studies required by and in support of the Harbor Toxics TMDL. The PQAPP includes the following key elements that focus on analytical methods and data generated under this program:

- **Program Management.** This section identifies the specific roles and responsibilities of data collectors and data managers and describes the process through which field and analytical data will be processed, reduced, and stored in an EQuIS database by the managing consultant.
- **Field Sampling Data Quality Objectives.** This section includes detailed information on field collection requirements including sample processing, sample handling, sample identification, sample custody and shipping requirements, field quality control (QC) sample requirements with associated performance criteria, field records, and field electronic data deliverable (EDD) requirements.
- **Laboratory Data Quality Objectives.** This section includes detailed information on analytical methods, analyte lists and reporting limits, laboratory QC sample requirements with associated performance criteria and corrective actions, laboratory record requirements, and laboratory EDD requirements.
- **Data Review, Verification, and Validation.** This section outlines the procedures used to meet the project data quality objectives.

The PQAPP was designed to be programmatic in nature to address data quality needs for both compliance monitoring and other Harbor Toxics TMDL-related sampling and analysis activities over the next 5 years. The benefit of the programmatic approach outlined in the PQAPP is that there will be a uniform data collection and management program for all Harbor Toxics TMDL-related studies that provides high quality data and efficiencies due to standardization of sample collection, nomenclature, analysis, data review/validation, processing, storage, management, and seamless data export to the Regional Monitoring Coalition (RMC) and State databases, regardless of study type or contractors performing the work.

This CCMRP has been designed accordingly to incorporate relevant PQAPP elements in addition to supplemental information specific to the compliance monitoring program in order to develop a single, all-inclusive, monitoring plan compatible with SWAMP Quality Assurance Project Plan requirements.

2 METHODS

Methods were conducted in accordance with the Coordinated Compliance Monitoring and Reporting Plan (CCMRP) and accompanying matrix-specific Sampling and Analysis Plans (SAPs). Event-specific methods not incorporated into the CCMRP or SAPs are presented below. Deviations from the CCMRP and the SAP are presented in Section 3.4.

2.1 Station Locations

Station locations for both water quality and fish tissue were predetermined and vessel positioning was accomplished using an on-vessel differential GPS with an accuracy of plus or minus 10 feet (3 meters). The coordinates of the actual sampling locations were reported in latitude and longitude in decimal degrees on the field sample forms and were within 15 meters of the proposed sampling station. Positions were relative to the World Geodetic System 1984 (WGS84). Samples were labeled accordingly and as detailed in the CCMRP (Anchor QEA 2014a). The station identification codes were consistent with the station numbers listed in the Sediment Chemistry Monitoring Requirements table of the Harbor Toxics TMDL Basin Plan Amendment (RWQCB 2011).

2.2 Water

Water quality monitoring consisted of in situ measurements and collection of water samples for chemical analyses. Water samples were collected four times representing two wet weather events and two dry weather events.

- Summer 2014: This dry weather sampling event occurred across 3 days: September 26, 28, and 30, 2014. It was conducted after a minimum 72-hour antecedent period of dry weather, as required.
- Fall 2014: This wet weather sampling event occurred on November 2, 2014. It was held within 24 hours after a storm event to constitute the first of two wet weather sampling events. The qualifying storm occurred from October 31 to November 1 and was based on forecasting from National Oceanic and Atmospheric Administration's (NOAA's) National Weather Service (NWS). A total rainfall of 5.26 inches was recorded for a 24-hour period ending at 12 p.m., November 1.
- Winter 2015: This wet weather sampling event occurred on February 24, 2015. It was held within 24 hours after a storm event to constitute the second of two wet weather

sampling events. The qualifying storm occurred February 23 and was based on forecasting from NOAA's NWS. A total rainfall of 5.96 inches was recorded for a 24-hour period ending at 9 p.m., February 23.

- Summer 2015: This dry weather sampling event occurred on July 7, 2015. It was conducted after a minimum 72-hour antecedent period of dry weather, as required.

2.2.1 Field and Analytical Methods

As per the CCMRP, analytes and analytical processes were provided to the contracted laboratory. Sampling was conducted four times annually at 22 stations: two during wet weather events and two during a dry weather event. Water quality measurements and samples were collected at three depths (surface, mid-water column, and bottom). In situ measurements include temperature, dissolved oxygen (DO), hydrogen ion potential (pH), and salinity. Water samples were collected and submitted to the contracted laboratory for total suspended solids (TSS), total and dissolved metals, organochlorine pesticides, and PCB congeners.

2.2.2 Sampling Equipment

In situ water quality parameters were measured using a multi-parameter water quality instrument, equipped with sensors to measure temperature, DO, pH, and salinity. A lead line was attached to the instrument to estimate water depth at the time the measurements were taken. Once the instrument was lowered to the appropriate depth, the instrument was allowed to equilibrate for at least 1 minute at the targeted depth. Water samples were collected using a Van Dorn style water sampler that was decontaminated prior to each sample collection at each station.

2.2.3 Sample Identification

The sample nomenclature included the identifiers listed below, with an example in Figure 1. The identification codes shown below were used for the compliance monitoring program.

- Waterbody or site
- Media or sampling method code
- Station number
- Depth interval (in metric units), if applicable

- Date of collection
- Indication of field duplicate (i.e., add 1000 to station number) if applicable

For equipment rinsate blank or field blank samples, “EB” or “FB” were used, respectively, in place of the waterbody or site and station number. The date of sample collection was added to the end in YYYYMMDD format.

Sample nomenclature for water samples is shown in Figure 1 using the following example: a surface water sample grab, station number 09 from Outer Harbor – Los Angeles on July 31, 2013, is written as:

OA-RW-09-S-20130731

Sample nomenclature for field duplicates is shown in Figure 2, using the following example: a water sample collected at mid-depth, station number 09 from Outer Harbor – Los Angeles on July 31, 2013, that is a field duplicate is written as:

OA-RW-1009-M-20130731

Sample nomenclature for equipment blanks is shown in Figure 3, using the following example: an equipment blank of the decontaminated sample processing equipment after sample collection on July 31, 2013 is written as:

EB-20130731

2.2.4 Decontamination Procedures

All sample containers were pre-cleaned by laboratory standard procedures. All water quality equipment (e.g., Van Dorn sampler) in contact with the sample material was decontaminated using the following procedure:

1. Pre-rinse with tap or site water
2. Wash with solution of distilled water and Alconox™ soap
3. Rinse with site water
4. At the conclusion of the sampling event, rinse well with distilled water

5. Store in a clean closed container

New disposable gloves were used at each site to prevent cross-contamination.

2.2 Sediment

2.2.1 Bight Program and Bight 2013 Regional Monitoring

As per the Harbor Toxics TMDL, sediment quality monitoring will be performed twice every 5 years at each of the 22 stations. As agreed by the Los Angeles RWQCB on June 25, 2013, the first sediment sampling event conducted as part of the CCMRP was designed to coincide with the Southern California Bight Regional Monitoring Program in 2013 (Bight '13) to minimize costs associated with multiple sampling efforts and allow for a more robust and comprehensive dataset from which compliance could be evaluated (Unger 2013). Sediment sampling for the Bight '13 Regional Monitoring program included 396 stations throughout the Southern California Bight. Thirty stations were located within the Los Angeles and Long Beach Harbor waters, and 15 stations were located within Eastern San Pedro Bay and LARE.

2.2.2 Field Methods and Sampling Equipment

The field and laboratory methods described below are consistent with those described in the CCMRP and implemented as part of Bight '13. Field sediment sampling methods followed specific guidelines outlined in the Bight '13 Contaminant Impact Assessment (CIA) Field Operations Manual (Bight' 13 Field Sampling & Logistics Committee 2013), including field teams, activities, safety protocols, equipment use, sampling schedule, sampling stations, and managing data in the field. Surface sediment grabs were submitted for chemistry, toxicity, and benthic community analyses in accordance with the SQO Part I sediment triad assessment. Benthic samples were collected using a 0.1-m modified Van Veen grab sampler. Van Veen operation and sampling procedures are available in the Bight '13 CIA Field Operations Manual (Bight '13 Field Sampling & Logistics Committee 2013) and the Harbor Toxics TMDL/Bight '13 Monitoring Program Draft Report (Amec Foster Wheeler 2015). All equipment was rinsed and decontaminated between each site.

The field and laboratory methods were as follows:

- Sediment Chemistry – Samples were collected directly from an opening at the top of the sediment grab while the jaws of the Van Veen grab sampler were closed. The top 5 cm were collected using a decontaminated stainless steel scoop.
- Sediment Toxicity – Samples were collected directly from an opening at the top of the sediment grab while the jaws of the Van Veen grab sampler were closed. The top 5 cm were collected using a decontaminated stainless steel scoop; all containers were homogenized at the testing lab before being redistributed for toxicity testing.
- Benthic Community – Sediment was released from the Van Veen grab sampler into a plastic bin. The sediment was sieved through a 1.0-millimeter (mm) stainless steel mesh and rinsed with filtered seawater to wash sediment through the mesh, leaving benthic macroinfauna and larger debris for sorting and identification.

2.2.3 Station and Sample Identification

The Bight Program assigns sample locations using a stratified random design throughout the Southern California Bight. Bight Program sampling locations that fell within a water body segment defined in the Harbor Toxics TMDL-specified locations were considered representative of a Harbor Toxics TMDL-specified sampling point. If there was no sampling point within the representative water body area, then the Harbor Toxics TMDL-specified sampling point was added. For this Bight '13 event, four TMDL-specific locations were added to the Bight Program sampling design. Samples were labeled according to pre-determined nomenclature and as detailed in the Bight '13 CIA Field Operations Manual (Bight '13 Field Sampling & Logistics Committee 2013).

2.2.4 Sediment Quality Objectives Direct Effects Assessment

Sediment quality from Bight '13 samples collected in the Greater Harbor Waters was assessed using California's direct effects SQOs as described in the Final Staff Report, Water Quality Control Plan for Enclosed Bays and Estuaries, Part 1 – Sediment Quality (State Water Resources Control Board [SWRCB] – California Environmental Protection Agency [Cal EPA], 2008) and in Bay et al. (2009). The SQOs are based on a MLOE approach and includes sediment toxicity, sediment chemistry, and benthic community condition. The MLOE results were integrated through the evaluation of the severity of biological effects and

the potential for chemically-mediated effects to provide a final station level assessment. The specific methods associated with each line of evidence (LOE) and the integrated assessment are described below. Data used in this evaluation are considered preliminary Bight '13 data sampled and analyzed by Amec Foster Wheeler within Los Angeles and Long Beach Harbors; data collected in Eastern San Pedro Bay and LARE are not currently available for inclusion in this report. All data reported herein should be considered preliminary until the SCCWRP releases the fully validated results.

2.2.4.1 Sediment Toxicity

The *E. estuarius* and *M. galloprovincialis* sediment toxicity test results from each station were statistically compared to control test results, normalized to the control survival, and categorized according to Tables 2 and 3. The categories shown are established from thresholds using test-specific characteristics as described in detail by Bay et al. (2007). As shown in the table below, the categorization of data depends on whether or not the survival of *E. estuarius* and *M. galloprovincialis* from a project station is statistically significant from the survival of organisms in the control. For example, if survival of *E. estuarius* test sediment was 81% (of control survival) and was significantly different from the control survival using the statistical tests described above, then this sample would be categorized as “moderate toxicity.”

2.2.4.2 Sediment Chemistry

2.2.4.2.1 California Logistic Regression Model

Results of chemicals detected in project sediment were compared to the California Logistic Regression Model (CA LRM) and the Chemical Score Index (CSI). The CA LRM is based on the maximum probability model (PMAX) developed by Field et al. (2002). Each regression model estimates the probability of observing toxicity at the concentration of a contaminant of concern (or a class of contaminants of concern) in field collected sediments. The CA LRM follows this equation:

$$p = \frac{e^{B_0+B_1(x)}}{(1 + e^{B_0+B_1(x)})}$$

where:

| | | |
|----|---|---|
| p | = | probability of toxicity for target constituent |
| B0 | = | the intercept parameter |
| B1 | = | the slope parameter |
| e | = | natural log |
| x | = | the log of the concentration of the analyte of interest |

To calculate the CA LRM, concentrations of each contaminant are entered into the corresponding logistic regression model and the probability for causing toxicity is determined for each contaminant. The individual contaminant with the highest probability for causing toxicity is the PMAX value. The PMAX value determined for each project area is compared to the values in Table 4 and categorized according to the associated exposures (minimal, low, moderate, or high). For example, if the PMAX is determined to be 0.64, then the sample is categorized as “moderate exposure.”

2.2.4.2.2 Chemical Score Index

The CSI was developed by Ritter et al. (2007) for the SQO assessment and is based on the relationship between sediment chemical concentration and the degree of benthic community disturbance to Southern California benthic macrofauna. The CSI is the weighted mean of benthic community category scores based on guidelines developed for 13 contaminants with weighting factors for each contaminant as specified in Table 6 of Appendix A of the Final Staff Report (SWRCB-Cal EPA 2008). The CSI value determined for each project area is compared to the values in Table 4 and categorized according to the associated exposures (minimal, low, moderate, or high). For example, if the CSI is calculated to be 2.25, then the sample is categorized as “low exposure.”

2.2.4.2.3 Integration of Sediment Chemistry Categories

The final sediment LOE category is the average of the two chemistry exposure categories. If the average falls midway in between the two categories, it is rounded up to the higher (more impacted) of the two. For example, if the CA LRM is low exposure and the CSI is moderate exposure, then the final sediment LOE category is moderate exposure.

2.2.4.3 Benthic Community Condition

Benthic community condition was assessed using a combination of four benthic indices: the Benthic Response Index (BRI), Relative Benthic Index (RBI), Index of Biotic Integrity (IBI), and a predictive model based on the River Invertebrate Prediction and Classification System (RIVPACS). The BRI is the “abundance-weighted pollution tolerance score” of infaunal species, with scores increasing from 0 to 100 with greater levels of disturbance (Smith et al. 2001, 2003). The BRI scores were calculated using the abundances of species and their respective pollution-tolerance values. The RBI was calculated as the weighted sum of: a) four community parameters (total number of taxa, number of crustacean taxa, number of molluscan taxa, and number of crustacean individuals); b) three positive indicator organisms; and c) two negative indicator taxa. The RBI values were scaled from 0 to 1.0, with lower values indicative of higher levels of disturbance. Scores then were compared to categorization values to determine the community condition category of the sample (Table 5). Determination of the IBI involved comparisons of four community measures (total number of taxa, number of molluscan taxa, abundance of *Notomastus sp.*, and percentage of sensitive taxa) to reference conditions for Southern California bays and estuaries (Table 6). For every metric that exceeded a reference condition, the IBI value was increased by a score of one; therefore, IBI values potentially range from 0 to 4, with lower values indicative of lower levels of disturbance (Table 5). The RIVPACS index was used to compare the sample benthic community assemblages (Observed) to reference species compositions (Expected) within the same habitat. Calculation of the RIVPACS score involved the following calculations:

- The probability of the test sample belonging to the 12 Southern California reference sample groups
- The expected number of reference species based on probability of group membership
- The Observed/Expected RIVPACS score for comparisons to benthic community categorization values (Table 5)

The four indices were calculated according to guidance developed by SCCWRP (2008). Each benthic index result was categorized according to the following four levels of disturbance, with conditions ranging from a reference condition to high disturbance:

- Reference: Equivalent to a least affected or unaffected site

- Low Disturbance: Some indication of stress is present but is within measurement error of unaffected condition
- Moderate Disturbance: Clear evidence of physical, chemical, natural, or anthropogenic stress
- High Disturbance: High magnitude of stress

The benthic community condition was determined through the integration of the four indices into a single category by averaging the four benthic index response categories. If the median fell between two categories, the value was rounded to the next higher category to provide the most conservative estimate of benthic community condition.

2.2.5 Integrated Assessment by Station

The SQO direct effects assessment was evaluated at the station level. In accordance with the technical guidance (Bay et al. 2009), the station level assessment can be determined by combining the severity of biological effects category as shown in Table 7 with the potential for chemically-mediated effect category, which results in one of six possible station level assessments including unimpacted, likely unimpacted, possibly impacted, likely impacted, clearly impacted, and inconclusive.

2.3 Tissue

Fish tissue sampling consists of collection of targeted fish species for chemical analyses. As per the CCMRP, fish tissue samples are collected once every 2 years. Fish sampling was conducted from September 29 to October 2, 2014.

2.3.1 Field Methods

Sampling was conducted within four waterbodies: Consolidated Slip, Los Angeles Outer Harbor (near Cabrillo Pier), Long Beach Outer Harbor, and (eastern) Eastern San Pedro Bay (near Pier J). Targeted species that were caught and used for tissue analysis included white croaker (*Genyonemus lineatus*) and the sport fish California halibut (*Paralichthys californicus*). Shiner surfperch (*Cymatogaster aggregata*), northern anchovy (*Engraulis mordax*), and Pacific sardines (*Sardinops sagax*) were not caught in sufficient abundance for analyses; hence alternative prey species were collected and analyzed. Alternative prey fish

species collected and used for analysis included white surfperch (*Phanerodon furcatus*) and Pacific Pompano (*Peprilus simillimus*). Whole fish were collected and filleted (when applicable) and composited at the contracted laboratory. Fish tissues were analyzed for percent lipids, percent moisture, organochlorine pesticides, and PCB congeners.

2.3.2 Sampling Equipment

Fish were collected using a semi-balloon 7.6-meter headrope otter trawl from the vessel R/V *Early Bird II*. Trawls were deployed and towed for 10 minutes each. Upon trawl retrieval, fish were identified and sorted, and species of interest were measured (total length, fork length [when applicable], and weight) prior to being packaged and preserved on ice.

2.3.3 Sample Identification

Each sample had an adhesive plastic label affixed to the plastic bag and was labeled at the time of collection as specified in the fish tissue sampling and analysis plan (2014). The sample nomenclature included the identifiers listed below. The following identification codes were used when applicable:

- Waterbody or site
- Media or sampling method code
- Organism common name, if applicable
- Composite code
- Date of collection
- Indication of field duplicate (i.e., add 1000 to station number)

For equipment rinsate blank or field blank samples, “EB” or “FB” was used, respectively, in place of the waterbody or site and station number. The date of sample collection was added to the end in YYYYMMDD format.

For fish tissue samples, no station number was used. Because one station was selected in each of the four required waterbodies, the waterbody code is sufficient to identify fish tissue samples. “CP” was added as a designation of Cabrillo Pier used for an Outer Los Angeles Harbor sample to represent a popular fishing area.

Sample nomenclature for tissue samples is shown in Figure 4, using the following example: a white croaker, fish fillet skin off, composite one, from Outer Harbor – Long Beach on July 31, 2013, would be written as:

OB-FF-WC-C1-20130731

2.3.4 Sample Shipment Procedures

Fish samples were sacrificed and blotted dry prior to being packaged in aluminum foil (shiny side out). Each fish was individually labeled and packed in a re-sealable plastic bag and stored on ice. Samples were delivered to the analytical laboratory the same day they were collected.

2.4 Sediment Quality Objectives Indirect Effects Assessment

Although the State of California’s Water Quality Control Plan Part II (Indirect Effects) policy has not yet been finalized, the TMDL and Basin Plan make reference to this policy under development (and associated technical guidance) for assessing indirect effects or human health risks associated with sediment contamination. As specified in the draft technical guidance (Bay et al. 2009), the purpose of an indirect effects assessment is to determine if sediments meet the State’s narrative SQO for human health, or “Pollutants shall not be present in sediments at levels that will bioaccumulate in aquatic life to levels that are harmful to human health.” The indirect effects assessment evaluates whether sediment contamination at a site accumulates in seafood to levels that cause an unacceptable human health risk due to seafood consumption.

The guidance for demonstrating compliance through the SQO indirect effects policy is currently under development. Once the SQO indirect effects policy is finalized, this will be used instead of comparison to fish contamination goals (FCGs) to assess compliance with the TMDL.

3 RESULTS

Analytical chemistry results for water, sediment, and fish tissue are presented in the following sections. Field sampling forms for water, sediment, and fish sampling can be found in Appendices A-1, A-2, and A-3, respectively. Laboratory chemistry reports for water, sediment, and fish samples are available in Appendices B-1, B-2, and B-3, respectively.

3.1 Water

Water quality monitoring was conducted during four separate events: Summer 2014, Fall 2014 (coinciding with the first flush of the 2014/15 wet weather season), Winter 2015, and Summer 2015. Analytical results were compared to CTR Criteria for the Protection of Aquatic Life – Saltwater Chronic (CTR criteria [aquatic life]) and CTR Criteria for the Protection of Human Health for consumption of organisms only (CTR criteria [human health]). In general, analytical results showed concentrations at non-detectable levels or below applicable water quality criteria with the exception of dissolved copper and chlordane. Dissolved copper was the only parameter that exceeded CTR (aquatic life) criteria. At least one sample collected from all four events contained measurable concentrations greater than 3.1 micrograms per liter ($\mu\text{g/L}$) at locations within Consolidated Slip, Cabrillo Marina, Inner Long Beach Harbor, and LARE. Chlordane was the only parameter that exceeded CTR (human health) criteria. At least one sample collected from all four events contained measurable concentrations greater than 0.00059 $\mu\text{g/L}$ at locations within Inner Long Beach Harbor, Outer Long Beach Harbor, and Eastern San Pedro Bay. The number of samples with measurable concentrations greater than corresponding CTR criteria (aquatic life and human health) for all events per waterbody is shown in Table 8.

A detailed discussion of water quality results for each sampling event is provided in the following sections.

3.1.1 Summer 2014

3.1.1.1 Field Data

On September 26, 28, and 30, 2014, water samples and water quality measurements were collected at 22 predetermined locations through the Port of Los Angeles, Port of Long Beach,

and Eastern San Pedro Bay (Figure 5). Each station's coordinates and water depth were recorded. Measurements of DO, pH, salinity, and temperature were collected using a multi-parameter water quality instrument. Results were within expected ranges: DO ranged from 5.3 to 8.6 milligrams (mg)/L, pH ranged from 7.9 to 8.2 units, salinity ranged from 20.3 to 33.0 parts per thousand (ppt), and temperature ranged from 16.5 to 21.2 °C (Table 9). Field forms are provided in Appendix A-1.

3.1.1.2 Laboratory Data

Water samples were analyzed for several conventional parameters, total and dissolved metals, organochlorine pesticides, and PCB congeners. Analytical results are presented in Table 10. The number and percentage of exceedances relative to CTR criteria for all samples collected within the Greater Harbor Waters is also shown in Table 10. Dissolved copper at Station 10 in Cabrillo Marina had a concentration of 5.24 µg/L, which exceeded CTR criteria (aquatic life; representing only 4% of all samples collected). Chlordane exceeded the CTR criteria (human health) at Station 13 in Inner Long Beach Harbor, Station 16 in Outer Long Beach Harbor, and Station 19 in Eastern San Pedro Bay with concentrations of 0.0068 µg/L, 0.00061 µg/L, and 0.00065 µg/L, respectively. Toxaphene, dieldrin, and total PCBs were not detected in any water samples; however, the method detection limit (MDL) for toxaphene was elevated above both CTR criteria (aquatic life and human health) while the MDL for dieldrin and total PCBs was elevated above only the CTR criteria (human health). This indicates that there is some uncertainty in the determination of exceedance for these analytes¹². Water sample chemistry reports are available in Appendix B-1.

¹ While the TMDL target for toxaphene is an order of magnitude below other pesticides (i.e., 4,4'-DDT = 0.001 µg/L), it is well known that commercial laboratories cannot achieve the same (lower) detection limits for toxaphene as for other organochlorine pesticides. Using the standard methodology, toxaphene is difficult to analyze with the same sensitivity and precision as other organochlorines because it is a complex, multi-component mixture that can be further subjected to weathering in the environment. The complexity and weathering of toxaphene in the environment makes it dissimilar to analytical standards and therefore difficult to resolve with the same precision, sensitivity, and accuracy as other organochlorine chemicals.

² While the TMDL targets for both dieldrin and total PCBs are much lower than those of other pesticides and compounds (i.e., 4,4'-DDT = 0.001 µg/L), it is well known that commercial laboratories cannot achieve the same (lower) detection limits for dieldrin or total PCBs as for other organochlorine pesticides.

3.1.2 Fall 2014

3.1.2.1 Field Data

On November 2, 2014, water samples and water quality measurements were collected at 22 predetermined locations through the Port of Los Angeles, Port of Long Beach, and Eastern San Pedro Bay (Figure 6). Measurements of DO, pH, salinity, and temperature were collected using a multi-parameter water quality instrument. Results were within expected ranges: pH ranged from 7.8 to 8.2 units, salinity ranged from 31.9 to 33.9 ppt, and temperature ranged from 17.7 to 20.1 °C (Table 11). Measurements of DO ranged from 3.9 to 8.2 mg/L. DO below 5.0 mg/L are considered an exceedance of water quality criteria in accordance with the Basin Plan (RWQCB 1994). During this sampling event, DO was measured at Consolidated Slip at 4.3 to 4.6 mg/L, Station 2 adjacent to Consolidated Slip at 4.3 to 4.8 mg/L, and at both stations within LARE at 3.9 to 4.0 mg/L. The sampling event occurred within 24 hours of the first measurable rain storm of the winter. Low DO occurred in two areas likely to have the greatest influence from the storm. Each station's coordinates and water depth were recorded. Field forms are provided in Appendix A-1.

3.1.2.2 Laboratory Data

Water samples were analyzed for several conventional parameters, total and dissolved metals, organochlorine pesticides, and PCB congeners. Analytical results are presented in Table 12. The number and percentage of exceedances relative to CTR criteria for all samples collected within the Greater Harbor Waters is also shown in Table 12. Dissolved copper at Station 21 in LARE had a concentration of 4.48 µg/L, which exceeded CTR criteria (aquatic life; representing only 4% of all samples collected). Both toxaphene and dieldrin were not detected in any water samples above the MDL; however, the MDL for both compounds was elevated above the TMDL target, which indicates that there is some uncertainty in the determination of exceedance for this analyte. Water sample chemistry reports are available in Appendix B-1.

3.1.3 Winter 2015

3.1.3.1 Field Data

On February 23, 2015, water samples and water quality measurements were collected at 22 predetermined locations through the Port of Los Angeles, Port of Long Beach, and Eastern San Pedro Bay (Figure 7). Measurements of DO, pH, salinity, and temperature were collected using a multi-parameter water quality instrument. Results were within expected ranges: pH ranged from 7.5 to 8.2 units, salinity ranged from 20.2 to 35.9 ppt, and temperature ranged from 16.1 to 17.4 °C (Table 13). Measurements of DO ranged from 3.0 to 9.4 mg/L. During this sampling event, DO was measured at both stations within LARE at to 4.2 mg/L. The sampling event occurred within 24 hours of the first measurable rain storm of the winter. Low DO occurred in two areas likely to have the greatest influence from the storm. Each station's coordinates and water depth were recorded. Field forms are provided in Appendix A-1.

3.1.3.2 Laboratory Data

Water samples were analyzed for several conventional parameters, total and dissolved metals, organochlorine pesticides, and PCB congeners. Analytical results are presented in Table 14. The number and percentage of exceedances relative to CTR criteria for all samples collected within the Greater Harbor Waters is also shown in Table 14. Dissolved copper exceeded CTR criteria (aquatic life) at three locations (representing 13% of all samples collected): Station 1 in Consolidated Slip had a concentration of 4.62 µg/L, Station 10 in Cabrillo Marina had a concentration of 7.55 µg/L, and Station 12 in Inner Harbor Long Beach had a concentration of 3.35 µg/L. Both toxaphene and dieldrin were not detected in any water samples above the MDL; however, the MDL for both compounds was elevated above the TMDL target, which indicates that there is some uncertainty in the determination of exceedance for this analyte. Water sample chemistry reports are available in Appendix B-1.

3.1.4 Summer 2015

3.1.4.1 Field Data

On July 7, 2015 water samples and water quality measurements were collected at 22 predetermined locations through the Port of Los Angeles, Port of Long Beach, and Eastern

San Pedro Bay (Figure 8). Measurements of DO, pH, salinity, and temperature were collected using a multi-parameter water quality instrument. Results were within expected ranges: pH ranged from 7.6 to 8.2 units, salinity ranged from 25.2 to 38.8 ppt, and temperature ranged from 13.1 to 19.5 °C (Table 15). Measurements of DO ranged from 3.2 to 11.0 mg/L. DO below 5.0 mg/L are considered an exceedance of water quality criteria in accordance with the Basin Plan (RWQCB 1994). During this sampling event, DO was measured at Station 22 in LARE at 3.3 to 3.4 mg/L, at Station 7 in Fish Harbor from 3.2 to 3.9 mg/L, and three stations of Los Angeles Inner Harbor from 3.2 to 4.5 mg/L. At all Los Angeles Inner Harbor stations and Fish Harbor, depressed values were determined to be a result of inaccurate readings from the DO sensor. Corrective actions were taken, and subsequent monitoring shows DO values within normal ranges. DO readings at these specific stations are biased low and not representative of actual conditions. Each station's coordinates and water depth were recorded. Field forms are provided in Appendix A-1.

3.1.4.2 Laboratory Data

Water samples were analyzed for several conventional parameters, total and dissolved metals, organochlorine pesticides, and PCB congeners. Analytical results are presented in Table 16. The number and percentage of exceedances relative to CTR criteria for all samples collected within the Greater Harbor Waters is also shown in Table 16. Dissolved copper at Station 10 in Cabrillo Marina had a concentration of 8.65 µg/L, which exceeded CTR criteria (aquatic life; representing 4% of all samples collected).

Both toxaphene and dieldrin were not detected in any water samples above the MDL; however, the MDL for both compounds was elevated above the TMDL target, which indicates that there is some uncertainty in the determination of exceedance for this analyte. Water sample chemistry reports are available in Appendix B-1.

3.2 Sediment

3.2.1 Field Data

Chemistry, benthic infauna, and sediment toxicity were collected at 41 stations in the Greater Harbor Waters as part of the Bight '13 sampling program with required sample locations to support TMDL compliance monitoring. Only results from 30 stations located in

Los Angeles and Long Beach Harbor are available at this time and are presented in this report. The remaining results will be presented in a subsequent annual report, once available. Station names, waterbodies, and station coordinates are available in Table 17 and illustrated in Figure 9. At least one Bight '13 station is located within each of the Harbor Toxics TMDL-specified waterbodies. Sediment field forms are available in Appendix B of the Amec Foster Wheeler 2015 report.

3.2.2 Lab Data

3.2.2.1 Chemistry

Sediment chemistry results were compared to ERL sediment targets and the fish-associated sediment targets. The number and percentage of exceedances relative to the sediment targets for all samples collected within the Greater Harbor Waters are provided and totaled in Table 18. All metals tested (cadmium, chromium, copper, lead, mercury, and zinc) had at least one exceedance relative to either target. Four out of 30 cadmium samples, 5 out of 30 chromium samples, 26 out of 30 copper samples, 6 out of 30 lead samples, 26 out of 30 mercury samples, and 12 out of 30 zinc samples exceeded the ERL targets. For semivolatile organics, acenaphthene and anthracene exceeded the ERL in one sediment sample located in Inner Long Beach Harbor (at station B13-8399). For pesticides, 2 out of 30 4,4'-DDD samples and 9 out of 30 4,4'-DDE exceeded the sediment ERL. Dieldrin was not detected in any sediment samples above the MDL; however, the dieldrin MDL of 0.05 µg/kg was elevated above the ERL target value of 0.02 µg/kg, which indicates there is some uncertainty in the determination of exceedance for this analysis. Seven percent of total chlordane samples, 40% of total DDT samples, and 23% of total PCB congeners samples exceeded at least one of the sediment targets. Sediment sample chemistry reports are available in Appendix D of the Amec Foster Wheeler 2015 report.

3.2.2.2 Toxicity

Preliminary³ sediment toxicity showed a range in *M. galloprovincialis* survival ranging from 58.1 to 95.4%. *E. estuarius* survival ranged from 77.0 to 98.0%. Preliminary sediment toxicity test results are presented in Table 19.

3.2.2.3 Benthic

The total number of taxa per station ranged from 30 to 81 species. The number of mollusk taxa ranged from 1 to 27 species, while the number of crustacean taxa ranged from 3 to 14 species. Consolidated Slip contained the fewest number of taxa (30 species) and fewest mollusk taxa (1 species), whereas the Outer Long Beach Harbor contained the station (B13-8360) with the most overall taxa identified (81 species) and the most mollusk taxa (27 species). Inner Long Beach Harbor contained the stations (TMDL3-TB and B13-8399) with the lowest number of crustacean taxa identified (3 species), and Inner Los Angeles Harbor and Cabrillo Beach contained the stations (B13-8367 and B13-8306) with the highest number of crustacean taxa (14 species). Station composition of sensitive taxa ranged from 6.1 to 41.5%. Cabrillo Marina (TMDL-CH) had the lowest percent of sensitive taxa (6.1%) whereas Cabrillo Beach (B13-8306) had the highest percent of sensitive taxa (41.5%). Results by station and waterbody are provided in Table 20. The top ten most abundant species in the harbor included seven species of annelids, one mollusk, and two arthropods (Amec Foster Wheeler 2015). A full list of benthic species identified by station are provided in Appendix C (Amec Foster Wheeler 2015).

3.2.3 Sediment Quality Objectives

3.2.3.1 Direct Effects LOE Assessments

Sediment quality from Port of Los Angeles and Port of Long Beach was assessed using California's SQOs as described in the *Final Staff Report, Water Quality Control Plan for Enclosed Bays and Estuaries* (SWRCB-Cal EPA 2008). These SQOs are based on a MLOE approach in which the LOE are sediment chemistry (Table 21), benthic community condition (Table 22), and sediment toxicity (Table 23). The sediment chemistry LOE score ranged from low exposure to high exposure for all stations sampled within the harbor. The

³ Data are presented as "preliminary" at the request of SCCWRP until the Bight '13 reports are completed and made publicly available. All data used in this assessment have been validated and passed a quality assurance/quality control review.

benthic community LOE showed low disturbance at 22 out of 24 stations. One station exhibited reference conditions (in Inner Long Beach Harbor), and one station showed moderate disturbance (in Inner Long Beach Harbor). The toxicity LOE ranged from nontoxic to low toxicity for all stations within the harbor.

3.2.3.2 *Direct Effects Integrated Station Assessment*

The severity of biological effects (i.e., integration of toxicity LOE and benthic condition LOE categories) and the potential for chemically mediated effects (i.e., the integration of the toxicity LOE and chemistry LOE categories) were used to determine the station level assessment. The station level assessment, along with the percent of sampling stations not in compliance per waterbody, is available in Table 24 and Figure 11. Thirteen stations were found to be unimpacted. Eleven stations were found to be likely unimpacted and six possibly impacted. No stations were found to be likely impacted or clearly impacted.

3.3 Tissue

Fish tissue samples were collected between September 29 and October 2, 2014, from four waterbodies (Consolidated Slip, Outer Los Angeles Harbor, Outer Long Beach Harbor, and Eastern San Pedro Bay; Figure 10). Fish were composited at Eurofins Calscience on October 8 and 15 (as indicated in the composite sample ID names). Additional fish, collected as part of a special study conducted by the Ports of Long Beach and Los Angeles in accordance with the same methods and Programmatic Quality Assurance Project Plan (PQAPP), were provided by Amec Foster Wheeler on October 10 to overcome a shortage of fish collected in Consolidated Slip as part of the compliance monitoring efforts.

3.3.1 *Field Data*

A listing of the composite sample IDs, sample locations, and a summary of the field data (on a composite sample basis) for fish collected are presented in Table 25. Average lengths include the average length of all fish in the composite (sum of all total lengths of fish divided by number of fish in the composite). Average weights presented are the sum of the individual weights of all fish in a single composite divided by the number of fish in that respective composite. Average length and weight of fish per composite and total weight of each

composite are provided in Table 25. Fish tissue sampling field forms are available in Appendix C-2. Fish tissue sample chemistry reports are available in Appendix D-2.

3.3.1.1 Consolidated Slip

White croaker was the only species collected in Consolidated Slip and comprised of three composite samples. Average lengths of white croaker in composites ranged from 201.3 to 262 mm and weighed an average of 102.5 to 230 grams (g; Table 25).

3.3.1.2 Outer Los Angeles Harbor

California halibut, white croaker, and white surfperch were collected in the Outer Los Angeles waterbody near Cabrillo Pier. Average lengths of California halibut caught near Cabrillo Pier in composites ranged from 275.9 to 678.5 mm. The average weight of individual fish in composites for California halibut ranged from 181.4 to 3,500 g. Average lengths of white croaker caught near Cabrillo Pier in composites ranged from 213.5 to 224.3 mm and weighed an average of 97.5 to 157.5 g. White surfperch average lengths in composites ranged from 94.9 to 112.6 mm. Since some white surfperch were too light to register on the fish scale, composite sample weights could not be calculated.

3.3.1.3 Eastern San Pedro Bay

California halibut, California lizardfish, white croaker, northern anchovy, and Pacific pompano were collected in Eastern San Pedro Bay. California halibut, white croaker, and Pacific pompano were the only fish species for this waterbody that were used in chemical analysis. Pacific pompano was selected as a potential alternative prey species in the field and was used because white surfperch and northern anchovy were not caught in high enough abundance for tissue analysis. California halibut ranged from 242 to 570 mm total length and weighed 130 to 1680 g. White croaker ranged from 220 to 253 mm total length and weighed 100 to 190 g. Pacific pompano ranged from 82 to 165 mm total length and weighed 20 to 80 g (Table 25).

3.3.1.4 *Outer Long Beach Harbor*

California halibut, California lizardfish, white croaker, and white surfperch were collected in Outer Long Beach. California halibut, white croaker, and white surfperch were the only fish species for this waterbody that were used in chemical analysis. Average lengths of California halibut in composites ranged from 250.7 to 400 mm and weighed an average of 140 to 723.3 g. Average lengths of white croaker ranged from 213 to 231 mm and weighed an average of 120 to 127.5 g. Average lengths of white surfperch in composites ranged from 108.5 to 212 mm and weighed an average of 50 to 130 g (Table 25).

3.3.1.5 *Eastern San Pedro Bay*

California halibut, California lizardfish, white croaker, northern anchovy, and Pacific pompano were collected in Eastern San Pedro Bay. California halibut, white croaker, and Pacific pompano were the only fish species for this waterbody that were used in chemical analysis. Pacific pompano was selected as a potential alternative prey species in the field and was used because white surfperch and northern anchovy were not caught in high enough abundance for tissue analysis. Average lengths of California halibut in composites ranged from 270.25 to 513 mm and weighed an average of 182.5 to 1292.5 g. Average lengths of white croaker in composites ranged from 225.3 to 249 mm and weighed an average of 122.5 to 175 g. Average lengths of Pacific pompano in composites ranged from 98.1 to 157.9 mm and weighed an average of 26.7 to 65.7 g (Table 25).

3.3.2 *Lab Data*

Tissue chemistry results, including a summary of the number and percentage of samples that exceed FCG values per analyte, are presented in Table 26. A summary of the number of samples that exceed FCG values per waterbody is presented in Table 27.

3.3.2.1 *Consolidated Slip*

White croaker lipid content ranged from 1.8 to 3.2%. Dieldrin and toxaphene were not detected in white croaker from Consolidated Slip. One white croaker composite sample exceeded the total chlordane FCG value (5.6 µg/kg) with an estimated concentration of 20.6 µg/kg. All three white croaker composite samples exceeded the total DDT and total PCB

FCG values (21 µg/kg and 3.6 µg/kg, respectively) with concentrations ranging from 60.8 to 259 µg/kg for total DDTs and 56.5 to 194 µg/kg for total PCBs.

3.3.2.2 *Outer Los Angeles Harbor*

Lipid content ranged from 3.4 to 5.6% for white croaker, 0.18 to 0.33% for California halibut, and 1.2 to 2.1% for white surfperch. Dieldrin and toxaphene were not detected in any of the fish collected near Cabrillo Pier in Outer Los Angeles Harbor. Total chlordane was estimated at concentrations below the FCG value in all fish. California halibut did not exceed the FCG value for total DDTs; however, white croaker and white surfperch did exceed total DDT FCG values with concentrations ranging from 94.7 to 122 µg/kg and 40.3 to 71.7 µg/kg, respectively. All three composite samples for each fish species exceeded the total PCB FCG value with concentrations ranging from 9.50 to 11.1 µg/kg in California halibut, from 58.6 to 66.5 µg/kg for white croaker, and from 35.1 to 55.8 µg/kg in white surfperch.

3.3.2.3 *Outer Long Beach Harbor*

Lipid content ranged from 3.7 to 7.2% for white croaker, 0.25 to 0.38% for California halibut, and 2 to 7.4% for white surfperch. Dieldrin and toxaphene were not detected in any of the fish collected in Outer Long Beach Harbor. Total chlordane was estimated at concentrations below the FCG value in all fish. California halibut did not exceed the FCG value for total DDTs; however, white croaker and white surfperch did exceed total DDT FCG values with concentrations ranging from 121 to 214 µg/kg and 89.2 to 178 µg/kg, respectively. All three composite samples for each fish species exceeded the total PCB FCG value with concentrations ranging from 11.5 to 17.0 µg/kg in California halibut, from 103 to 135 µg/kg for white croaker, and from 86.3 to 229 µg/kg in white surfperch.

3.3.2.4 *Eastern San Pedro Bay*

Lipid content ranged from 2.4 to 5.2% for white croaker, 0.24 to 0.35% for California halibut, and 2.4 to 7.7% for Pacific pompano. Dieldrin and toxaphene were not detected in any of the fish collected in Eastern San Pedro Bay with the exception of one California halibut sample with an estimated dieldrin concentration below the FCG value. Total chlordane was below the FCG value in all California halibut and Pacific pompano composite samples. Total chlordane was detected in concentrations greater than the FCG value in two of the three

white croaker composite samples with estimated concentrations ranging from 8 to 8.9 µg/kg. California halibut did not exceed the FCG value for total DDTs; however, white croaker and Pacific pompano did exceed total DDT FCG values with concentrations ranging from 33.7 to 95.6 µg/kg and 41.1 to 135 µg/kg, respectively. With the exception of one California halibut composite sample, all remaining composite samples for each fish species exceeded the total PCB FCG value with concentrations ranging from 6.65 to 19.8 µg/kg in California halibut, from 58.3 to 141 µg/kg for white croaker, and from 29.8 to 57.4 µg/kg in Pacific pompano.

3.4 Deviations from the Sampling and Analysis Plan

3.4.1 Water Quality – Summer 2014

No deviations from the proposed SAP occurred.

3.4.2 Water Quality – Fall 2014

- The YSI cable was cut from a passing watercraft. Stations 19 and 20 are missing water quality parameter data.
- Station 21 was too shallow for measurements to be collected at mid and bottom depths.

3.4.3 Water Quality – Winter 2015

No deviations from the proposed SAP occurred.

3.4.4 Water Quality – Summer 2015

No deviations from the proposed SAP occurred.

3.4.5 Sediment Sampling – 2014

- Station B13-8309 within the Port of Los Angeles was abandoned per Bight '13 protocol due to collection failure due to a hard surface. It was replaced with a pre-determined overdraw station, B13-8365, in the Port of Long Beach.

3.4.6 Fish Tissue – 2014

- The minimum total length of California halibut caught and sampled was 8.7 inches (222 mm), which deviated from the minimum targeted length of 22 inches (559 mm).
- Sampling occurred from September 29 and extended to October 2, 2014, deviating from the targeted sampling dates of July 1 to September 30. Additional white croaker samples were supplied by Amec Foster Wheeler and collected on October 10.
- Pacific pompano was also collected as a potential alternative prey species, as few shiner surfperch and white surfperch were collected in Eastern San Pedro Bay.
- Tissue homogenization duplicates were not analyzed by the laboratory.

4 DATA QUALITY ASSESSMENT

4.1 Field Data Quality

Field data quality assurance (QA) measures outlined in the PQAPP were followed. Field duplicate samples were collected at a 5% frequency, as proposed by the PQAPP. Results of the field replicates are included in the data validation reports in Appendix D. Most results were within the project-required control limit of less than or equal to 25% relative percent difference (RPD). In cases where one of the samples or duplicate results fell below five times the method reporting limit (MRL), the RPD data quality objective (DQO) did not apply. In these cases, the difference between the two results needed to be less than two times the MRL in order to meet project DQOs. Field and rinsate blanks were collected with each water quality sampling event. No PCB congeners or pesticides were detected in the field and rinsate blanks. Some total and dissolved metals were detected in the blanks. Most detections were less than two times the MRL. Field and equipment blank detections are summarized in the data validation reports in Appendix D.

4.2 Analytical Data Quality

DQOs and QA procedures are provided in the PQAPP (Anchor QEA 2014b) and in the individual SAPs for each matrix (Anchor QEA 2014c, 2014d, 2015e). All data were validated according to Stage 2A guidelines (USEPA 2009). All data qualifiers applied to the data during final validation have been incorporated into the database for this project. Data were considered useable as reported or as qualified. Data qualifiers assigned during data validation include the following:

- “J” indicates that the associated numerical value is an estimated concentration.
- “U” indicates a reporting limit below which the analyte was not detected.
- “UJ” indicates an approximate reporting limit below which the analyte was not detected.

No data were rejected as a result of the validation process. Certain data were qualified as estimated values for a particular analysis based on a specified protocol or technical advisory, as stated in the data validation reports (Appendix D).

Overall, reporting limits were deemed acceptable to meet project objectives. Reporting limits for undetected results usually met or were below the target reporting limits specified in the SAPs. Some results were qualified as non-detect at raised reporting limits due to method blank contamination.

4.3 Data Completeness

Data completeness includes collection of required samples in the field and laboratory analysis for target chemicals as outlined in the project SAPs (Anchor QEA 2014c, 2014d, 2014e). All target samples were collected and submitted for the analyses specified in the SAPs.

Laboratory data completeness was measured by percentage of results reported by the analytical laboratory. Data completeness levels were set at 95% for all parameters, according to DQOs specified in the PQAPP (Anchor QEA 2014f). No data were rejected after data validation. DQOs were met with 100% completeness.

5 SUMMARY

This annual report presents results from water quality, sediment quality, and fish tissue quality monitoring activities required as part of the Harbor Toxics TMDL compliance monitoring and reporting program. Key results and conclusions from these activities include the following:

5.1 Water Quality

In general, water quality continued to meet water quality objectives. In situ and physical parameters were all within expected ranges with the exception of dissolved oxygen in samples collected from the Consolidated Slip during the Fall 2014 event and from the Los Angeles River Estuary during the Winter and Summer 2015 events. Chemical results were all below applicable water quality criteria with the exception of dissolved copper and chlordane. Dissolved copper was the only parameter to exceed CTR criteria (aquatic life) in one or more samples collected from Consolidated Slip, Cabrillo Marina, Inner Long Beach Harbor, and LARE. Chlordane was the only parameter to exceed CTR criteria (human health) in one or more samples from Inner Long Beach Harbor, Outer Long Beach Harbor, and Eastern San Pedro Bay.

5.2 Sediment Quality

Coordinated with the Bight '13 program, sediment results for the individual lines of evidence from the Los Angeles and Long Beach Harbors showed the following:

- Chemistry
 - Metals tended to be measured at concentrations greater than ERL values
 - Organics, including total PCBs and total DDXs, were occasionally measured at concentrations greater than ERL values or fish-associated sediment targets
- Benthic
 - The total number of taxa per station ranged from 30 to 81 species
 - The top ten most abundant species in the harbor included seven species of annelids, one mollusk, and two arthropods

- Toxicity
 - Sediment toxicity showed a range in *M. galloprovincialis* survival ranging from 58.1 to 95.4% and *E. estuarius* survival ranging from 77.0 to 98.0%

Using the sediment results from the individual lines of evidence, the SQO assessment for the Los Angeles and Long Beach Harbor stations determined 13 stations to be unimpacted, 11 to be likely unimpacted, and six to be possibly impacted. No stations were found to be likely impacted or clearly impacted.

A complete dataset of sediment quality results has not been made publically available from SCCWRP for Eastern San Pedro Bay; therefore, these results will be presented in a subsequent annual report, once received.

5.3 Tissue Quality

Total PCBs were measured at concentrations greater than the FCG in all fish from all stations (except one California halibut sample from Eastern San Pedro Bay). Total DDXs were measured at concentrations greater than the FCG in all white croaker and white surfperch or Pacific pompano at all stations. Total DDXs were not measured at concentrations greater than the FCG in any of the California halibut samples. Total chlordane was measured at concentrations greater than the FCG in only three samples.

TABLES

Table 1
Sediment Quality 303(d) Listings for Harbor Waters

| Waterbody | Pollutants Requiring TMDL (Sediment and/or Tissue) | Other Requirements |
|---|--|--|
| Los Angeles/Long Beach Inner Harbor | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Metals (Copper, Zinc), Benzo(a)pyrene, Chrysene | Toxicity and benthic community effects |
| Los Angeles/Long Beach Outer Harbor | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: None | Toxicity |
| Los Angeles Harbor – Inner Cabrillo Beach | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Metals | None |
| Los Angeles Harbor – Cabrillo Marina | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Benzo(a)pyrene, Pyrene | None |
| Los Angeles Harbor – Fish Harbor | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Metals (Copper, Lead, Mercury, Zinc), Chlordane, DDT, PCBs, PAHs (Benzo[a]pyrene, Phenanthrene, Benzo[a]anthracene, Chrysene, Pyrene, Dibenzo[a,h]anthracene) | Toxicity |
| Consolidated Slip | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Metals (Cadmium, Copper, Chromium, Lead, Zinc, Mercury), Chlordane, DDT, PCBs, PAHs (Benzo[a]pyrene, 2-methyl-naphthalene, Phenanthrene, Benzo[a]anthracene, Chrysene, Pyrene) | Toxicity and benthic community effects |
| San Pedro Bay | Tissue: Chlordane, Dieldrin, DDT, PCBs, Toxaphene Sediment: Metals, Chlordane, PAHs, DDT | Toxicity |
| Los Angeles River Estuary | Tissue: None Sediment: Metals, Chlordane, DDT, PCBs | Toxicity |

Notes:

Bold pollutants are required by the Harbor Toxics TMDL.

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyl

TMDL = Total Maximum Daily Load

Table 2
Sediment Toxicity Categorization Values for *Eohaustorius estuarius*

| % Survival of <i>E. estuarius</i> in Project Sediment | | Category |
|---|---|-------------------|
| If Significantly Different than Control Survival | If Not Significantly Different from Control | |
| 90 – 100 | 82 – 100 | Nontoxic |
| 82 – 89 ¹ | 59 – 81 ¹ | Low Toxicity |
| 59 – 81 ¹ | NA | Moderate Toxicity |
| < 59 ¹ | < 59 ¹ | High Toxicity |

Notes:

1 = These values are the percentage of control survival

NA = Not applicable

Table 10
Summer 2014 Water Quality Chemistry Results

Notes:

*The total suspended solid results for samples collected from mid-depth and bottom depth are respectively labelled as "-M-" and "-B-" preceding the sample ID date. They are not direct results of the surface sample IDs indicated in the column headers in this Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (US Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDx is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total PCB congeners is the sum of all PCB congeners listed in this table.

USEPA Stage 2A data validation was completed by Anchor QEA.

■ Detected concentration is greater than California Toxics Rule Saltwater Continuous Concentration screening level

■ Detected concentration is greater than the Criteria for Protection of Human Health

Italics= Non-detected concentration is above one or more identified screening levels

Bold = detected result

µg/L = micrograms per liter

-- = results not reported or not applicable

FD = field duplicate

J = estimated value

mg/L = milligrams per liter

N = normal environmental sample

NAD = North American Datum

PCB = polychlorinated biphenyls

U = compound analyzed, but not detected above detection limit

USEPA = U.S. Environmental Protection Agency

WO = ocean water matrix

WQ = water quality

Table 12
Fall 2014 Water Quality Chemistry Results

Notes:

*The total suspended solid results for samples collected from mid-depth and bottom depth are respectively labeled as "-M-" and "-B-" preceding the sample ID date. They are not direct results of the surface sample IDs indicated in the column headers in this spreadsheet.

Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (US Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDX is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total PCB congeners is the sum of all PCB congeners listed in this table.

USEPA Stage 2A data validation was completed by Anchor QEA.

 Detected concentration is greater than California Toxics Rule Saltwater Continuous Concentration screening level

 Detected concentration is greater than the Criteria for Protection of Human Health

Italics = Non-detected concentration is above one or more identified screening levels

Bold = detected result

-- = results not reported or not applicable

µg/L = micrograms per liter

FD = field duplicate

J = estimated value

m = meters

mg/L = milligrams per liter

N = normal environmental sample

NAD = North American Datum

PCB = polychlorinated biphenyls

U = compound analyzed but not detected above detection limit

USEPA = U.S. Environmental Protection Agency

WO = ocean water matrix

WQ = water quality

Table 14
Winter 2015 Water Quality Chemistry Results

Notes:

*The total suspended solid results for samples collected from mid-depth and bottom depth are respectively labelled as "-M-" and "-B-" preceding the sample ID date. They are not direct results of the surface sample IDs indicated in the column headers in this spreadsheet.

Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (US Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDx is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total PCB congeners is the sum of all PCB congeners listed in this table.

USEPA Stage 2A data validation was completed by Anchor QEA.

 Detected concentration is greater than California Toxics Rule Saltwater Continuous Concentration screening level

 Detected concentration is greater than the Criteria for Protection of Human Health

Italics = Non-detected concentration is above one or more identified screening levels

Bold = detected result

-- = results not reported or not applicable

ug/L = micrograms per liter

FD = field duplicate

J = estimated value

m = meters

mg/L = milligrams per liter

N = normal environmental sample

NAD = North American Datum

PCB = polychlorinated biphenyls

U = compound analyzed, but not detected above detection limit

USEPA = U.S. Environmental Protection Agency

WO = ocean water matrix

WQ = water quality

Table 16
Summer 2015 Water Quality Chemistry Results

Notes:

*The total suspended solid results for samples collected from mid-depth and bottom depth are respectively labelled as "-M-" and "-B-" preceding the sample ID date. They are not direct results of the surface sample IDs indicated in the column headers in this spreadsheet.

Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (US Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDX is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total PCB congeners is the sum of all PCB congeners listed in this table.

USEPA Stage 2A data validation was completed by Anchor QEA.

 Detected concentration is greater than California Toxics Rule Saltwater Continuous Concentration screening level

 Detected concentration is greater than the Criteria for Protection of Human Health

Italics = Non-detected concentration is above one or more identified screening levels

Bold = detected result

-- = results not reported or not applicable

µg/L = micrograms per liter

FD = field duplicate

J = estimated value

m = meters

mg/L = milligrams per liter

N = normal environmental sample

NAD = North American Datum

PCB = polychlorinated biphenyls

U = compound analyzed, but not detected above detection limit

USEPA = U.S. Environmental Protection Agency

WO = ocean water matrix

WQ = water quality control sample matrix

Table 18
2013 Sediment Chemistry Results

Notes:

Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (U.S. Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDX is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total LPAH (8 of 17) is the sum of 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, biphenyl, fluorene, naphthalene, and phenanthrene.

Total HPAH (9 of 17) is the sum of benzo(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, benzo(x)fluoranthenes, chrysene, dibenzo(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, and pyrene.

Total PAH (17) is the sum of total LPAH and total HPAH shown on this table.

Total PCB congeners is the sum of all PCB congeners listed in this table.

USEPA Stage 2A data validation was completed by Anchor QEA.

Duplicate samples are not included in exceedence totals

 Detected concentration is greater than ERL screening level

 Total suspended solids

 Non-detected concentration is above one or more identified screening levels

Bold = Detected result

-- = results not reported or not applicable

µg/kg = micrograms per kilogram

cm = centimeters

HPAH = high molecular weight PAH

J = estimated value

LPAH = low molecular weight PAH

mg/kg = milligrams per kilogram

N = normal environmental sample

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyl

pct = percent

SE = sediment matrix

U = compound analyzed but not detected above detection limit

UJ = compound analyzed but not detected above estimated detection limit

Notes:

Source: Amec Foster Wheeler (2015)

Integrated benthic community score calculated as the median score of the four benthic indices (IBI, RBI, BRI, and RIVPACS)

BRI = Benthic Response Index

IBI = Index of Biotic Integrity

LOE = line of evidence

RBI = Relative Benthic Index

RIVPACS = River Invertebrate Prediction and Classification System

SQO = Sediment Quality Objective

TMDL = total maximum daily load

Table 23

Table 26
2014 Fish Tissue Chemistry Results

Notes:

Horizontal coordinate datum is NAD 1983 State Plane California V FIPS 0405 (U.S. Survey Feet).

All undetect results are reported at the method detection limit.

Totals (U=0) are calculated as the sum of all detected results. If all results are not detected, half of the highest reporting limit value is reported as the sum.

Total chlordane is the sum of alpha-chlordane, beta-chlordane, gamma-chlordane, cis-nonachlor, trans-nonachlor, and oxychlordane.

Total DDx is the sum of 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, 2,4'-DDD, 2,4'-DDE, and 2,4'-DDT, if measured.

Total PCB congeners is the sum of all PCB congeners listed in this table.

U.S. Environmental Protection Agency Stage 2A data validation was completed by Anchor QEA.

 Detected concentration is greater than TMDL Fish Tissue Target screening level

 Non-detected concentration is above one or more identified screening levels

Bold = Detected result

-- = results not reported or not applicable

µg/kg = micrograms per kilogram

J = estimated value

N = normal environmental sample

PCB = polychlorinated biphenyl

pct = percent

U = compound analyzed but not detected above detection limit

UJ = compound analyzed but not detected above estimated detection limit

| DQO Met? (Y/N) ² | | | | | | | |
| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

| DQO Met? (Y/N) ² | | | | | | | |
| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

| DQO Met? (Y/N) ² | | | | | | | |
| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

| DQO Met? (Y/N) ² | | | | | | | |
| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

Comments (include photographs taken, if any): clear, no particulates/sheen/color
* strong wind, may be 714m due to angle of lines

- Notes:
- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. These measurements will be recorded on the next page.
 - Description should include suspended or floating material, color, odor, or sheen.

| DQO Met? (Y/N) ² | | | | | | | |
| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

| Comments: | | | | | | | |

Notes:

- Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the three results, the difference between the largest and smallest result, and the percent difference between the largest and smallest result. The percent difference will be calculated as follows:

$$\text{Percent difference} = 100 * (\text{largest} - \text{smallest}) / \text{average}$$

Triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be compared against the precision criteria established for field measurements in Table 7.

- If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

APPENDIX A-2

SEDIMENT SAMPLING FIELD FORMS

APPENDIX B

FIELD DATA SHEETS

This page intentionally left blank

FIELD SAMPLING QA CHECKLIST

Station Location: B13-8318

Arrival Date/Time: 7/13/13 1056

Site Acceptable for Sampling: (Y) or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | Y |
| Station DGPS coordinates (± 3 m) recorded. | Y |
| Station occupation form completed | Y |

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight'13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight' 13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | + |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

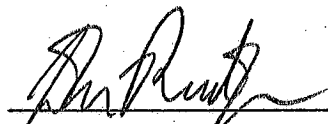

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

FIELD SAMPLING QA CHECKLIST

Station Location: B13-8333

Arrival Date/Time: 7/13/13 0730

Site Acceptable for Sampling: (Y) or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | Y |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight'13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | F |
| Samples collected in the following order: infaunal, chemistry, toxicity | F |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | F |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | F |
| Staff avoided contaminating samples at all times | F |
| COC seals have been placed over individual sample bottles | F |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

- Grab Fail codes: None, Outside Radius Limit, Outside Target Depth, Premature closure, Flipped, Rocks/gravel, Dead shell, Live animal (comment req.), Debris (comment req.), Poor closure - other (comment req.), Heavily Canted, Large Humping, Washed, Disturbed Surface, < 5 cm Penetration, <= 7 cm Penetration - biology only

FIELD SAMPLING QA CHECKLIST

Station Location: B13-8399

Arrival Date/Time: 7/12/13 1350

Site Acceptable for Sampling: (Y) or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | Y |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight' 13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

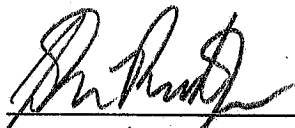

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

- Sediment Composition: Coarse sand, Fine sand, Silt/clay, Gravel, Cobble, Mixed
 - Sediment Odor: None (N), Petroleum (P), Hydrogen sulfide (HS), Humic (HU), Other (O, describe in comments)
 - Sediment Color: Brown, Gray, Black, Olive green, Red
 - Directions: N, NE, E, SE, S, SW, W, NW, or XX for calm
 - Station Fail codes: None, Temporary - sea conditions (comment req.), Temporary - atmosphere (comment req.), Temporary - mechanical (comment req.), Pre-abandoned (comment req.), Site On Land (comment req.), Vessel safety (comment req.), No Access Allowed (comment req.), Prolonged rough seas, Bottom salinity <25psu, Too Shallow (comment req.), Too many Event Failures (comment req.), Anthropogenic obstruction (comment req.), Natural hard bottom obstructions (comment req.), Not sampleable - other (comment req.)
- Grab Fail codes: None, Outside Radius Limit, Outside Target Depth, Premature closure, Flipped, Rocks/gravel, Dead shell, Live animal (comment req.), Debris (comment req.), Poor closure - other (comment req.), Heavily Canted, Large Humping, Washed, Disturbed Surface, < 5 cm Penetration, <= 7 cm Penetration - biology only

FIELD SAMPLING QA CHECKLIST

Station Location: B13-8340

Arrival Date/Time: 7/12/13 0818

Site Acceptable for Sampling: (Y) or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | N |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

float

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight'13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

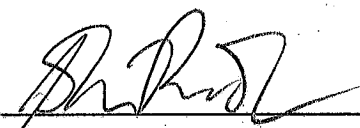

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

FIELD SAMPLING QA CHECKLIST

Station Location: TMDL2-FH, TMDL5-DT Arrival Date/Time: 7/11/13 NOV

Site Acceptable for Sampling: Y or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | Y |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight' 13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | Y |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

FIELD SAMPLING QA CHECKLIST

Station Location: B13-8316

Arrival Date/Time: 7/11/13 10¹⁵

Site Acceptable for Sampling: Y or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | N |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

float

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight '13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

FIELD SAMPLING QA CHECKLIST

Station Location: B13-#302 Arrival Date/Time: 08/11

Site Acceptable for Sampling: Y or N If No, reason: _____

Mark each box with Y, N, or NA

Field Procedures

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | N |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

float

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight' 13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | Y |
| Site replicate (i.e., duplicate) collected (if applicable) | 1 |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | Y |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | Y |

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | Y |
| Chemistry samples properly stored on dry ice | Y |
| Infaunal samples properly relaxed and preserved with formalin | Y |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion Y

1. Upon arriving at the sampling location, the following site observations are recorded:

| | |
|--|---|
| Is site accessible? | Y |
| Depth and benthic salinity recorded. Within limits? (>3m embayments; ≥25pt salinity) | Y |
| Vessel has been anchored (or tied off) | |
| Station DGPS coordinates (± 3 m) recorded | Y |
| Station occupation form completed | Y |

2. Sampling procedures:

| | |
|---|---|
| Field staff wearing fresh, powder free nitrile gloves | Y |
| Equipment washed/rinsed from previous station | Y |
| Vessel engine has been shut off for 5 minutes prior to sampling | Y |
| Sampling instrument washed with Alconox | Y |
| Sampling instrument given site water rinse prior to deployment | Y |
| Sample bottles correctly labeled (minimum: station id, date, agency, parameter) | Y |
| Sample bottles are lab certified, contaminant free | Y |
| Samples containers are the correct type in accordance with Table 5-2 in the Bight' 13 QAM | Y |
| Sample condition meets acceptability criteria (e.g. no surface disturbance, leakage, canting, or washing) | Y |
| Sample penetration meets acceptability criteria (e.g. minimum 5cm for chem/tox; 7cm for infauna) | Y |
| Record grab disposition / characteristic information | Y |
| Samples collected in the following order: infaunal, chemistry, toxicity | Y |
| Chem/Tox samples collected from top 5cm, and 1cm from sides of grab | Y |
| Sediment evenly distributed among containers | Y |
| Stainless steel scoop used to distribute sediment | Y |
| Staff avoided contaminating samples at all times | Y |
| COC seals have been placed over individual sample bottles | |
| Site replicate (i.e., duplicate) collected (if applicable) | — |

FIELD SAMPLING QA CHECKLIST

3. Data Recording:

| | |
|---|---|
| Photo of sample grab(s) taken | ✓ |
| Samples properly logged on COC form | |
| Proper persons have signed the COC | |
| Field notes have been recorded for site before moving to the next | ✓ |

4. Sample Storage:

| | |
|---|---|
| Toxicity samples properly stored on wet ice | ✓ |
| Chemistry samples properly stored on dry ice | ✓ |
| Infaunal samples properly relaxed and preserved with formalin | ✓ |
| Cooler is taped shut for transport to lab | |
| Completed COC is included in plastic bag in cooler | |

5. PPE properly removed and disposed of upon station completion _____

Notes:

1. Field measurements will be made in triplicate on 5 percent of measurements to ensure project DQOs are met. Each result will be recorded along with the average of the triplicate measurements, the average of the results, and percent difference will be recorded on the field data sheet. The percent difference, as appropriate, will be computed as: $100 * (\text{largest} - \text{smallest}) / \text{average}$
2. If no, write corrective actions taken in the comments box (e.g., re-calibrated instrument, etc.) and re-measure.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-02-1894Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 02/25/15. They were assigned to Work Order 15-02-1894.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Mission Viejo, CA 92691-8306

Date Received: 02/25/15
Work Order: 15-02-1894
Preparation: N/A
Method: SM 2540 D
Units: mg/L

Project: GWMA - TMDL Compliance Monitoring

Page 1 of 5

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CS-RW-01-G-S-20150224 | 15-02-1894-1-H | 02/24/15 08:57 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | ND | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CS-RW-01-G-M-20150224 | 15-02-1894-2-A | 02/24/15 08:57 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.9 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CS-RW-01-G-B-20150224 | 15-02-1894-3-A | 02/24/15 08:58 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 2.8 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-------------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CS-RW-1001-G-S-20150224 | 15-02-1894-4-A | 02/24/15 08:57 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 3.0 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IA-RW-02-G-S-20150224 | 15-02-1894-5-H | 02/24/15 09:28 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.9 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IA-RW-02-G-M-20150224 | 15-02-1894-6-A | 02/24/15 09:32 | Sea Water | N/A | 03/02/15 | 03/02/15 18:00 | F0302TSSL4 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.8 | 1.0 | 0.95 | 1.00 | |

RL: Reporting Limit. DF: Dilution Factor. MDL: Method Detection Limit.

Quality Control - LCS/LCSD

ANCHOR QEA, LLC
27201 Puerta Real, Suite 350
Mission Viejo, CA 92691-8306

Date Received: 02/25/15
Work Order: 15-02-1894
Preparation: EPA 3510C
Method: EPA 8270C SIM PCB Congeners

Project: GWMA - TMDL Compliance Monitoring

Glossary of Terms and Qualifiers

Work Order: 15-02-1894

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDS or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 02/24/15. They were assigned to Work Order 15-02-1742.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-02-1742

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSO or PES/PESO associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Danielle Gonsman

From: Claire Dolphin [cdolphin@anchorqea.com]
Sent: Wednesday, February 25, 2015 4:32 PM
To: Danielle Gonsman
Cc: Andy Martin
Subject: Sample receipt confirmation analyses

Hi Danielle,

In regards to the anomalies with the samples received yesterday:

1. For the extra TSS bottle, please analyze it using the sample ID on the label (that is a correct name/time/date)
2. For any times that do not match the COC, please use the time on the LABEL, that will be the most accurate

Thank you for checking

Best,
Claire

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 02/25/15. They were assigned to Work Order 15-02-1895.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Mission Viejo, CA 92691-8306

Date Received: 02/25/15
Work Order: 15-02-1895
Preparation: N/A
Method: SM 2540 D
Units: mg/L

Project: GWMA - TMDL Compliance Monitoring

Page 1 of 5

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-12-G-S-20150224 | 15-02-1895-1-H | 02/24/15 08:46 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | ND | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-12-G-M-20150224 | 15-02-1895-2-A | 02/24/15 09:05 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.0 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-12-G-B-20150224 | 15-02-1895-3-A | 02/24/15 09:09 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | ND | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-13-G-S-20150224 | 15-02-1895-4-H | 02/24/15 09:35 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.0 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-13-G-M-20150224 | 15-02-1895-5-A | 02/24/15 09:52 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 1.6 | 1.0 | 0.95 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-13-G-B-20150224 | 15-02-1895-6-A | 02/24/15 09:57 | Sea Water | N/A | 03/02/15 | 03/02/15 17:00 | F0302TSSL6 |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-------------------------|--------|-----|------|------|------------|
| Solids, Total Suspended | 2.7 | 1.0 | 0.95 | 1.00 | |

RL: Reporting Limit. DF: Dilution Factor. MDL: Method Detection Limit.

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|--|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY FORM

SAMPLES - CONTAINERS & LABELS:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired – list sample ID(s) and test
- Insufficient quantities for analysis – list test
- Improper container(s) used – list test
- Improper preservative used – list test
- No preservative noted on COC or label – list test & notify lab
- Sample labels illegible – note test/container type
- Sample label(s) do not match COC – Note in comments
 - Sample ID
 - Date and/or Time Collected
 - Project Information
 - # of Container(s)
 - Analysis
- Sample container(s) compromised – Note in comments
 - Water present in sample container
 - Broken
- Sample container(s) not labeled
- Air sample container(s) compromised – Note in comments
 - Flat
 - Very low in volume
 - Leaking (Not transferred - duplicate bag submitted)
 - Leaking (transferred into Calscience Tedlar® Bag*)
 - Leaking (transferred into Client's Tedlar® Bag*)
- Other: _____

To: Danielle Gonsman
Subject: RE: Sample receipt confirmation analyses

Hi Danielle,

I just have terrible handwriting, I'm sorry. Everything labeled "OA" should be "OB"; the COC is correct for your samples # 17, 18, 19, 21, 22, 23. For #24, 25, 26 the labels are correct, they should be "CB".

Thank you,
 Claire

Subject: RE: Sample receipt confirmation analyses

Hi Claire,

For the samples we received yesterday, there were some sample ID anomalies. Can you please confirm if the sample label IDs (listed on pg. 8 of the attached) or the COC IDs are correct?

Thanks!

Danielle Gonsman

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 07/07/15. They were assigned to Work Order 15-07-0323.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CM-RW-10-G-S-20150707 | 15-07-0323-16-D | 07/07/15 13:40 | Sea Water | ICP/MS 05 | 07/14/15 | 07/14/15 22:07 | 150714L02F |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-----------|--------|--------|---------|------|------------|
| Cadmium | 0.0445 | 0.0300 | 0.00567 | 1.00 | |
| Chromium | 0.452 | 0.500 | 0.164 | 1.00 | J |
| Lead | 0.0310 | 0.0300 | 0.0135 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| CM-RW-10-G-S-20150707 | 15-07-0323-16-D | 07/07/15 13:40 | Sea Water | ICP/MS 05 | 07/14/15 | 07/20/15 23:42 | 150714L02F |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-----------|--------|--------|---------|------|------------|
| Copper | 8.65 | 0.0300 | 0.00898 | 1.00 | |
| Zinc | 20.7 | 0.500 | 0.0736 | 1.00 | |

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| OA-RW-08-G-S-20150707 | 15-07-0323-19-D | 07/07/15 14:20 | Sea Water | ICP/MS 05 | 07/14/15 | 07/14/15 22:15 | 150714L02F |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

| Parameter | Result | RL | MDL | DF | Qualifiers |
|-----------|--------|--------|---------|------|------------|
| Cadmium | 0.0186 | 0.0300 | 0.00567 | 1.00 | J |
| Chromium | 0.450 | 0.500 | 0.164 | 1.00 | J |
| Lead | 0.0184 | 0.0300 | 0.0135 | 1.00 | J |

Glossary of Terms and Qualifiers

Work Order: 15-07-0323

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|---|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDS or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| CI | See case narrative. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |
| | Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis. |
| | Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time. |
| | A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations. |

SAMPLE ANOMALY REPORT

DATE: 07 / 07 / 2015

SAMPLES, CONTAINERS, AND LABELS:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired (list client or ECI sample ID and analysis)
- Insufficient sample amount for requested analysis (list analysis)
- Improper container(s) used (list analysis)
- Improper preservative used (list analysis)
- No preservative noted on COC or label (list analysis and notify lab)
- Sample container(s) not labeled
- Client sample label(s) illegible (list container type and analysis)
- Client sample label(s) do not match COC (comment)
 - Project information
 - Client sample ID
 - Sampling date and/or time
 - Number of container(s)
 - Requested analysis
- Sample container(s) compromised (comment)
 - Broken
 - Water present in sample container
- Air sample container(s) compromised (comment)
 - Flat
 - Very low in volume
 - Leaking (not transferred; duplicate bag submitted)
 - Leaking (transferred into ECI Tedlar™ bags*)
 - Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 07/07/15. They were assigned to Work Order 15-07-0298.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-07-0298

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|---|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| CI | See case narrative. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |
| | Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis. |
| | Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time. |
| | A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations. |

SAMPLE ANOMALY REPORT

DATE: 07 / 7 / 2015

SAMPLES, CONTAINERS, AND LABELS:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired (list client or ECI sample ID and analysis)
- Insufficient sample amount for requested analysis (list analysis)
- Improper container(s) used (list analysis)
- Improper preservative used (list analysis)
- No preservative noted on COC or label (list analysis and notify lab)
- Sample container(s) not labeled
- Client sample label(s) illegible (list container type and analysis)
- Client sample label(s) do not match COC (comment)
 - Project information
 - Client sample ID
 - Sampling date and/or time
 - Number of container(s)
 - Requested analysis
- Sample container(s) compromised (comment)
 - Broken
 - Water present in sample container
- Air sample container(s) compromised (comment)
 - Flat
 - Very low in volume
 - Leaking (not transferred; duplicate bag submitted)
 - Leaking (transferred into ECI Tedlar™ bags*)
 - Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-07-0283

Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 07/07/15. They were assigned to Work Order 15-07-0283.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-07-0283

Page 1 of 1

| <u>Qualifiers</u> | <u>Definition</u> |
|-------------------|---|
| * | See applicable analysis comment. |
| < | Less than the indicated value. |
| > | Greater than the indicated value. |
| 1 | Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification. |
| 2 | Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification. |
| 3 | Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control. |
| 4 | The MS/MSD RPD was out of control due to suspected matrix interference. |
| 5 | The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference. |
| 6 | Surrogate recovery below the acceptance limit. |
| 7 | Surrogate recovery above the acceptance limit. |
| B | Analyte was present in the associated method blank. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| CI | See case narrative. |
| E | Concentration exceeds the calibration range. |
| ET | Sample was extracted past end of recommended max. holding time. |
| HD | The chromatographic pattern was inconsistent with the profile of the reference fuel standard. |
| HDH | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected). |
| HDL | The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected). |
| J | Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated. |
| JA | Analyte positively identified but quantitation is an estimate. |
| ME | LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean). |
| ND | Parameter not detected at the indicated reporting limit. |
| Q | Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater. |
| SG | The sample extract was subjected to Silica Gel treatment prior to analysis. |
| X | % Recovery and/or RPD out-of-range. |
| Z | Analyte presence was not confirmed by second column or GC/MS analysis. |
| | Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis. |
| | Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time. |
| | A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations. |

CASE NARRATIVE

Calscience Work Order No.: 14-09-2270
Project ID: GWMA-TMDL Compliance Monitoring

Provided below is a narrative of our analytical effort, including any unique features or anomalies encountered as part of the analysis of the seawater samples.

Sample Condition on Receipt

Fifteen seawater samples were received for this project on 29 September, 2014. The samples were transferred to the laboratory in an ice-chest with wet ice, following strict chain-of-custody (COC) procedures. The temperature of the samples upon receipt at the laboratory was 2.5-2.7°C. All samples were given laboratory identification numbers and logged into the Laboratory Information Management System (LIMS).

Tests Performed

Total Suspended Solids by SM 2540B (M)
Total and Dissolved Metals by EPA 1640/1631
Chlorinated Pesticides by EPA 8081A
PCB Congeners by EPA 8270C SIM

Data Summary

Samples were filtered in the laboratory for the dissolved metals analyses.

Holding times

All holding times were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Reporting Limits

All Method Detection Limits were met. The results were evaluated to the MDL, and where applicable, "J" flags were reported.

Blanks

Concentrations of target analytes in the method blank were found to be below reporting limits for all testing.

Laboratory Control Samples

A Laboratory Control Sample (LCS) analysis was performed at the required frequencies, and unless otherwise noted, all parameters were within the established control limits.

Matrix Spikes and QC Duplicates

Matrix spike analyses and/or QC Duplicates were performed for each applicable analysis when additional volume was available. All parameters were within the established control limits unless otherwise noted (non-project spike/duplicate samples, if any, are not discussed).

Surrogates

Surrogate recoveries for all applicable tests and samples were within the established control limits.

Acronyms

LCS - Laboratory Control Sample
MS/MSD- Matrix Spike/Matrix Spike Duplicate
PDS - Post Digestion Spike
RPD- Relative Percent Difference

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 09/29/14. They were assigned to Work Order 14-09-2270.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

27201 Puerta Real, Suite 350
Mission Viejo, CA 92691-8306

Date Received: 09/29/14
Work Order: 14-09-2270
Preparation: EPA 3510C
Method: EPA 8270C SIM PCB Congeners
Units: ug/L

Project: GWMA - TMDL Compliance Monitoring

Page 5 of 12

| Client Sample Number | Lab Sample Number | Date/Time Collected | Matrix | Instrument | Date Prepared | Date/Time Analyzed | QC Batch ID |
|-----------------------|-------------------|---------------------|-----------|------------|---------------|--------------------|-------------|
| IB-RW-13-G-S-20140928 | 14-09-2270-7-B | 09/28/14 13:07 | Sea Water | GC/MS HHH | 09/30/14 | 10/03/14 18:11 | 140930L13A |

Comment(s): - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.
