## **FINAL INITIAL STUDY/NEGATIVE DECLARATION**

Pursuant to the California Environmental Quality Act (Division 13, Public Resource Code)

### **PROPOSED PROJECT**

The Los Angeles Harbor Department (LAHD) has prepared this Initial Study/Negative Declaration (IS/ND) to address the environmental effects of the Underground Storage Tank Removal Project (hereafter “proposed Project”) at Cabrillo Marina, Berth 31 in the Port of Los Angeles (Port). LAHD is the Lead Agency under the California Environmental Quality Act (CEQA). The primary objective of the proposed Project is to remove three 10,000-gallon Underground Storage Tanks (USTs), electrical utilities, conveyances, fuel dispensers, and all other appurtenances as well as the surrounding contaminated soils as directed by the Los Angeles Fire Department (LAFD). If extensive soil and/or groundwater contamination is identified upon removal of the USTs, additional remediation may be required by the Los Angeles Regional Water Quality Control Board (LARWQCB). This potential phase of work may involve additional soil excavation and/or skimming or other treatment of groundwater. Based on available information (e.g., previous investigations and monitoring), it is estimated that a volume of approximately 700 tons or 518 cubic yards (i.e., between 35 and 40 truckloads) of contaminated soil could potentially be present within a 1,600-square-foot area adjacent to the tanks. There are no operational improvements or alterations as a result of the proposed Project.

### **DETERMINATION**

Based on the analysis provided in this Final IS/ND, LAHD finds that the proposed Project would not have a significant effect on the environment.

## **FINAL IS/ND ORGANIZATION**

This Final IS/ND has been prepared in accordance with the requirements of CEQA (California Public Resources Code [PRC] 21000 et seq.) and the CEQA Guidelines (California Code of Regulations [CCR] 15000 et seq.). The Final IS/ND includes the following discussion including responses to comments on the Draft IS/ND as well as clarifications and modifications provided in ~~strikeout~~ and underline format.

**Response to Comments:** This section describes the distribution of the Draft IS/ND for public review, comments received on the Draft IS/ND by LAHD and LAHD’s responses to these comments. Table RTC-1 lists the commenters. As shown in the table, four comment letters were received. Following the table is the comment letter and LAHD’s response.

**Clarifications and Modifications:** The Final IS/ND is provided in ~~strikeout~~ and underline format to identify changes made since the release of Draft IS/ND. Only minor revisions have been made. There were no modifications to the document that constitute a significant change or significant new information. Therefore, no recirculation is required.

The following sections were included in the Draft IS/ND and are included in this final document:

**Section 1. Introduction.** This section provides an overview of the proposed Project and the CEQA environmental documentation process.

**Section 2. Project Description.** This section provides a detailed description of the proposed Project objectives and components.

**Section 3. Initial Study Checklist.** This section presents the CEQA IS checklist for all impact areas and mandatory findings of significance.

**Section 4. Potential Impacts and Mitigation Measures.** This section presents the environmental analysis for each issue area identified on the environmental checklist. If the proposed Project does not have the potential to significantly impact a given resource area, the relevant section provides a brief discussion of the reasons why no impacts are expected. If the proposed Project could have a potentially significant impact on a resource, the issue area discussion provides a description of potential impacts and appropriate mitigation measures and/or permit requirements that would reduce those impacts to a less than significant level. This document is an IS/ND because there are no impacts associated with the proposed Project that must be mitigated below significance thresholds.

**Section 5. Proposed Finding.** This section presents the proposed finding regarding environmental impacts.

**Section 6. References.** This section provides a list of reference materials used during the presentation of the IS/ND.

**Section 7. Preparers and Contributors.** This section provides a list of key personnel involved in the preparation of the IS/ND.

**Section 8. Acronyms and Abbreviations.** The section provides a list of acronyms and abbreviations used throughout the IS/ND.

## **RESPONSE TO COMMENTS**

### **DISTRIBUTION OF THE DRAFT IS/ND**

In accordance with the CEQA statutes and Guidelines, the Draft IS/ND was circulated for a period of 30 days for public review and comment. The public review period for the Draft IS/ND began on May 1, 2017, and closed on May 31, 2017.

The Draft IS/ND was specifically distributed to interested and/or involved public agencies, organizations, neighbors, and private individuals for review. The Draft IS/ND was also made available for public review at the following locations:

- LAHD Environmental Management Division at 222 W 6<sup>th</sup> Street, Suite 900, San Pedro, CA;
- Los Angeles City Library, San Pedro Branch at 931 South Gaffey Street, San Pedro, CA; and
- Los Angeles City Library, Wilmington Branch at 1300 North Avalon, Wilmington CA.

In addition, the Draft IS/ND was filed with the Los Angeles County Clerk, City of Los Angeles Clerk, the State Clearinghouse and made available online at <http://www.portoflosangeles.org>.

### **COMMENTS ON THE DRAFT IS/ND**

During the 30-day public review period, Responsible Agencies and the public had an opportunity to provide written comments on the information contained within the Draft IS/ND. These comments and responses are included in the record and shall be considered by LAHD during deliberation as to whether or not necessary approvals should be granted for the proposed Project. As stated in Section 21064.5 of the CEQA Guidelines, a project would only be approved when LAHD “finds that there is no substantial evidence that the Project will have a significant effect on the environment and that the IS/ND reflects the Lead Agency’s independent judgment and analysis.” The LAHD received four written comment letters during the review period as presented in Table RTC-1.

**Table RTC-1. Comment Letters Received on the Draft IS/ND**

<b>Letter Number</b>	<b>Date</b>	<b>Organization/Entity</b>
1	May 5, 2017	Ms. Gayle Totton, Native American Heritage Commission
2	May 19, 2017	Mr. Johnson P. Abraham, Department of Toxic Substances Control
3	May 24, 2017	Ms. Dianna Watson, California Department of Transportation
4	May 30, 2017	Ms. Lijin Sun, South Coast Air Quality Management District

LAHD has evaluated these comments and prepared a written response and incorporated minor revisions to the Final IS/ND, as necessary.

Re: SCH# 2017051002, Removal of Underground Storage Tanks at Cabrillo Marina, Berth 31, Port of Los Angeles Project, City of San Pedro; Los Angeles County, California

Dear Ms. Enciso:

The Native American Heritage Commission (NAHC) has reviewed the Negative Declaration prepared for the project referenced above. The review included the Introduction and Project Description, the Initial Study Environmental Checklist, and the Impacts and Mitigation Measures section prepared by Amec Foster Wheeler for the City of Los Angeles Harbor Department. We have the following concerns:

- There is no documentation of **government-to-government consultation by the lead agency** under AB-52 with Native American tribes traditionally and culturally affiliated to the project area as required by statute, or that mitigation measures were developed in consultation with the tribes. Discussions under AB-52 may include the type of document prepared and proposed mitigation. Contact by consultants during the Cultural Resources Assessments is not formal consultation.

The California Environmental Quality Act (CEQA)<sup>1</sup>, specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.<sup>2</sup> If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared.<sup>3</sup> In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended in 2014 by Assembly Bill 52. (AB 52).<sup>4</sup> **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** AB 52 created a separate category for "tribal cultural resources"<sup>5</sup>, that now includes "a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment."<sup>6</sup> Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.<sup>7</sup> Your project may also be subject to **Senate Bill 18 (SB 18)** (Burton, Chapter 905, Statutes of 2004), Government Code 65352.3, if it also involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space. **Both SB 18 and AB 52 have tribal consultation requirements.** Additionally, if your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966<sup>8</sup> may also apply.

**Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

Agencies should be aware that AB 52 does not preclude agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52. For that reason, we urge you to continue to request Native American Tribal Consultation Lists and Sacred Lands File searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>. Additional information regarding AB 52 can be found online

<sup>1</sup> Pub. Resources Code § 21000 et seq.

The NAHC recommends lead agencies consult with all California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources.

A brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments is also attached.

Please contact me at [gayle.totton@nahc.ca.gov](mailto:gayle.totton@nahc.ca.gov) or call (916) 373-3710 if you have any questions.

Sincerely,

Gayle Totton, B.S., M.A., Ph.D  
Associate Governmental Project Analyst

## **Pertinent Statutory Information:**

### **Under AB 52:**

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice.

A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project.<sup>9</sup> and **prior to the release of a negative declaration, mitigated negative declaration or environmental impact report.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18).<sup>10</sup>

The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- a. Alternatives to the project.
- b. Recommended mitigation measures.
- c. Significant effects.<sup>11</sup>

1. The following topics are discretionary topics of consultation:

- a. Type of environmental review necessary.
- b. Significance of the tribal cultural resources.
- c. Significance of the project's impacts on tribal cultural resources.

If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency.<sup>12</sup>

With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process **shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10.** Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.<sup>13</sup>

If a project may have a significant impact on a tribal cultural resource, **the lead agency's environmental document shall discuss both of the following:**

- a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
- b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource.<sup>14</sup>

Consultation with a tribe shall be considered concluded when either of the following occurs:

- a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
- b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.<sup>15</sup>

Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 **shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program,** if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable.<sup>16</sup>

If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, **the lead agency shall consider feasible mitigation** pursuant to Public Resources Code section 21084.3 (b).<sup>17</sup>

An environmental impact report **may not be certified,** nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

- a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
- b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

<sup>9</sup> Pub. Resources Code § 21080.3.1, subs. (d) and (e)

<sup>10</sup> Pub. Resources Code § 21080.3.1 (b)

<sup>11</sup> Pub. Resources Code § 21080.3.2 (a)

<sup>12</sup> Pub. Resources Code § 21080.3.2 (a)

<sup>13</sup> Pub. Resources Code § 21082.3 (c)(1)

<sup>14</sup> Pub. Resources Code § 21082.3 (b)

<sup>15</sup> Pub. Resources Code § 21080.3.2 (b)

<sup>16</sup> Pub. Resources Code § 21082.3 (a)

<sup>17</sup> Pub. Resources Code § 21082.3 (e)

- c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days.<sup>18</sup>  
***This process should be documented in the Tribal Cultural Resources section of your environmental document.***

**Under SB 18:**

Government Code § 65352.3 (a) (1) requires consultation with Native Americans on general plan proposals for the purposes of "preserving or mitigating impacts to places, features, and objects described § 5097.9 and § 5091.993 of the Public Resources Code that are located within the city or county's jurisdiction. Government Code § 65560 (a), (b), and (c) provides for consultation with Native American tribes on the open-space element of a county or city general plan for the purposes of protecting places, features, and objects described in Sections 5097.9 and 5097.993 of the Public Resources Code.

- SB 18 applies to **local governments** and requires them to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: [https://www.opr.ca.gov/docs/09\\_14\\_05\\_Updated\\_Guidelines\\_922.pdf](https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf)
- **Tribal Consultation:** If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.**<sup>19</sup>
- **There is no Statutory Time Limit on Tribal Consultation under the law.**
- **Confidentiality:** Consistent with the guidelines developed and adopted by the Office of Planning and Research,<sup>20</sup> the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction.<sup>21</sup>
- **Conclusion Tribal Consultation:** Consultation should be concluded at the point in which:
  - The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
  - Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation.<sup>22</sup>

**NAHC Recommendations for Cultural Resources Assessments:**

- Contact the NAHC for:
  - A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
  - A Native American Tribal Contact List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
    - The request form can be found at <http://nahc.ca.gov/resources/forms/>.
- Contact the appropriate regional California Historical Research Information System (CHRIS) Center ([http://ohp.parks.ca.gov/?page\\_id=1068](http://ohp.parks.ca.gov/?page_id=1068)) for an archaeological records search. The records search will determine:
  - If part or the entire APE has been previously surveyed for cultural resources.
  - If any known cultural resources have been already been recorded on or adjacent to the APE.
  - If the probability is low, moderate, or high that cultural resources are located in the APE.
  - If a survey is required to determine whether previously unrecorded cultural resources are present.
- If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
  - The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
  - The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

<sup>18</sup> Pub. Resources Code § 21082.3 (d)

<sup>19</sup> (Gov. Code § 65352.3 (a)(2)).

<sup>20</sup> pursuant to Gov. Code section 65040.2,

<sup>21</sup> (Gov. Code § 65352.3 (b)).

<sup>22</sup> (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

**Examples of Mitigation Measures That May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**

- Avoidance and preservation of the resources in place, including, but not limited to:
  - Planning and construction to avoid the resources and protect the cultural and natural context.
  - Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
  - Protecting the cultural character and integrity of the resource.
  - Protecting the traditional use of the resource.
  - Protecting the confidentiality of the resource.
- Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed.<sup>23</sup>
- Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated.<sup>24</sup>

The lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

- Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources.<sup>25</sup> In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

<sup>23</sup> (Civ. Code § 815.3 (c)).

<sup>24</sup> (Pub. Resources Code § 5097.991).

<sup>25</sup> per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)).

INITIAL STUDY AND PROPOSED MITIGATED NEGATIVE DECLARATION (ND) FOR  
REMOVAL OF UNDERGROUND STORAGE TANKS, CABRILLO MARINA, BERTH 31,  
PORT OF LOS ANGELES, APP No. 161121-169 PROJECT (SCH# 2017051002)

Dear Mr. Cannon:

The Department of Toxic Substances Control (DTSC) has reviewed the subject ND. The following project description is stated in the ND: "The City of Los Angeles Harbor Department (LAHD) has prepared this Initial Study/Negative Declaration (IS/ND) to address potential environmental effects associated with the removal of three 10,000-gallon underground storage tanks (USTs) and all associated electrical utilities, pumps, conveyances, and fuel dispensers at Cabrillo Marina, Berth 31 (proposed Project)."

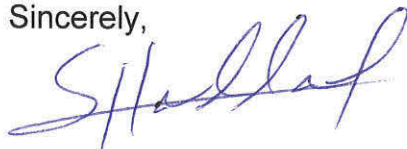

Based on the review of the submitted document, DTSC has the following comments:

- 2-1 1. If the project plans include discharging wastewater to a storm drain, you may be required to obtain an NPDES permit from the overseeing Regional Water Quality Control Board (RWQCB).
- 2-2 2. The ND states, "Specifically, the proposed Project would include installation of shoring (i.e., temporary support structures to facilitate excavation); . . . and soil excavation to facilitate removal of the three USTs and all associated electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances." DTSC recommends evaluation, proper investigation and mitigation, if necessary, on onsite areas with current or historic PCB-containing transformers.

- 2-3 3. DTSC recommends soil gas sampling and vapor intrusion risk evaluation on sites with releases of volatile organic compounds (VOCs). DTSC recommends soil gas sampling after removal action to confirm no residual VOC contamination remain onsite and/or risk is acceptable based on applicable and relevant state guidelines
- 2-4 4. The ND states, "Based on available information (e.g., previous investigations and monitoring reports), it is estimated that a volume of approximately 700 tons or 518 cubic yards of contaminated soil (i.e., between 35 and 40 truckloads) could potentially be present within a 1,600-square-foot area adjacent to the tanks." The ND further states, "Following the completion of contaminated soil excavation and any other additional remediation activities, the area would be backfilled and repaved with asphalt consistent with the existing parking lot material and grade." Excavated soil should be sampled prior to export/disposal. If the soil is contaminated, it should be disposed of properly in accordance with all applicable and relevant laws and regulations. If the project proposes to import soil to backfill the excavated areas, proper evaluation and/or sampling should be conducted to make sure that the imported soil is free of contamination.
- 2-5 5. If during construction/demolition of the project, soil and/or groundwater contamination is suspected, construction/demolition in the area should cease and appropriate health and safety procedures should be implemented. If it is determined that contaminated soil and/or groundwater exist, the ND should identify how any required investigation and/or remediation will be conducted, and the appropriate government agency to provide regulatory oversight.

If you have any questions regarding this letter, please contact me at (714) 484-5380 or email at [Johnson.Abraham@dtsc.ca.gov](mailto:Johnson.Abraham@dtsc.ca.gov).

Sincerely,

for Johnson P. Abraham

## **Negative Declaration (ND) for the Removal of Underground Storage Tanks at Cabrillo Marina, Berth 31, Port of Los Angeles**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comment is meant as guidance for the Lead Agency and should be incorporated into the Final ND.

### Project Description

The proposed project consists of the removal of three 10,000 gallon underground storage tanks. The proposed project would also include soil remediation activities after the excavation and removal of the tanks.

### Compliance with SCAQMD Rules 1149

4-1 The Lead Agency should include a discussion to demonstrate compliance with the requirements of SCAQMD Rule 1149 – Storage Tank and Pipeline Cleaning and Degassing in the Final ND.

Pursuant to the CEQA Guidelines Section 15074, prior to approving the proposed project, the Lead Agency shall consider the ND for adoption together with any comments received during the public review process. Please provide the SCAQMD staff with written responses to all comments contained herein prior to the adoption of the Final ND. SCAQMD staff is available to work with the Lead Agency to address these concerns and any other air quality questions that may arise. Please contact Jack Cheng, Air Quality Specialist, CEQA IGR, at (909) 396-2448, if you have any questions regarding these comments.

Sincerely,

*Lijin Sun*

Control Number

## **RESPONSES TO COMMENTS**

### *Comment Letter #1 – Ms. Gayle Totton, Native American Heritage Commission*

- 1-1 Pursuant to Assembly Bill 52 (AB 52), a lead agency is required to consult with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project if the tribe requested to the lead agency, in writing, to be informed by the lead agency of proposed projects in that geographic area. To date, the LAHD has not received any such requests.

### *Comment Letter #2 – Mr. Johnson P. Abraham, Department of Toxic Substances Control*

- 2-1 Wastewater discharge is not anticipated as a result of Phase I and Phase II construction activities; however, if necessary, the Applicant would obtain an NPDES permit from the LARWQCB. Please see minor revisions to Section 4.9, *Hydrology and Water Quality*.
- 2-2 The USTs and all associated electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances were installed in 1985 after the manufacture of polychlorinated biphenyls (PCBs) was stopped in 1977. As such, it is not anticipated that PCB-containing transformers would be encountered during Phase I and/or Phase II construction activities. Additionally, previous Phase I investigations have not revealed the presence of or potential for PCB contamination at the Project site. However, if identified, PCBs would be removed and disposed of in accordance with all appropriate federal and state regulations.
- 2-3 As described in Section 2.3, *Proposed Project Construction Activities*, volatile organic compounds (VOCs) would be monitored during excavation activities in accordance with SCAQMD Rule 1166. Soil gas sampling will be conducted in the event that VOC monitoring and/or soil testing is needed. Additional soil testing would occur following the excavation and removal of the USTs under Phase I and additional soil remediation would occur under Phase II activities, as necessary. Additionally, clean material (confirmed with proper evaluation and sampling) would be used to backfill the excavated areas.
- 2-4 The proposed Project would follow LAHD's internal guidelines document titled *2016 Environmental Guidance for Industrial Fill Material*, which assists with the determination of suitability of import/fill materials for industrial land uses. As described in Section 2.3, *Proposed Project Construction Activities*, Section 4.6, *Geology and Soils*, and Section 4.8, *Hazards and Hazardous Materials*, contaminated soils would be sampled and disposed of at appropriate, permitted facilities in accordance with all applicable federal and state regulations. Additionally, clean material (confirmed with proper evaluation and sampling) would be used to backfill the excavated areas.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

2-5 As described in the Draft IS/ND, the objective of the proposed project is to remove the three 10,000-gallon USTs and any associated contaminated soils and groundwater. As described in Section 4.8, *Hazards and Hazardous Materials*, if contaminated materials are encountered during construction activities, standard regulatory practices would be applied and construction workers would adhere to the approved Health and Safety Plan. Construction workers would be equipped with OSHA-required Personal Protective Equipment (PPE) and would temporarily cease work in the event that hazardous materials are suspected or discovered.

As described in the Section 2.3, *Proposed Project Construction Activities*, LAFD would perform inspections and monitor the removal of the USTs. If additional soil contamination and/or groundwater contamination is observed during sampling, LAHD would notify LARWQCB, which would oversee the completion of additional remediation activities under Phase II, as necessary.

### *Comment Letter #3 – Ms. Dianna Watson, California Department of Transportation*

3-1 Comment noted. LAHD understands that the California Department of Transportation (Caltrans) does not anticipate any adverse impacts on the State Highway System as a result of the Project.

3-2 Specific reference to Caltrans transportation permits has been added to Section 4.16, *Transportation and Traffic* of the Final IS/ND. Additionally, minor revisions to Section 4.16, *Transportation and Traffic* have been included in the Final IS/ND to describe that heavy haul trucks would be limited to off-peak commute periods to the extent feasible.

3-3 Best management practices (BMPs) described in Section 2.3, *Proposed Project Construction Activities* would be implemented during construction to ensure clean storm water run-off (e.g., 12-inch high berm at the top of all graded slopes, temporary erosion control measures, etc.). Following the completion of the construction activities the Project site would be returned to a paved asphalt parking lot consistent with the existing parking lot material and grade.

### *Comment Letter #4 – Ms. Lijin Sun, South Coast Air Quality Management District*

4-1 Specific reference to South Coast Air Quality Management District (SCAQMD) Rule 1149 has been added to Section 2.3, *Proposed Project Construction Activities* as well as Section 4.3, *Air Quality* of the Final IS/ND. As described in the Final IS/ND the Project would comply with SCAQMD Rule 1149 including the completion of Initial Notification and Followup Communication consistent with Rule 1149(c)(7). Emission calculations included in the Draft IS/ND account for a portable thermal oxidizer necessary for degassing activities.

## **1. INTRODUCTION**

The City of Los Angeles Harbor Department (LAHD) has prepared this Initial Study/Negative Declaration (IS/ND) to address potential environmental effects associated with the removal of three 10,000-gallon underground storage tanks (USTs) and all associated electrical utilities, pumps, conveyances, and fuel dispensers at Cabrillo Marina, Berth 31 (proposed Project). This IS/ND also addresses potential environmental effects associated with possible additional soil remediation activities, as necessary, following the excavation and removal of the tanks. Cathay Bank (Applicant) is the owner of all property at the Project site, including the USTs and all associated equipment. The USTs, which include two diesel tanks and one gasoline tank, were originally installed in 1985 and are located beneath an existing parking lot adjacent to an LAHD-owned mixed-use facility comprised of office and retail space as well as a banquet and meeting facility. In August 1992, petroleum hydrocarbon odors were detected coming from the sewer system beneath the Project site. Odors were also detected inside the former Madeo Restaurant (now a banquet and meeting room for the Doubletree Hotel), which is located adjacent to the USTs and connected to the same sewer system. Water samples collected by LAHD indicated the presence of gasoline within the adjacent Cabrillo Marina. A Phase II Environmental Site Assessment conducted in October 1992 identified soil and groundwater contamination in the area surrounding the tanks (Pacific Edge Engineering, Inc. 2012). The source of the contamination was found to be the piping connection to the 10,000-gallon gasoline UST, which had shifted over time causing a leak. The leak was reported by LAHD to the Los Angeles Regional Water Quality Control Board (LARWQCB) in August 1992, and groundwater remediation/monitoring resulting from the leak is on-going under LARWQCB Case No. 907310061A.

The proposed Project would be executed in either one or two phases (depending upon the presence of contamination beneath the UST and/or associated equipment).

**Phase I – UST Removal under Permit from the City of Los Angeles Fire Department (LAFD).** This phase of work would consist of the physical removal of the three USTs and all associated electrical utilities, pumps, conveyances lines, fuel dispensers, and other appurtenances<sup>1</sup> associated with the USTs. During the removal phase, the LAFD requires the collection of soil samples beneath each UST (and associated pipelines) and from the sidewalls of the excavation. The LAFD Inspector may also direct the excavation of a limited amount of chemically impacted soil, if present.

To enable the excavation, a 35-foot by 35-foot area of the existing parking lot (i.e., concrete and asphalt pavements) overlying the tanks would be demolished and removed. Following the

---

<sup>1</sup> UST appurtenances include electrical utilities, pumps, conveyance lines, fuel dispensers, etc. Specifically, appurtenances do not include remediation equipment, monitoring wells, or other piping associated with LARWQCB case No. 907310061A. Only LARWQCB can direct/approve Cathay Bank as to removal of monitoring and remediation equipment.

## **Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

removal of the tanks and sampling of the soils as directed, the excavation would be backfilled with clean fill and repaved with asphalt consistent with the existing parking lot material and grade.

**Phase II – Potential Additional Soil and/or Groundwater Remediation.** If extensive soil and/or groundwater contamination is identified upon initial excavation and removal of the USTs, additional remediation may be required by the LARWQCB. This phase of the proposed Project, if necessary, may involve additional excavation of chemically impacted soils and/or treatment of groundwater. Based on the information currently available (e.g., previous investigations and monitoring reports), it is estimated that a volume of approximately 700 tons or 518 cubic yards of contaminated soil (i.e., 35-40 truckloads), from an estimated 1,600 square foot area, could potentially be present. Additional asphalt and/or concrete above this area would need to be removed prior to the excavation of the contaminated soil. Following the completion of all additional remediation activities, the excavation would be backfilled and repaved with asphalt consistent with the existing parking lot material and grade.

### **1.1 CEQA PROCESS**

This document has been prepared in accordance with California Environmental Quality Act (CEQA), Public Resources Code Section 21000 *et seq.* and the State CEQA Guidelines, California Code of Regulations (CCR) Section 15000 *et seq.* Under CEQA, the lead agency is the public agency with primary responsibility over approval of a proposed Project. Pursuant to Section 15367, the CEQA lead agency for the proposed Project is the LAHD. The LAHD will consider the information in this document when determining whether to approve and issue appropriate permits for the proposed Project.

One of the main objectives of CEQA is to disclose to the public and decision-makers potential environmental effects of proposed activities. CEQA requires that the potential environmental effects of a project be evaluated prior to implementation. Preparation of an IS is guided by Section 15063 of the CEQA Guidelines, whereas Sections 15070–15075 outline the process for preparing a Negative Declaration or a Mitigated Negative Declaration. Where appropriate and supportive to an understanding of the issues, reference will be made to the statute, the CEQA Guidelines, or appropriate case law. This IS/ND includes a discussion of the proposed Project's potential impact on the existing environment and identifies standard construction-related best management practices (BMPs) and LAHD's Environmental Guidance for Industrial Fill Material (February 2016). The LAHD has determined that an IS/ND is the appropriate level of CEQA-compliant documentation for the proposed Project because potential environmental impacts resulting from proposed Project implementation would be below significance thresholds, resulting in no requirement for mitigation.

In accordance with the CEQA statutes and Guidelines, this IS/ND will be circulated for a period of 30 days for public review and comment. The public review period is scheduled to begin on May 1, 2017, and end on May 31, 2017. This Draft IS/ND will be distributed to Responsible

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

public agencies, other interested or involved agencies, organizations, and private individuals for review and will be made available for general public review online at the Port of Los Angeles website at <http://www.portoflosangeles.org> and in hardcopy at the LAHD Environmental Management Division at 222 W 6<sup>th</sup> Street, Suite 900, San Pedro; the Los Angeles City Library San Pedro Branch at 931 Gaffey Street, San Pedro; and at the Los Angeles City Library Wilmington Branch at 1300 North Avalon, Wilmington.

In reviewing the IS/ND, affected public agencies and interested members of the public should focus on the sufficiency of the document in identifying and analyzing potential project impacts on the environment. Comments on the IS/ND should be submitted in writing either through mail or email prior to the end of the 30-day public review period on May 31, 2017. All correspondence, through mail or email, should include the project title “Underground Storage Tank Removal at Cabrillo Marina, Berth 31” in the subject line. For additional information, please contact the LAHD Environmental Management Division at (310) 732-3675.

Written comments submitted by mail must be postmarked on or before May 31, 2017 and addressed to:

Christopher Cannon, Director  
City of Los Angeles Harbor Department  
Environmental Management Division  
425 S. Palos Verdes St.  
San Pedro, California 90731

Written comments sent via email on or before May 31, 2017 should be addressed to [ceqacomment@portla.org](mailto:ceqacomment@portla.org).

Responses to all public comments on the Draft IS/ND will be included in the Final IS/ND and considered by the LAHD prior to making a decision as to whether necessary approvals should be granted for the proposed Project. The project IS/ND will only be approved when the LAHD “finds that there is no substantial evidence that the project will have a significant effect on the environment and that the IS/ND reflects the lead agency’s independent judgment and analysis.”

## 1.2 DOCUMENT FORMAT

This IS/ND contains eight sections.

**Section 1. Introduction.** This section provides an overview of the proposed Project and the CEQA environmental documentation process.

**Section 2. Project Description.** This section provides a detailed description of the proposed Project objectives and components.

**Section 3. Initial Study Checklist.** This section presents the CEQA checklist for all impact areas and mandatory findings of significance.

**Section 4. Potential Impacts and Mitigation Measures.** This section presents the environmental analysis for each issue area identified on the environmental checklist form. If the proposed Project does not have the potential to significantly impact a given issue area, the relevant section provides a brief discussion of the reasons why no impacts are expected.

**Section 5. Proposed Finding.** This section presents the proposed finding regarding environmental impacts.

**Section 6. References.** This section provides a list of reference materials used during the preparation of the IS/ND.

**Section 7. Preparers and Contributors.** This section provides a list of key personnel involved in the preparation of the IS/ND.

**Section 8. Acronyms and Abbreviations.** This section provides a list of acronyms and abbreviations used throughout the IS/ND.

The environmental analyses included in Section 4 are consistent with the CEQA IS/ND format presented in Section 3. Impacts are separated into the following categories:

***Potentially Significant Impact.*** This category is only applicable if there is substantial evidence that an effect may be significant, and no feasible mitigation measures can be identified to reduce impacts to a less than significant level. Upon completion of the IS, no impacts were identified that fall into this category.

***Less than Significant After Mitigation Incorporated.*** This category applies where the incorporation of mitigation measures would reduce an effect from a “Potentially Significant Impact” to a “Less than Significant Impact.” The lead agency must describe the mitigation measure(s), and briefly explain how they would reduce the effect to a less than significant level (mitigation measures from earlier analyses may be cross-referenced). Upon completion of the IS, no impacts were identified that fall into this category.

***Less than Significant Impact.*** This category is identified when the proposed Project would result in impacts below the threshold of significance, and no mitigation measures are required.

***No Impact.*** This category applies when a proposed project would not create an impact in the specific environmental issue area. “No Impact” answers do not require a detailed explanation if they are adequately supported by the information sources cited by the lead agency.

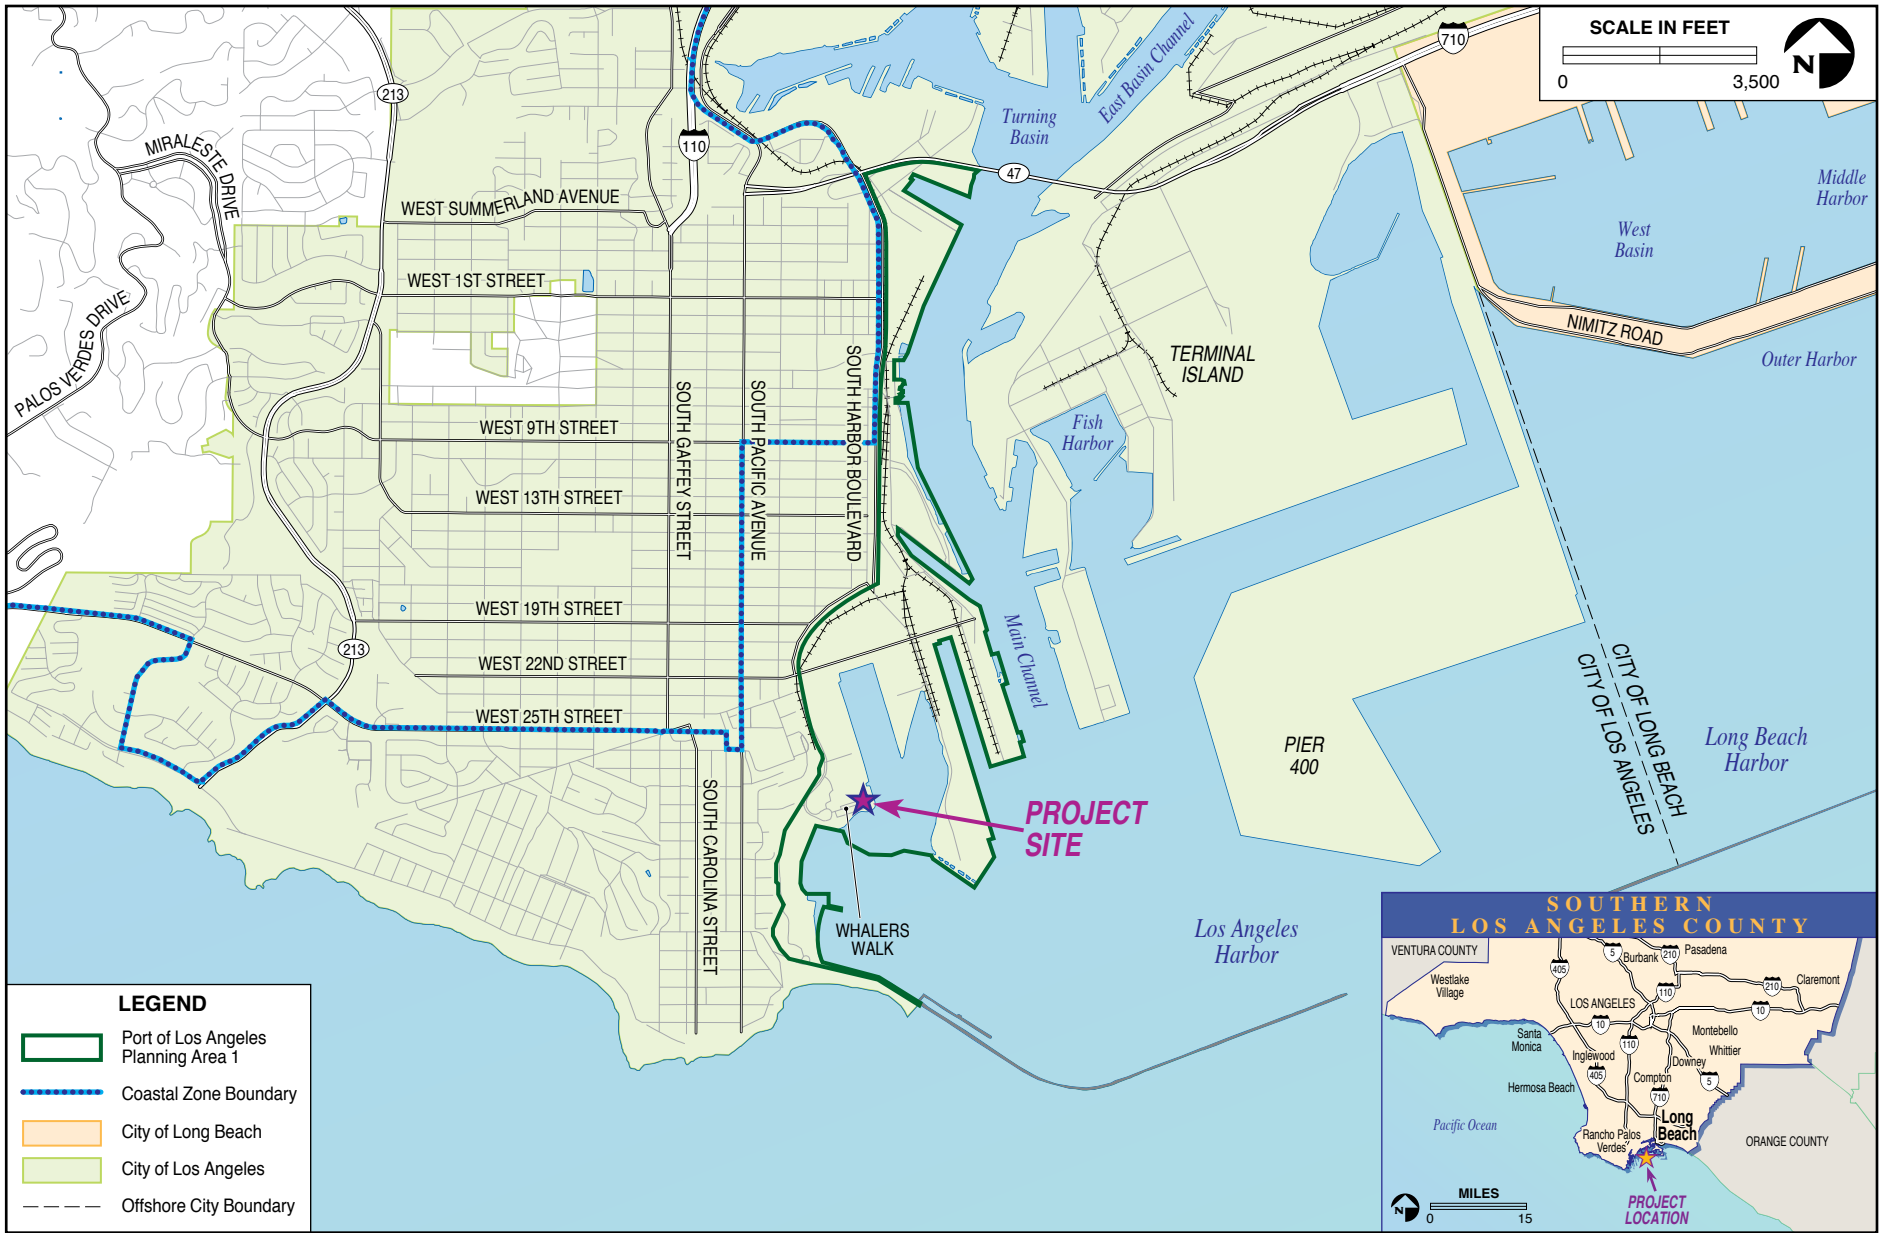

## **2. PROJECT DESCRIPTION**

This IS/ND has been prepared to evaluate the potential environmental impacts associated with the proposed excavation and removal of three 10,000-gallon USTs and associated equipment at 210 Whalers Walk, Cabrillo Marina, Berth 31 (proposed Project). Under the proposed Project, Cathay Bank (Applicant) would excavate and remove the three USTs (including a 10,000-gallon gasoline tank that was determined to have leaked at its piping connection and was subsequently repaired). Specifically, the proposed Project would include installation of shoring (i.e., temporary support structures to facilitate excavation); demolition and removal of the existing overlying concrete slab and surrounding asphalt pavements; and soil excavation to facilitate removal of the three USTs and all associated electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances. Following removal of the three USTs and all visibly stained soils to the satisfaction of the LAFD Inspector, the base and the sidewalls of the excavation would be sampled as directed by the Inspector. Once sampling is completed, the excavation would be backfilled and repaved with asphalt consistent with the material and grade of the existing parking lot at the Project site. However, if extensive soil and/or groundwater contamination is identified during sampling, additional remediation of the soil and/or groundwater may be required by the LARWQCB. This potential phase of work may involve additional excavation of chemically impacted soils and/or treatment of groundwater. Based on available information (e.g., previous investigations and monitoring reports), it is estimated that a volume of approximately 700 tons or 518 cubic yards of contaminated soil (i.e., between 35 and 40 truckloads) could potentially be present within a 1,600-square-foot area adjacent to the tanks. Additional asphalt and/or concrete above this area would need to be removed prior to the excavation of the contaminated soil. Following the completion of contaminated soil excavation and any other additional remediation activities, the area would be backfilled and repaved with asphalt consistent with the existing parking lot material and grade. If any free-floating hydrocarbon is observed, LAHD would notify LARWQCB and the free-floating hydrocarbon would be skimmed and removed as deemed necessary.

### **2.1 PROJECT LOCATION**

#### Regional Location

The Port of Los Angeles (Port) is located at the southernmost portion of the City of Los Angeles and encompasses approximately 7,500 acres of land and water along 43 miles of waterfront, with approximately 270 commercial berths and 24 passenger and cargo terminals. It is located approximately 23 miles south of Downtown Los Angeles and is surrounded by the community of San Pedro to the west, the community of Wilmington to the north, the Port of Long Beach to the east, and the Pacific Ocean to the south (see Figure 1).

**Regional Location**

**FIGURE 1**

## Final Initial Study and Negative Declaration

### Underground Storage Tank Removal at Cabrillo Marina, Berth 31

Port operations are predominately centered on shipping activities, cruise ships, commercial fishing; and various other maritime-based activities. Retail shops and restaurants, primarily located along the west side of the Main Channel, are also part of the Port complex. Community recreation areas include a public swimming beach, Cabrillo Beach Youth Waterfront Sports Center, the Cabrillo Marine Aquarium, the Los Angeles Maritime Museum, 22<sup>nd</sup> Street Park, and the Wilmington Waterfront Park.

**Figure 2. The Cabrillo Marina**

Source: California Coastal Records Project, Kenneth & Gabrielle Adelman 2015 ©.

## Project Setting

Cathay Bank's approximately 16,465-square-foot former premises are located within the Cabrillo Marina, one of 15 marinas at the Port. The Cabrillo Marina contains the Double Tree Hotel and associated restaurant and retail facilities, Cabrillo Plaza, the Los Angeles Yacht Club, harbor and yacht facilities, and a large surface parking lot (refer to Figure 2). The Project site is located immediately adjacent to the west of an LAHD-owned mixed-use facility, comprised of office and retail space as well as a banquet and meeting space, on the eastern end of the marina.

**Figure 3. Project Site at 210 Whalers Walk**

The Project site is surrounded by the Cabrillo Yacht Marina to the east and surface parking to the west, north, and south (see Figure 3 and Figure 5).

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

Landside access to Cabrillo Marina is provided by a network of freeways and arterial routes. The freeway network consists of the Harbor Freeway (Interstate [I]-110), the Long Beach Freeway (I-170), the San Diego Freeway (I-405), and the Seaside Freeway (State Route [SR]-47). The Project site is located off the Harbor Freeway at the North Harbor Boulevard exit, from Via Cabrillo Marina at Whalers Walk.

### Land Use and Zoning

The Project site is located within Planning Area 1 of the Port of Los Angeles Master Plan (LAHD 2014). Planning Area 1 encompasses the San Pedro Waterfront, from the breakwater to the Vincent Thomas Bridge along the western boundary of the Port. Planning Area 1 extends from Berths 19 to 95 and primarily includes land uses focused on public access to the waterfront for institutional and recreational uses, cruise ship operations, cargo, and fishing activities. Planning Area 1 emphasizes waterfront access through a waterfront promenade, parks, museums, academic uses, and visitor-serving commercial uses and attractions.

**Figure 4. USTs within the Project Area**

The Project site is identified as Assessor's Parcel Number (APN) 7440039911 and is designated as recreation and commercial land uses under the City of Los Angeles General Plan and is zoned quasi-public light industrial ([Q]M2-1) under the City of Los Angeles Zoning Ordinance.

## **2.2 PROJECT BACKGROUND AND OBJECTIVES**

### Project Background

Cathay Bank (Applicant) is the owner of all developments at the Project site, including the three 10,000-gallon USTs and all associated electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances installed in 1985. In August 1992, petroleum hydrocarbon odors were discovered in the sewer system beneath the Project site. Odors were also detected inside the former Madeo Restaurant adjacent to the USTs and connected to the same sewer system, which prompted LAHD investigation. Water samples collected by LAHD indicated the presence of gasoline within the adjacent Cabrillo Marina in the Berth 31 area and a Phase II Environmental Site Assessment, conducted in October 1992 identified soil and groundwater contamination in the area surrounding the tanks (Pacific Edge Engineering, Inc. 2012). The source of the contamination was found to be the piping connection to the 10,000-gallon gasoline UST which had shifted over time causing a leak. No leaks were identified from the two 10,000-

## **Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

gallon diesel tanks at the time of assessment. The leak was reported by LAHD to the LARWQCB in August 1992 and repaired. Groundwater remediation/monitoring resulting from the leak is on-going under LARWQCB Case No. 907310061A.

Cathay Bank, the responsible party under the jurisdiction of LARWQCB Case Number 907310061A, prepared and submitted a Remedial Action Plan (RAP) on June 6, 2006. The RAP was approved by LARWQCB on November 30, 2009. As indicated in the RAP and other site reports, contaminant levels of concern were primarily in groundwater and included gasoline components methyl tert-butyl ether (MTBE) and tert-butyl alcohol (TBA). Other contaminants including total petroleum hydrocarbons (i.e., gasoline), benzene, toluene, ethylbenzene and xylenes (BTEX) were also identified within the groundwater but were of lesser concern, as BTEX is less soluble in groundwater and can be more easily oxidized.

The approved RAP recommended installation of a vapor extraction system with groundwater circulation wells to remediate soil and groundwater beneath the site. A dual phase extraction remediation system was implemented with treated groundwater discharges under a National Pollutant Discharge Elimination System (NPDES) permit with remediation activities beginning in July 2011. However, the system was shut down in mid-2014 as the LARWQCB changed the copper discharge limit to a range that was below what the system was capable of meeting. The system has not been in operation since 2014.

Concession Agreement No. 518 (CA518) between the LAHD and Cathay Bank expired on December 31, 2015. Prior to the expiration of the agreement, in October 2015, LAHD began working with Cathay Bank to develop an agreement for clean-up of any residual contamination, including removal of the USTs, and ultimately closure of LARWQCB Case No. 907310061A associated with the leak from the gasoline tank. In November 2016, Cathay Bank submitted an Application for Port Permit (No. 161121-169) to carry out the excavation and removal of the USTs, consistent with the vacating terms of CA518.

### Project Objective

The objective of the proposed Project is to excavate and remove the three 10,000-gallon USTs (including a 10,000-gallon gasoline tank that was determined to have leaked), electrical utilities, conveyances, fuel dispensers, and all other appurtenances as well as the surrounding contaminated soils as directed by LAFD. If extensive soil and/or groundwater contamination is identified upon removal of the USTs, additional remediation may be required by the LARWQCB (see Section 2.3, *Proposed Project Construction Activities*). This potential phase of work may involve additional excavation of chemically impacted soils and/or skimming or other treatment of groundwater. Based on available information (e.g., previous investigations and monitoring), it is estimated that a volume of approximately 700 tons or 518 cubic yards (i.e., between 35 and 40 truckloads) of contaminated soil could potentially be present within a 1,600-square-foot area adjacent to the tanks.

**Project Site – Cathay Bank Removal of Leaking Underground Storage Tanks Cabrillo Marina, Berth 31**

**FIGURE 5**

## **2.3 PROPOSED PROJECT CONSTRUCTION ACTIVITIES**

Construction activities associated with Phase I include removing existing paving, excavating the surrounding soil, removing the three USTs and associated appurtenances, testing for any residual soil contamination, backfilling the excavation with clean fill, and repaving with asphalt consistent with the surrounding parking lot. Soil samples will be taken along the walls of the tank and pipeline trenches prior to backfilling to be used by LARWQCB in determining the need for additional remediation (i.e., Phase II), which would be conducted separately after the completion of all backfilling activities and repaving in Phase I.

Phase II of the proposed Project, if necessary, would include removal of existing paving, excavation of approximately 700 tons or 518 cubic yards of soil, backfilling the excavation with clean fill, and repaving with asphalt consistent with the surrounding parking lot and grade. This remediation would occur in accordance with all applicable federal, state, and local laws and regulations as enforced by various agencies (e.g., U.S. Environmental Protection Agency [USEPA], State Department of Toxic Substances Control [DTSC], and LARWQCB).

### UST Removal (Phase I)

Prior to the initiation of construction, all electrical power to the three USTs would be disconnected, residual fluids would be removed, the tanks would be degassed consistent with South Coast Air Quality Management District (SCAQMD) Rule 1149, and the tanks would be washed. Additionally, vertical shoring would be installed to ensure the continued geotechnical stability of the existing mixed-use facility, which would be located approximately 11 feet from the edge of

**Figure 6. USTs Removal**

the excavation. A minimum of a 35-foot by 35-foot area would be excavated over the existing USTs to a depth sufficient to remove the USTs as directed by LAFD (assumed to be approximately 12 feet). Following preparation activities, the concrete slab and surrounding asphalt pavement covering the three USTs (up to approximately 23 cubic yards assuming a 6-inch pavement depth over the Project area) would be demolished and recycled off-site at a permitted facility within approximately 110 miles from the Port. Approximately 290 cubic yards of soil would be required for the initial tank removal during Phase I of the proposed Project. Additionally, removal of a limited amount of chemically impacted soil would likely be implemented as directed by LAFD. During excavation, the soil would be stockpiled a minimum of 5 feet from the edge of the open excavation. Volatile organic compounds (VOCs) would be monitored during excavation activities in accordance with SCAQMD Rule 1166. Excavated soils would be removed from the Project site using haul trucks, sampled for contamination, and

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

disposed of at an approved disposal site in accordance with all regulations surrounding transport and disposal of such material. For purposes of this assessment, soil was assumed to be transported to Soil Safe, Inc., a thermal desorption facility, located at 12328 Hibiscus Road, Adelanto, California for disposal; however, these soils could be disposed of at another approved facility of similar distance from the Port.

The LAFD Inspector would oversee the degassing and rinsing of the three USTs and a marine chemist would verify that the tanks are clean and ready for removal. The tanks would be lifted from the open excavation using a crane and loaded onto flatbed trailers for recycling off-site at Ecology Recycling, located at 13780 East Imperial Hwy, Santa Fe Springs, CA 90670, or another similar facility at a similar distance from the Project site. Additionally, the proposed Project would remove electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances associated with the USTs. Following the collection of soil samples, the excavation would be backfilled with clean pea gravel material from the bottom of the excavated area to 5 feet below ground surface. A filter fabric would be installed over the pea gravel and the remaining 5 feet would be backfilled to grade and compacted to 90 percent with clean fill that meets the requirements of the *LAHD Environmental Guidance for Industrial Fill Material* (February 2016). The fill material would be sourced from Hanson Aggregates located at 13550 Live Oak Ave, Irwindale, CA 91706 or a similar facility located at a similar distance from the Project site. After the excavation has been filled, shoring would be removed and this area would be repaved with asphalt and restriped to match the existing parking lot.

### Potential Additional Soil and/or Groundwater Remediation (Phase II)

This potential phase of work may involve additional excavation of chemically impacted soils and/or treatment of groundwater following initial excavation and removal of the three USTs. Based on available information (e.g., previous investigations and monitoring reports), it is estimated that a volume of approximately 700 tons or 518 cubic yards of contaminated soil (i.e., 35-40 truckloads), from an estimated 1,600-square-foot area, could occur adjacent to the tanks and piping. The paving overlaying the excavation site (up to approximately 30 cubic yards) would be demolished and recycled off-site and the contaminated soil would be excavated, sampled for contamination, and disposed of at the DTSC-approved disposal site in accordance with all applicable and relevant laws and regulations. Following the completion of the remediation activities, the excavation would be backfilled with clean pea gravel, filter fabric, and compacted soil similar to Phase I. Additionally, similar to Phase I, the excavation under Phase II would be repaved to match the existing surrounding parking lot area.

### Construction Timing, Equipment, and Staging

#### *UST Removal (Phase I)*

The Phase I construction activities necessary to remove the three 10,000-gallon USTs would occur over approximately 12 days (see Table 1). Consistent with the City of Los Angeles Noise

Ordinance (Ordinance No. 144.331; 41.40 Los Angeles Municipal Code), construction activities would occur Monday through Friday from the hours of 7:00 AM to 5:00 PM.

**Table 1. Phase I Construction Activities Schedule**

<b>Construction Activity</b>	<b>Duration</b>
Install Shoring and Removal of Dockside Piping	3 days
Remove Concrete and Soils	3 days
Degas, Wash, and Remove Tanks	2 days
Backfill and Compact Soils	2 days
Remove Shoring, Repave, and Restripe Parking Spaces	2 days

Activities associated with the proposed Project would require the use of a crane, an excavator, a dry vacuum truck (including a portable thermal oxidizer to degas the USTs prior to removal), a backhoe, and a roller. A one-time water truck delivery would be required to provide water to rinse the USTs prior to removal. Additionally, flatbed trailers would be used to remove the three USTs and heavy haul dump trucks would remove excavated soils and deliver clean fill.

During Phase I, approximately 29 truck trips would be required to remove the pavement and excavated soil and an additional 29 truck trips would be required to deliver clean fill. (The average tandem axel commercial dump truck holds anywhere from 10 to 14 cubic yards of soil.) During the 3-day excavation period, it is anticipated that there would be a maximum of 10 truck trips per day; however, during the two-day backfill and soil compaction period, there could be as many as 15 truck trips per day. The staging area for stockpiled soils, backfill materials, construction supplies, and equipment would be located adjacent to the site on the west side of the existing building. The Project site, including the construction staging area, would be fenced and screened, which could temporarily eliminate up to eight parking spaces within the parking lot.

*Potential Additional Soil and/or Groundwater Remediation (Phase II)*

Depending on the results of the sampling of soil beneath each UST and associated pipelines and from the sidewalls of the excavation, additional excavation of a certain amount of chemically impacted soil may be necessary. This potential phase of work may involve additional excavation of chemically impacted soils and/or treatment of groundwater. Based on available information (e.g., previous investigations and monitoring reports), it is estimated that a volume of approximately 700 tons or 518 cubic yards of contaminated soil could potentially be present in an approximately 1,600-square-foot area adjacent to the tanks. These additional potential construction activities under Phase II of the proposed Project could require an additional 15 days of construction.

**Table 2. Phase II Construction Activities Schedule**

<b>Construction Activity</b>	<b>Duration</b>
Install Shoring	4 days
Remove Concrete and Soils	5 days
Backfill and Compact Soils	3 days
Remove Shoring, Repave, and Restripe Parking Spaces	3 days

As with Phase I, activities associated with Phase II would require the use of an excavator, a dry vacuum truck, a backhoe, and a roller. Additionally, heavy haul dump trucks would remove excavated soils and deliver clean fill.

During Phase II, approximately 35-40 truck trips would be required to remove the pavement and excavated soil and an additional 35-40 truck trips would be required to deliver clean fill. During the 5-day excavation period, it is anticipated that there would be a maximum of 8 truck trips per day; however, during the two-day backfill and soil compaction period, there could be as many as 20 truck trips per day. As with Phase I, the staging area for stockpiled soils, backfill materials, construction supplies, and equipment associated with Phase II would be located adjacent to the site on the west side of the existing building. The Project site, including the construction staging area, would be fenced and screened, which could temporarily eliminate up to eight parking spaces within the parking lot.

#### Construction Best Management Practices

Below is a list of construction BMPs and standard conditions that are requirements of all permits issued by the LAHD and would be implemented during Project construction. BMPs comprise regulatory compliance measures that the LAHD regularly implements as part of their activities, as appropriate. These are different from “mitigation measures,” which are defined as project specific requirements and necessary to reduce identified potentially significant adverse environmental impacts to *less-than-significant* levels. *No project-specific mitigation measures are needed to reduce impacts to less-than-significant levels.*

#### Air Quality:

- All trucks would be required to cover their loads as required by California Vehicles Code Section 23114 and consistent with the *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009).
- Fugitive dust would be controlled in compliance with SCAQMD Rule 403 and *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009). All excavated material, backfill material, exposed soil areas would be treated to prevent fugitive dust. Treatment would include, but not necessarily be limited to, periodic watering, application of environmentally safe soil stabilization material, and/or roll-

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

compaction. Watering shall be done as often as necessary and reclaimed water shall be used whenever possible.

- Consistent with SCAQMD Rule 403 and *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009) during periods of winds 25 miles per hour or greater (i.e., wind speed sufficient to cause fugitive dust to impact adjacent properties) or at the direction of the LAHD, all excavation operations would be curtailed to the degree necessary to prevent fugitive dust created by on-site activities and operations from being a nuisance or hazard, either off-site or on-site.
- Construction equipment idling time is limited to 5 minutes when not in use, consistent with the *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009) and California Air Resources Board (CARB) Airborne Toxic Control Measure to limit idling of diesel-fueled commercial motor vehicles (CCR, Title 13, Section 2485).
- Implementation of all applicable requirements for On-Road and Off-Road Trucks consistent with the *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009).

### Noise:

- The proposed Project would comply with Los Angeles Municipal Code Section 112.05, *Maximum Noise Level of Powered Equipment or Powered Hand Tools*.

### Hazardous Materials:

- A marine chemist would verify that the USTs are clean prior to removal.
- The Project would follow guidelines and procedures within the *LAHD 2016 Environmental Guidance for Industrial Fill Material*, which determine the suitability of soil and fill materials for industrial land uses and states allowable chemical concentrations.
- Maintain equipment according to manufacturer's specifications consistent with the *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009).

### Utilities:

- Underground Service Alert (USA) would be contacted to mark all known utilities on adjacent public property. If utility lines are encountered at any point during excavation, the construction crew would cease the use of heavy machinery and hand dig until the utility is fully located.

### Geology and Soils:

- A standard 12-inch high berm would be required at the top of all graded slopes associated with the excavation.
- Temporary erosion control measures would be installed for all work completed between October 1 and April 15. Approval of the proposed procedures would be required from the City of Los Angeles grading inspector.

## **Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- A soil engineer would observe and approve compaction activities. This soil engineer would certify the base elevation of the excavation prior to any compaction operations.
- No fill would be placed until the City grading inspector inspects and approves the base elevation of the excavation.
- The compaction report would be submitted to the City grading division for review and approval.

Transportation:

- Notices would be posted consistent with PortOLA policy to notify businesses and members of the public of temporary construction activities and temporary displacement of up to eight parking spaces.
- Construction site boundaries would be fenced and screened and configured in such a way to reduce parking displacement at the Cabrillo Marina to the maximum extent possible.
- Pedestrian access and sidewalks would be impeded as minimally as possible during the construction period of up to 12 days associated with Phase I. Similarly, access would be impeded as minimally as possible during the construction period of up to 15 days associated with Phase II.

## **2.4 PROJECT PERMITS AND APPROVALS**

Under CEQA, the lead agency is the public agency with primary responsibility over approval of a proposed Project. Pursuant to Section 15367, the CEQA lead agency for the Project is the LAHD. Anticipated permits and approvals issued by the lead agency that would be required to implement the proposed Project are listed below, and would indicate that the USTs and all appurtenances associated with the USTs shall be removed and the premises shall be restored consistent with existing conditions. Other permits and approvals required to implement the proposed Project that are issued by other responsible agencies are listed in Section 3, Paragraph 9.

- LAHD Coastal Development Permit (Level I);
- LAHD Harbor Engineer Permit; and
- LAHD Temporary Entry and Use Permit (TEUP) (site access and use permissions for Project construction).

### 3. INITIAL STUDY CHECKLIST

This Initial Study is prepared in accordance with CEQA Guidelines Section 15063 and CEQA Guidelines Appendix G.

1. **Project Title:** Removal of Underground Storage Tanks at Cabrillo Marina, Berth 31, Port of Los Angeles
2. **Lead Agency:** City of Los Angeles Harbor Department  
Environmental Management Division  
425 S. Palos Verdes Street  
San Pedro, CA 90731
3. **Contact Person:** Nicole Enciso, Project Manager, Environmental Management Division
4. **Project Location:** The Project site is located at 210 Whalers Walk on the Cabrillo Marina, Berth 31, Port of Los Angeles. The Cabrillo Marina is designated as Planning Area 1 in the *Port Master Plan* (LAHD 2014), which is the largest planning area, consisting of approximately 1,940 acres and more than 9.5 miles of usage waterfront (excluding Seaplane Lagoon).
5. **General Plan Designation:** Port of Los Angeles – Recreation and Commercial
6. **Zoning:** (Q)M2-1 – Quasi Public Light Industrial; APN #7440039911
7. **Description of Project:** The Project is necessary to remove three 10,000-gallon USTs underlying the Project site. The Applicant would install shoring, excavate the site, degas, wash, and remove the USTs, test for additional soil and groundwater contamination, conduct additional remediation activities as necessary, backfill the site with clean material, and repave with asphalt to be consistent with the existing parking lot.
8. **Surrounding Land Uses/Setting:** The Project site is surrounded by the Cabrillo Yacht Marina to the east and surface parking to the west, north, and south. Landside access to and from the proposed Project site is provided by a network of freeways and arterial routes. The freeway network consists of the Harbor Freeway (I-110), the Long Beach Freeway (I-710), the San Diego Freeway (I-405), and the Seaside Freeway (SR-47).

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

**9. Other Public Agencies Whose Approval is Required:**

- LARWQCB (Phase II);
- City of Los Angeles, Department of Building and Safety Permits;
- DSTC Underground Storage Tank Closure Application and Permit; and
- LAFD Permit for Tank Installation, Modification, and Removal.

**3.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED**

The environmental factors checked below would be potentially affected by the proposed project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- |   |   |  |
|---|---|--|
| <input type="checkbox"/> Aesthetics                         | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality                   |
| <input type="checkbox"/> Biological Resources               | <input type="checkbox"/> Cultural Resources                 | <input type="checkbox"/> Geology/Soils                 |
| <input type="checkbox"/> Greenhouse Gas Emissions           | <input type="checkbox"/> Hazards & Hazardous Materials      | <input type="checkbox"/> Hydrology and Water Quality   |

### 3.2 DETERMINATION

Based on this initial evaluation:

I find that the proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

I find that the proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

I find that the proposed Project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

04-26-17

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
<b>1. AESTHETICS.</b> Would the project:				
a. Have a substantial adverse effect on a scenic vista?				X
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c. Substantially degrade the existing visual character or quality of the site and its surroundings?				X
d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?				X
e. Create a new source of substantial shade or shadow that would adversely affect daytime views in the area?				X
<b>2. AGRICULTURE AND FORESTRY RESOURCES.</b> In determining whether impacts to agricultural resources are significant environmental effects, Lead Agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b. Conflict with existing zoning for agricultural use, or a Williamson act contract?				X
c. Conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned timberland production?				X
d. Result in the loss of forest land or conversion of forest land to non-forest use?				X
e. Involve other changes in the existing environment that, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?				X

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
<b>3. AIR QUALITY.</b> Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?			X	
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			X	
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?			X	
d. Expose sensitive receptors to substantial pollutant concentrations?			X	
e. Create objectionable odors affecting a substantial number of people?			X	
<b>4. BIOLOGICAL RESOURCES.</b> Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X	
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?				X
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X	

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X	
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X
<b>5. CULTURAL RESOURCES.</b> Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5?				X
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?			X	
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			X	
d. Disturb any human remains, including those interred outside of formal cemeteries?			X	
<b>6. GEOLOGY AND SOILS.</b> Would the project:				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:			X	
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
iv) Landslides?			X	
b. Result in substantial soil erosion, loss of topsoil, or changes in topography or unstable soil conditions from excavation, grading, or fill?			X	
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?				X
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				X
<b>7. GREENHOUSE GAS EMISSIONS:</b> Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
<b>8. HAZARDS AND HAZARDOUS MATERIALS:</b> Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				X
d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			X	

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				X
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?				X
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				X
h. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				X
<b>9. HYDROLOGY AND WATER QUALITY.</b> Would the project:				
a. Violate any water quality standards or waste discharge requirements?			X	
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?				X
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of stream or river, in a manner that would result in substantial erosion or siltation on- or off-site?			X	
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?			X	
e. Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	

**Final Initial Study and Negative Declaration**  
 Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
f. Otherwise substantially degrade water quality?			X	
g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				X
h. Place within a 100-year flood hazard area structures that would impede or redirect flood flows?				X
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				X
j. Inundation by seiche, tsunami, or mudflow?				X
k. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the sea level rise?				X
<b>10. LAND USE AND PLANNING.</b> Would the project:				
a. Physically divide an established community?				X
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?				X
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?				X
<b>11. MINERAL RESOURCES.</b> Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?				X

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
<b>12. NOISE.</b> Would the project result in:				
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			X	
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?				X
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			X	
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				X
<b>13. POPULATION AND HOUSING.</b> Would the project:				
a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				X
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				X
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?				X

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
<b>14. PUBLIC SERVICES.</b>				
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:			X	
i) Fire protection?			X	
ii) Police protection?				X
iii) Schools?				X
iv) Parks?				X
v) Other public facilities?				X
<b>15. RECREATION.</b>				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?				X
<b>16. TRANSPORTATION AND TRAFFIC.</b> Would the project:				
a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?			X	

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?			X	
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?				X
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X
e. Result in inadequate emergency access?			X	
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?				X
<b>17. TRIBAL CULTURAL RESOURCES.</b> Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).				X
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				X
<b>18. UTILITIES AND SERVICE SYSTEMS.</b> Would the project:				
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			X	

**Final Initial Study and Negative Declaration**  
 Underground Storage Tank Removal at Cabrillo Marina, Berth 31

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact After Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				X
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				X
d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			X	
e. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				X
f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?			X	
g. Comply with federal, state, and local statutes and regulations related to solid waste?			X	
<b>19. MANDATORY FINDINGS OF SIGNIFICANCE.</b>				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			X	
b. Does the project have impacts that are individually limited, but cumulatively considerable? "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.			X	
c. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?			X	

## 4. IMPACTS AND MITIGATION MEASURES

### 4.1 AESTHETICS

The purpose of this section is to identify and evaluate key visual and aesthetic resources in the project area and to determine the degree of visual and aesthetic impacts that would be attributable to the proposed Project.

Would the Project:

- a) Have a substantial adverse effect on a scenic vista?

**No Impact.** There are no protected or designated scenic vistas in the Project vicinity. Construction activities associated with the proposed removal of the three USTs and associated contaminated soils would be short-term and temporary. Excavation and removal of the USTs, backfill of the excavation, and repaving the Project site consistent with the surrounding parking lot would have no long-term effects on the appearance of the Project site or the overall character of Berth 31 at the Cabrillo Marina.

- b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

**No Impact.** The Project site is not visible from any eligible or designated state scenic highway. The nearest designated state scenic highway is located approximately 34 miles north of the proposed Project (Route 2, from La Cañada-Flintridge to the San Bernardino County Line). The nearest eligible state scenic highway (i.e., State Highway 1, from State Highway 19 near Long Beach to I-5 south of San Juan Capistrano) is approximately 10 miles northeast of the proposed Project site (California Department of Transportation [Caltrans] 2011). In addition to Caltrans state scenic highways, the City of Los Angeles has city-designated scenic highways. However, the proposed Project site is not visible from any city-designated scenic highways. As such, there are no scenic resources, such as trees, rock outcroppings, or historic buildings, within a scenic highway that could be affected by the proposed Project. No impacts related to scenic resources within a state scenic highway would occur with the implementation of the proposed Project.

- c) Substantially degrade the existing visual character or quality of the site and its surroundings?

**No Impact.** As described in Section 2.3, *Proposed Project Construction Activities*, Phase I construction activities necessary to remove the USTs and associated contaminated soils would occur over a construction period of approximately 12 days (refer to Table 1). During that time construction equipment including excavators, backhoes, cranes, and heavy haul trucks, would be present at the Project site. However, following removal of the USTs the proposed Project would backfill the excavation, compact the fill, and repave the project site with new asphalt

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

consistent with the surrounding parking lot. Implementation of the proposed Project would not degrade the existing visual character of the site or its surroundings. Similarly, Phase II construction activities, if necessary, would occur over a construction period of approximately 15 days (refer to Table 2). During that time, construction equipment would be temporarily present at the Project site; however, following the removal of the contaminated soils, the proposed Project would backfill the excavation, compact the fill, and repave the project site with new asphalt consistent with the surrounding parking lot. Implementation of the proposed Project would not degrade the existing visual character of the site or its surroundings.

- d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

**No Impact.** As described in Section 2.3, *Proposed Project Construction Activities* consistent with the City of Los Angeles Noise Ordinance, construction activities associated with the proposed Project would occur Monday through Friday from the hours of 7:00 AM to 5:00 PM. As such, lighting for the proposed excavation and removal of the USTs and associated contaminated soils would not be required. Following the completion of construction activities under Phase I and Phase II, including repaving of the Project site, the proposed Project would neither introduce a new source of light or glare nor any new reflective materials. Consequently, there would be no impacts associated with light and glare as a result of the proposed Project.

- e) Create a new source of substantial shade or shadow that would adversely affect daytime views in the area?

**No Impact.** Project improvements are underground only and would not include the installation of any above ground structures that could create a new source of shade or shadows. As such, the proposed Project would have no impacts related to the creation of shade or shadows.

## 4.2 AGRICULTURE AND FORESTRY RESOURCES

The purpose of this section is to identify and evaluate agricultural and forestry resources in the proposed Project area and to determine the degree of impacts that would be attributable to the proposed Project.

Would the Project:

- a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

**No Impact.** The proposed Project would not involve the conversion of farmland to non-agricultural use. The California Department of Conservation's Farmland Mapping and Monitoring Program identifies categories of agricultural resources that are significant and require special consideration. According to the Farmland Map, the Project site is not located in

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

an area designated as Prime Farmland, Unique Farmland or Farmland of Statewide Importance. Therefore, there would be no impact to farmland associated with the implementation of the proposed Project

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

**No Impact.** The Project site is neither zoned for agricultural uses nor under a Williamson Act contract. No lands zoned for agriculture are present in the Project vicinity. Therefore, the proposed Project would not conflict with existing zoning for agricultural use, or a Williamson Act contract.

c) Conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned timberland production?

**No Impact.** The Project site is located on fully developed marina and no agricultural land, forest land, or timberland zoning is present in the Project vicinity. Further, the proposed Project would not result in a change in use of the existing site or surrounding area. Therefore, the proposed Project would not conflict with existing zoning or cause rezoning of forest or timberland. No impact would occur with the implementation of the proposed Project.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

**No Impact.** The Project site is not designated as forest land and no loss or conversion of forest land would result from the implementation of the proposed Project.

e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?

**No Impact.** No farmlands exist near the Project site and as a result the proposed Project would have no effect on farmlands.

### 4.3 AIR QUALITY

This section includes a description of existing air quality conditions in the proposed Project area and analyses of potential short-term air quality impacts of the proposed Project. The methods of analysis for construction, mobile source, odor, and toxic air contaminant (TAC) emissions are consistent with the guidelines of the SCAQMD. Air emissions were estimated for the proposed Project. The proposed Project is limited to construction only (i.e., excavation and removal of USTs and remediation), with no operational activity after completion, hence there are no operational emissions. Sources contributing to air emissions during construction activities consist of off-road construction equipment and on-road construction vehicles (e.g., heavy haul trucks), described in further detail below.

Would the Project:

- a) Conflict with or obstruct implementation of the applicable air quality plan?

**Less than Significant.** The Project site is located within the South Coast Air Basin (Basin), which is currently classified as a nonattainment area for National Ambient Air Quality Standards (NAAQS) 1-hour and 8-hour ozone (O<sub>3</sub>) and particulate matter less than 2.5 microns in diameter (PM<sub>2.5</sub>). In order to address regional nonattainment issues the SCQAMD, with contributions from and collaborations with the CARB and Southern California Association of Governments (SCAG), developed four comprehensive Air Quality Management Plans (AQMP) since the late 1990's, each of which included updates to air quality standards and attainment deadlines. An AQMP serves as a regional blueprint for achieving federal air quality standards. A proposed project would be considered inconsistent with an air quality plan if it is inconsistent with the assumptions regarding land use and emissions in the approved 2016 AQMP, which was recently adopted on March 3, 2017. The proposed Project is a construction project including excavation and UST removal over a short construction period, with no ongoing operations on the Project site after completion. Therefore, the proposed Project would be consistent with the assumptions regarding land use and motor vehicle / construction equipment emissions within the 2016 AQMP and would not obstruct implementation of the Plan. Short-term construction vehicles and equipment would work over a short-term period and would be subject to the requirements of the BMPs listed in Section 2.3 and the Clean Air Action Plan (CAAP) (POLA and Port of Long Beach 2010) and SCAQMD Localized Significance Thresholds (LSTs) as described below. Based on the discussion provided above, the proposed Project would have less than significant impacts on applicable air quality plans or clean air programs. No mitigation would be required.

- b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

**Less than Significant.** Based on criteria set by the SCAQMD, a project would have the potential to violate an air quality standard or contribute substantially to an existing violation if construction emissions would exceed thresholds of significance for daily maximum construction emissions or localized peak day construction emissions. Sources of emissions for the proposed Project include the following construction equipment and vehicles: heavy haul dump trucks, flatbed trailers, a water truck, a crane, an excavator, a dry vacuum truck (including a portable thermal oxidizer to degas the USTs prior to removal), a backhoe, and a roller. Table 3 and Table 4 describe the maximum emissions of nitrogen oxides (NO<sub>x</sub>), carbon monoxide (CO), particulate matter less than 10 microns in diameter (PM<sub>10</sub>), and PM<sub>2.5</sub> that would occur during the excavation and grading activities associated with the proposed Project. The proposed Project would comply with SCAQMD Rule 1149, including the completion and submittal of Initial Notification and Followup Notification consistent with Rule 1149(c)(7) (SCAQMD 2012). The analysis assumed that construction activities would comply with SCAQMD Rule 403 to control

## **Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

fugitive dust, resulting in a 61 percent reduction. Additionally, the Project would comply with *LAHD Sustainable Construction Guidelines for Reducing Air Emissions* (LAHD 2009) and CARB Airborne Toxic Control Measure to limit idling of diesel-fueled commercial motor vehicles (CCR, Title 13, Section 2485) to minimize idling emissions from diesel-fueled vehicles (i.e., diesel-powered vehicles are not permitted to idle for a period of more than 5 minutes). Compliance with these requirements is consistent with and meets the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. The emissions analysis also assumes that all equipment would be operating simultaneously, which is highly conservative. The number and type of construction equipment, heavy haul truck trips (e.g., transport of concrete, asphalt, and soil, one-time water truck delivery, and removal of the USTs for off-site recycling), and worker trips were evaluated in CalEEMod, which was used to estimate potential emissions resulting from proposed Project during Phase I and Phase II construction activities. Based on this analysis, the proposed Project was determined to have less than significant impact on air quality.

### *UST Removal (Phase I)*

Construction activities associated with Phase I include removing existing paving, excavating the surrounding soil, removing the three USTs and associated appurtenances, testing for any residual soil contamination, backfilling the excavation with clean fill, and repaving with asphalt consistent with the surrounding parking lot. Activities associated with the proposed Project would require the use of a crane, an excavator, a dry vacuum truck (including a portable thermal oxidizer to degas the USTs prior to removal), a backhoe, and a roller. Additionally, during Phase I, approximately 29 truck trips would be required to remove the excavated soil and an additional 29 truck trips would be required to deliver clean fill. Additional truck trips would include a one-time water truck delivery for rinsing the USTs as well as the use of three flatbed trucks for the removal of the USTs for off-site recycling. During Phase I, short-term Project construction emissions associated with these activities would occur over a 12-day period.

As shown in Tables 3 and 4, construction emissions associated with Phase I would not exceed SCAQMD's thresholds of significance for peak day construction emissions or localized peak day construction emissions. Therefore, construction-related impacts would be less than significant.

### *Potential Additional Soil and/or Groundwater Remediation (Phase II)*

Phase II of the proposed Project, if necessary, would include removal of existing paving, excavation of approximately 700 tons or 518 cubic yards of soil, backfilling the excavation with clean fill, and repaving with asphalt consistent with the surrounding parking lot. Activities associated with Phase II would require the use of an excavator, a backhoe, and a roller. Removal of additional contaminated soil under Phase II would also require approximately 35 to 40 additional truck trips. During Phase II short-term Project emissions associated with these additional construction activities would occur over a 15-day period.

**Table 3. Peak Day Construction Emissions<sup>1</sup> (lbs/day)**

	PM <sub>10</sub> Exhaust	PM <sub>10</sub> Fugitive Dust	PM <sub>2.5</sub> Exhaust	PM <sub>2.5</sub> Fugitive Dust	PM <sub>10</sub> total	PM <sub>2.5</sub> total	NO <sub>x</sub>	SO <sub>x</sub>	CO	VOC
Phase I	1.6	2.8	1.5	0.7	4.3	2.1	54.4	0.1	24.0	3.6
<u>SCAQMD Daily CEQA Significance Threshold<sup>2</sup></u>	N/A	N/A	N/A	N/A	150	55	100	150	550	75
<b>Exceeds Threshold?</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
Phase II	1.9	2.5	1.8	0.6	4.5	2.4	55.2	0.1	28.0	4.3
<u>SCAQMD Daily CEQA Significance Threshold<sup>2</sup></u>	N/A	N/A	N/A	N/A	150	55	100	150	550	75
<b>Exceeds Threshold?</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Prepared by: iLanco Environmental, LLC  
 Notes: Values may not add up due to rounding.  
 Emissions from on-site and off-site construction equipment and construction vehicles were calculated using CalEEMod. Emissions from tank degassing and thermal oxidizer combustion exhaust were calculated using USEPA Tanks 4.09d and thermal oxidizer emission factors, respectively.  
 Tank degassing activities would occur during Phase I only.  
 Emissions might not add precisely due to rounding.  
 PM<sub>10</sub> exhaust and PM<sub>10</sub> fugitive emissions do not have separate thresholds. They are presented for informational purposes to highlight that fugitive dust emissions are a large component of total PM emissions.  
 61% control of fugitive dust is assumed as part of the project.  
<sup>1</sup>Refer to Appendix A for CalEEMod output sheets; overall emissions based on rounded totals.  
<sup>2</sup>SCAQMD 2015

- c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?

**Less than Significant.** The SCAQMD recommends that a proposed project’s potential contribution to cumulative emissions should be assessed using the same significance criteria as those for project-specific emissions. As discussed in 4.3(b), the proposed Project would not generate construction emissions during Phase I or Phase II, if necessary, that would approach or exceed the SCAQMD thresholds. Therefore, the proposed Project would not generate a cumulatively considerable increase in emissions of the pollutants for which the Basin is in nonattainment, and impacts to air quality would be less than significant.

d) Expose sensitive receptors to substantial pollutant concentrations?

**Less than Significant.** For the purposes of a CEQA analysis, the SCAQMD considers a sensitive receptor to be a residence, hospital, school, or convalescent facility where persons could be exposed to substantial pollutant concentrations (SCAQMD 2003). The nearest sensitive receptors to the Project site include “liveaboards” or people living on boats in nearby boat slips within the Cabrillo Marina. The Project site is located approximately 125 feet from the nearest liveaboard to the north and 145 feet from the nearest liveaboard to the east. Additionally, commercial land uses, including a hotel, are located approximately 300 feet east of the Project site. SCAQMD LSTs aim to protect sensitive receptors from the effects of air pollutants. As described in 4.3(b) and shown in Table 4, construction-related emissions would be nominal and would not exceed LSTs. There would be no operational emissions associated with the proposed Project following the removal of the USTs and associated contaminated soils. Therefore, impacts to sensitive receptors would be less than significant.

**Table 4. Localized Peak Day Construction Emissions<sup>1</sup> (lbs/day)**

	<b>PM<sub>10</sub> Exhaust</b>	<b>PM<sub>10</sub> Fugitive Dust</b>	<b>PM<sub>2.5</sub> Exhaust</b>	<b>PM<sub>2.5</sub> Fugitive Dust</b>	<b>PM<sub>10</sub> total</b>	<b>PM<sub>2.5</sub> total</b>	<b>NO<sub>2</sub></b>	<b>CO</b>
Phase I On-Site Emissions	1.6	1.2	1.5	0.2	2.8	1.7	30.4	18.4
SCAQMD Localized Significance Threshold <sup>2</sup>	N/A	N/A	N/A	N/A	4	3	57	585
<b>Significant?</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
Phase II On-Site Emissions	1.8	1.1	1.7	0.2	2.8	1.8	32.0	22.5
SCAQMD Localized Significance Threshold <sup>2</sup>	N/A	N/A	N/A	N/A	4	3	57	585
<b>Significant?</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>N/A</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Prepared by: iLanco Environmental, LLC

Notes: Values may not add up due to rounding.

<sup>1</sup>Refer to Appendix A for CalEEMod output sheets; overall emissions based on rounded totals.

<sup>2</sup>SCAQMD 2009, 2009; SCAQMD LST look-up tables included in SCAQMD Final Localized Significance Threshold Methodology, Appendix C, based on Source Receptor Area 4 (South Coastal Los Angeles County), less than 1 acre construction area and approximately 125 feet (i.e., 25 meters) to the nearest sensitive receptor were used to estimate localized impacts based on the following: 1) Day disturbed area of 1 acre; 2) 25 meter PM<sub>10</sub> exhaust and PM<sub>10</sub> fugitive dust emissions do not have separate thresholds<sup>1</sup>. They are presented for informational purposes to highlight that fugitive dust emissions drive PM emissions

61% control of fugitive dust is assumed as part of the project.

- e) Create objectionable odors affecting a substantial number of people?

**Less than Significant.** Construction of the proposed Project could produce discernible odors typical of construction sites associated with diesel exhaust from heavy construction equipment operations on-site. Additionally, following removal of the USTs and associated contaminated soils, asphalt odors would be expected during repaving of the Project site. Such odors would be a temporary source of nuisance to adjacent sensitive receptor uses (e.g., liveaboards). Based on mandatory compliance with SCAQMD Rules and the site's distance from sensitive receptors (i.e., more than 125 feet from the nearest liveaboard to the north and 145 feet from the nearest liveaboard to the east), construction would not cause substantial odor-related impacts to a substantial number of people in the Project vicinity. Additionally, the construction activities under Phase I and Phase II would not cause substantial odor-related impacts to the nearby hotel uses located approximately 500 feet to the South. Therefore, impacts associated with objectionable odors would be less than significant.

#### **4.4 BIOLOGICAL RESOURCES**

The purpose of this section is to identify and evaluate biological resources in the project area and to determine the degree of biological impacts that would be attributable to the proposed Project.

Would the Project:

- a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

**Less than Significant.** The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) system was reviewed to gather information regarding potential federally listed species that could occur within the vicinity of the Project site (USFWS 2017). The USFWS IPaC system identified three endangered species, California least tern (*Sterna antillarum browni*), Palos Verdes blue butterfly (*Glaucopsyche lygdamus*), and Pacific pocket mouse (*Perognathus longimembris pacificus*) and two threatened species, western snowy plover (*Charadrius alexandrinus nivosus*), and coastal California gnatcatcher (*Poliioptilla californica californica*) with the potential to occur within, or be affected by activities on the site. Additionally, 27 species of migratory birds are known to occur in the vicinity of the Project site (USFWS 2017). However, the Project site consists of a paved surface lot within a heavily used marina. Given the developed nature of the Project area and considering that the Project site has already been disturbed, the likelihood of any sensitive or special status species being present is very low. No riparian habitat or other sensitive natural communities occur at the Project site and no trees or other vegetation would be removed as part of the proposed Project. Project-related construction activities on land under Phase I and Phase II of the proposed Project would be

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

temporary and minor and would not result in a loss of individuals or habitat for rare, threatened, endangered, protected or species of special concern. Further, there are no waterside construction improvements under Phase I or Phase II of the proposed Project that would affect any marine life. Therefore, the proposed Project would not have an adverse effect on any sensitive or special status species or habitats and would not conflict with any regional plans, policies, or regulations. Due to the developed nature of the site, the lack of critical habitat, and the short-term duration of construction, impacts to special status species would be less than significant.

- b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

**No Impact.** As discussed in Section 4.4(a) above, the proposed Project site is completely paved and does not contain riparian habitat or other sensitive communities. As such, no impacts would occur as a result of the proposed Project.

- c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

**Less than Significant.** The proposed Project site does not contain any federally jurisdictional wetlands. The closest recognized saltwater wetland is located 115 feet east of the Project and is associated with the Cabrillo Marina. With implementation of construction BMPs as outlined in Section 2.3, *Proposed Construction Activities*, no runoff or other indirect impacts to wetland habitats in the vicinity would occur under Phase I or Phase II of the proposed Project. Additionally, Phase I of the proposed Project would remove USTs and Phase I and Phase II (if necessary) would remove contaminated soils. These activities would have beneficial impacts on groundwater quality at the project site. The proposed Project would have a less than significant effect on federally jurisdictional wetlands as defined by Section 404 of the Clean Water Act (CWA).

- d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

**Less than Significant.** The Port provides valuable habitat for foraging, resting, and breeding by numerous bird species. The proposed Project site, however, is located within a developed parking lot, which does not support special status species, and is not a major migration corridor or wildlife corridor. Additionally, there are no waterside improvements associated with the proposed Project that could potentially impact marine wildlife. Further, construction activities associated with the proposed removal of the USTs would involve minimal equipment and construction personnel for approximately 12 days. Phase II activities, as necessary, would also

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

involve minimal equipment and construction personnel for an additional 15 days. However, similar to Phase I these activities would be short term and temporary. As such, there are no long-term impacts to the movement of wildlife species or the use of wildlife nursery sites as a result of the proposed Project.

- e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

**No Impact.** The proposed Project site is located in Berth 31 of the Cabrillo Marina, a heavily developed area of the Port. The Project site is entirely paved and requires no vegetation or tree removal under either phase of construction. The Project site is located adjacent to a parking lot median, which contains two landscape trees; however, the trees would be preserved in place during construction and would not be affected by the proposed Project. As such, the proposed Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

- f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

**No Impact.** As previously mentioned, no habitat for any special status or sensitive biological species exists at the project site or in the vicinity. Accordingly, no Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved habitat conservation plan applies to the project site. HCPs are administered by the USFWS and are intended to identify how impacts would be mitigated when a project impacted an endangered species. The County of Los Angeles has established Significant Ecological Areas (SEAs) to preserve a variety of biological communities for public education, research, and other nondisruptive outdoor uses. The proposed Project is not located in a SEA; the nearest SEA is the California least tern nesting area at the southern tip of Pier 400, approximately 1 mile southeast of the Project site. In addition, there are no HCPs currently in place at the Port. Therefore, no impact would occur as a result of the implementation of Phase I or Phase II of the proposed Project.

## 4.5 CULTURAL RESOURCES

This section addresses potential impacts on cultural resources that could result from implementation of the proposed Project. Cultural resources customarily include archaeological resources, ethnographic resources, and those of the built environment (architectural resources). Though not specifically a cultural resource, paleontological resources (fossils predating human occupation) are also considered in this evaluation, as they are discussed in Appendix G of the State CEQA Guidelines (Environmental Checklist Form).

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

Would the Project:

- a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

**No Impact.** A historical resource is defined in Section 15064.5(a)(3) of the CEQA Guidelines as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historic resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period or method of construction; representing the work of an important creative individual; or possessing high artistic values. Resources listed in or determined eligible for inclusion in the California Register, included in a local register, or identified as significant in a historic resource survey are also considered historical resources under CEQA. The Project site is located on an existing paved site that has previously been disturbed. The proposed Project would not result in any alternations or modifications to historical resources. There are no known historic resources at the site nor would any be disturbed or compromised as a result of the proposed Project. The proposed Project would have no impact on historical resources.

- b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

**Less than Significant.** The potential to discover an unknown archaeological resource within the Project site is highly unlikely as the site is underlain by manmade fill. Further, previous disturbance of the site, including excavation for the initial installation of the USTs in 1985 and past soil remediation efforts would have disturbed or destroyed any potential historic or archaeological resources that may have occurred beneath the surface. As such, there would be virtually no possibility of encountering intact cultural resources within the Project site or immediate surrounding vicinity. Nevertheless, the proposed Project would adhere to CEQA Guidelines (CCR Title 14, Section 15064.5), which states that construction activities would cease in the affected area in the highly unlikely event an archaeological discovery is made. Once the discovery has been evaluated by a qualified archaeologist, (see 36 Code of Federal Regulations [CFR] 800.11.1 and CCR, Title 14, Section 15064.5 [f]) and if the resource is found to not be significant, the work can resume. If the resource is found to be significant, they shall be avoided or shall be treated consistent with Section 106 or State Historic Resource Preservation Officer Guidelines. As such, the proposed Project would not cause a substantial adverse change in the significance of an archaeological resource pursuant to state CEQA Guidelines Section 15064.5. Therefore, the proposed Project would have a less than significant impact to archaeological resources with adherence to applicable regulatory requirements.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

**Less than Significant.** No unique geologic features or paleontological resources are known to exist in or around the Project site. The site is underlain by manmade fill, is already paved, and has experienced considerable previous disturbance, described above in Section 4.5(b). Therefore, there is very little potential to encounter paleontological resources during construction. However, because there is a remote chance of discovering previously unknown paleontological resources, the proposed excavation and removal of the USTs and associated contaminated soils would have a less than significant impact on paleontological resources.

- d) Disturb any human remains, including those interred outside of formal cemeteries?

**Less than Significant.** As the Project site is underlain by manmade fill and is already paved and experienced considerable previous disturbance, described above in Section 4.5(b) and (c), there is a very low potential to encounter or disturb any human remains. Nevertheless, California Health and Safety Code Section 7050.5, CEQA Section 15064.5, and Public Resources Code Section 5097.98 mandate that in the event of an inadvertent or unanticipated discovery of any human remains in a location other than a dedicated cemetery, work shall stop immediately. If the coroner determines the remains are Native American, the coroner shall contact the Native American Heritage Council (NAHC). The NAHC shall identify the most likely descended from the deceased Native American and make recommendations for means of treating or disposing of the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98. With compliance with existing regulations prescribed in California Health and Safety Code Section 7050.5, CEQA Section 15064.5, and Public Resources Code Section 5097.98, impacts to human remains would be less than significant.

## 4.6 GEOLOGY AND SOILS

This section describes the regional and local geologic and soil characteristics of the proposed Project area.

Would the Project:

- a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
- i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the state geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

**Less than Significant.** The proposed Project site is located within the seismically active Southern California region and has the potential to be subjected to ground shaking hazards

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

associated with earthquake events on active faults. The proposed Project site is located approximately 0.4 mile east of the Palos Verdes fault zone and is not located within an Alquist-Priolo Earthquake Fault Zone. While the proposed Project site is not located within a fault zone, it is located within an landslide and liquefaction zone as defined by the California Department of Conservation (California Department of Conservation 2015).

Proposed project construction under Phase I and Phase II, if necessary, would be confined to paved and previously disturbed areas of Berth 31 within the Cabrillo Marina. Prior to excavation activities under both phases, shoring would be installed at the Project site to ensure the stability of the nearby mixed-use facility, which would be located as close as 11 feet from the excavation (refer to Section 2.3, *Proposed Project Construction Activities*). Following the completion of construction activities under both phases, the excavations would be backfilled, compacted, and paved with asphalt consistent with the surrounding parking lot. No habitable structures are proposed and as such the proposed Project site would have limited potential for damage from seismic activity. Further, any potential damage to the Project site as a result of seismic activities (e.g., pavement cracking) would not create impacts to public health or safety. Finally, the project would not increase overall visitation to the area, and thus would not increase public exposure to seismic hazards. The proposed Project, therefore, would result in a less than significant impact to earthquake faults or seismic shaking.

- ii) Strong seismic ground shaking?

**Less than Significant.** Please see the response to 4.6 (a)(i) above.

- iii) Seismic-related ground failure, including liquefaction?

**Less than Significant.** Please see the response to 4.6 (a)(i) above.

- iv) Landslides?

**Less than Significant.** The proposed Project site is flat with no significant natural or graded slopes. The excavation and removal of the USTs and associated contaminated soils would not increase the potential for landslides at the Project site. Following the completion of construction activities, the excavation would be backfilled, compacted, and paved with asphalt consistent with the surrounding parking lot and grade. No habitable structures are proposed and as such the proposed Project site would have limited potential for damage from seismic activity or landslides. Therefore, impacts to the potential for landslides would be less than significant.

- b) Result in substantial soil erosion or the loss of topsoil?

**Less than Significant.** Construction activities under Phase I would be limited to the excavation and removal of three USTs and approximately 290 cubic yards of soil over approximately a 35-foot by 35-foot area. As described in Section 2.3, *Proposed Construction Activities* following removal of the three USTs, the base and the sidewalls of the excavation would be sampled as

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

directed by LAFD, and the excavation would be backfilled, compacted, and repaved. If extensive soil and/or groundwater contamination is identified during Phase I, additional remediation of the soil and/or groundwater may be required by the LARWQCB under a separate Phase II of construction. This potential phase of work may involve a new excavation of up to approximately 700 tons or 518 cubic yards of additional contaminated soil from an estimated 1,600-square-foot area adjacent to the tanks proposed for removal under Phase I. Following the removal of residual contamination, the area would be backfilled with clean fill, compacted, and paved with asphalt consistent with the surrounding parking lot. The proposed Project would not create new areas of impervious surface or generate any new sources of runoff. During all construction activities under Phase I and Phase II, if necessary, the construction BMPs described in Section 2.3, *Proposed Project Construction Activities* would be implemented, as appropriate. For example, all excavated material, backfill material, exposed soil areas would be treated to prevent fugitive dust. Therefore, impacts to soil erosion or the loss of topsoil will be less than significant.

- c) Be located on a geological unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

**Less than Significant.** The proposed Project site is located within an area susceptible to landslides and liquefaction (California Department of Conservation 2015). However, construction is minor and involves removal of three USTs and backfilling with clean fill that meets the requirements of the LAHD Environmental Guidance. Implementation of the proposed Project would have little potential to create a landslide, lateral spreading, subsidence, liquefaction or collapse. Prior to the placement of fill or repaving, consistent with City grading requirements, the Applicant's soil engineer would observe and approve compaction activities and a compaction report would be submitted to the City grading division for review and approval. Therefore, it is highly unlikely that the proposed Project would result in the creation of unstable geologic units or soils. Therefore, impacts would be less than significant.

- d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

**No Impact.** No habitable buildings would be constructed as a part of Phase I or Phase II of the proposed Project. No impact to life or property due to expansive soils would occur as a result of implementing the proposed Project.

- e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

**No Impact.** The proposed Project presents no need for additional capacity or any alternative wastewater disposal system, as there is no additional land use or operation. Therefore, there would be no impacts associated with the use of septic tanks or wastewater disposal systems.

#### **4.7 GREENHOUSE GASES**

This section includes a discussion of the potential greenhouse gas (GHG) emission impacts associated with the proposed Project. The methods of analysis for construction and operational emissions are consistent with the guidelines of the SCAQMD and LAHD's standard protocol.

GHG emissions were estimated for the baseline conditions and the proposed Project. The proposed Project is limited to construction only (i.e., excavation, removal of USTs, remediation and site restoration), with no operational activity after completion, hence there are no operational emissions. Sources contributing to GHG emissions during construction include the following construction equipment and vehicles: heavy haul dump trucks, flatbed trailers, a water truck, a crane, an excavator, a dry vacuum truck (including a portable thermal oxidizer to degas the USTs prior to removal), a backhoe, and a roller. The construction contractor shall be required to comply with applicable construction BMPs and LAHD Sustainable Construction Guidelines (see Section 2.3, *Proposed Project Construction Activities*). Carbon dioxide equivalent (CO<sub>2</sub>e) emissions analysis utilized the CalEEMod model.

##### *CEQA Significance Thresholds*

State CEQA Guidelines Section 15064.4(b) sets forth the factors that should be considered by a lead agency when assessing the significance of impacts from GHG emissions on the environment. These factors include:

- The extent to which a project may increase or reduce GHG emissions compared with the existing environmental setting;
- Whether project emissions exceed a threshold of significance that the lead agency determines applicable to a project; and
- The extent to which a project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project's incremental contribution of GHG emissions.

The guidelines do not specify significance thresholds and allow the lead agencies discretion in how to address and evaluate significance based on these criteria.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

The SCAQMD adopted an interim CEQA significance threshold of 10,000 metric tons per year of CO<sub>2</sub>e (MT/yr CO<sub>2</sub>e) (2008) for industrial projects where SCAQMD is the lead agency. This threshold was used to evaluate the proposed Project's GHG emissions under CEQA. If estimated GHG emissions remain below this threshold, they are less than significant.

LAHD has determined the SCAQMD-adopted interim industrial threshold of 10,000 MT/yr CO<sub>2</sub>e to be suitable for the proposed Project following reasons:

- The SCAQMD interim threshold used as the basis for its development, Governor Schwarzenegger's June 1, 2005 Executive Order S-3-05 which set emission reduction targets of reducing GHG emissions to 2000 levels by 2010, to 1990 levels by 2020, and to 80 percent below 1990 levels by 2050. The 2020 target is the core of the California Global Warming Solutions Act of 2006, widely known as Assembly Bill (AB) 32.
- The proposed Project's primary GHG sources are construction equipment and vehicle mobile sources. The SCAQMD industrial source threshold is appropriate for projects with mobile emission sources. California Air Pollution Control Officers Association (CAPCOA) guidance considers industrial projects to include substantial GHG emissions associated with mobile sources. SCAQMD, on industrial projects for which it is the lead agency, uses the 10,000 MT/yr threshold to determine CEQA significance by combining a project's stationary source and mobile source emissions. Although the threshold was originally developed for stationary sources, SCAQMD staff views the threshold as conservative for projects with both stationary and mobile source because it is applied to a larger set of emissions and therefore captures a greater percentage of projects than would be captured if the threshold was only used for stationary sources.
- The SCAQMD industrial source threshold is appropriate for projects with sources that use primarily diesel fuel. Although most of the sources that were considered by the SCAQMD in the development of the 10,000 MT/yr threshold are natural gas-fueled, both natural gas and diesel combustion produce CO<sub>2</sub> as the dominant GHG. Furthermore, the conversion of all GHGs ~~species into at a~~ CO<sub>2</sub>e ensures that all the GHG emissions from any source, regardless of fuel type, can be evaluated equitably and weighted accurately.

After considering these guidelines, LAHD has set the following threshold for use in this IS/ND to determine the significance of proposed Project-related GHG impacts. The proposed Project would create a significant GHG impact if it:

- a) Generates GHG emissions that, either directly or indirectly, that may have a significant impact on the environment?

Table 5 below shows the proposed Project's annual GHG emissions.

**Table 5. Annual GHG Emissions – Proposed Project**

	CO <sub>2</sub> (MT/yr)	CH <sub>4</sub> (MT/yr)	N <sub>2</sub> O (MT/yr)	CO <sub>2</sub> e (MT/yr)
Phase I and II	70	0	0	70
Significance Threshold <sup>2</sup>	-	-	-	10,000
<b>Exceeds Threshold?</b>	-	-	-	<b>No</b>
Prepared by: iLanco Environmental, LLC Notes: a) One metric ton equals 1,000 kilograms, 2,205 lbs, or 1.1 U.S. (short) tons. b) CO <sub>2</sub> e = the carbon dioxide equivalent emissions of all GHGs combined. The carbon dioxide equivalent emission rate for each GHG represents the emission rate multiplied by its global warming potential (GWP). The GWPs are 1 for carbon dioxide (CO <sub>2</sub> ); 21 for methane (CH <sub>4</sub> ); and 310 for nitrous oxide (N <sub>2</sub> O). <sup>1</sup> Refer to Appendix A for CalEEMod output sheets; overall emissions based on rounded totals. <sup>2</sup> SCAQMD 2015				

**Less than Significant.** Based on criteria set by the SCAQMD, a proposed project would have the potential to violate an air quality standard or contribute substantially to an existing violation if construction emissions would exceed thresholds of significance in Table 5.

The proposed Project would primarily generate increased GHG emissions over the short-term related to operation of construction equipment and heavy haul truck trips associated with the export of contaminated soils and the import of clean fill. The total emissions from the proposed Project construction under Phase I and Phase II, if necessary, were modeled using CalEEMod with a conservative assumption that GHG emissions would occur within 2017 for both Phase I and Phase II activities.

During Phase I, activities associated with the proposed Project would require the use of a crane, an excavator, a dry vacuum truck (including a portable thermal oxidizer to degas the USTs prior to removal), a backhoe, and a roller. Additionally, during Phase I, approximately 29 truck trips would be required to remove the excavated soil and an additional 29 truck trips would be required to deliver clean fill. Additional truck trips would include a one-time water truck delivery for rinsing the USTs as well as the use of three flatbed trucks for the removal of the USTs for off-site recycling. During Phase I, short-term Project construction emissions associated with these activities would occur over a 12-day period. Activities associated with Phase II would require the use of an excavator, a backhoe, and a roller. Removal of additional contaminated soil under Phase II would also require approximately 35 to 40 additional truck trips. During Phase II short-term Project emissions associated with these additional construction activities would occur over a 15-day period.

The total estimated emissions from construction and hauling activity for both Phase I and Phase II would be 70 MT/yr CO<sub>2</sub>e, which is well below the SCAQMD recommended significance threshold of 10,000 MT/yr CO<sub>2</sub>e. Increases in emissions of GHGs associated with the implementation of the proposed Project would be short-term and less than significant.

**Informational assessment:** Consider whether the Project is consistent with certain statewide, regional and local plans and policies.

As noted above, CEQA Guideline Section 15064.4(b) provides that one factor to be considered in assessing the significance of GHG emissions on the environment is “the extent to which a project complies with regulations or requirements adopted to implement a statewide, regional or local plan for the reduction or mitigation of GHG emissions.”

Several state, regional and local plans have been developed that set goals for the reduction of GHG emissions over the next few years and decades. Some of these plans and policies (notably, Executive Order S-3-05 and AB 32) were taken into account by the SCAQMD in developing the 10,000 MT/yr CO<sub>2</sub>e threshold. However, no regulations or requirements have been adopted by relevant public agencies to implement those plans for specific projects, within the meaning of CEQA Guidelines Section 15064.4(b) (3). (See Center for Biological Diversity v. Cal. Dept. of Fish and Wildlife [Newhall Ranch] [2015] 62 Cal.4<sup>th</sup> 204, 223.) Consequently, no CEQA significance assessment based upon compliance with such regulations or requirements can be made for the proposed Project. Nevertheless, for the purpose of disclosure, LAHD has considered for informational purposes only, whether the proposed Project activities and features are consistent with federal, state or local plans, policies or regulations for the reduction of GHG emissions, as set forth below:

The State of California is leading the way in the United States, related to GHG reductions. Several legislative and municipal targets for reducing GHG emissions, below 1990 levels have been established. Key examples include:

- Senate Bill (SB) 32
  - 1990 levels by 2020
  - 40 percent below 1990 levels by 2030
- AB 32
  - 80 percent below 1990 levels by 2050
- City of Los Angeles Sustainable City Plan
  - 45 percent below 1990 levels by 2025
  - 60 percent below 1990 levels by 2035
  - 80 percent below 1990 levels by 2050

LAHD has been tracking GHG emissions, in terms of CO<sub>2</sub>e since 2005 through the LAHD municipal GHG inventory and the annual inventory of air emissions. Port-related GHG emissions started making significant reductions since 2006, reaching a maximum reduction in CO<sub>2</sub>e of 15 percent from 1990 levels in 2013, as shown in Figure 7. Subsequently, 2014 and 2015 saw GHG levels rise due to a period of port congestion that arose from circumstances outside of the control of either the LAHD or its tenants. This event illustrates a major challenge related to managing GHG-related emissions, as events outside the control of LAHD or its

individual tenants will continue to have a varying degree of impact on the progress of reduction efforts.

**Figure 7. GHG Emissions 2005-2015**

**Figure 8. Actual GHG Emissions 2005-2015 & 2015-2050 GHG Compliance Trajectory**

LAHD and its tenants have initiated a number of wide-ranging strategies to reduce all port-related GHGs, which includes the benefits associated with the CAAP, Zero Emission Roadmap, Energy Management Action Plan (EMAP), operational efficiency improvements, and land use and planning initiatives. Looking toward 2050, there are several unknowns that will affect future GHG emission levels. These unknowns include grid power portfolios; maritime industry preferences of power sources and fuel types for ships, harbor craft, terminal equipment, locomotives, and trucks; advances in cargo movement efficiencies; the locations of manufacturing centers for products and commodities moved; and increasing consumer demand for goods. The key relationships that have led to operational efficiency improvements to date are the cost of energy, current and upcoming regulatory programs, and the competitive nature of the goods movement industry. We anticipate these relationships will continue to produce benefits with regards to GHG emissions for the foreseeable future.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

Nevertheless, with the very aggressive targets shown in Figure 8 above, it is not possible at this time to determine whether Port-wide emissions or any particular Project applicant will be able to meet the compliance trajectory shown. Compliance will depend upon future regulations or requirements that may be adopted, future technologies that have not been identified or fully developed at this time, or any other Port-wide GHG reduction strategies that may be established. As a result, while LAHD will continue to work with its tenants to implement aggressive GHG reduction measures to meet the compliance trajectory that is shown, LAHD cannot with certainty confirm compliance with these future plans and policies at this time.

### 4.8 HAZARDS AND HAZARDOUS MATERIALS

This section discusses the potential for the proposed Project to expose people to hazards and hazardous materials. Hazardous materials are defined as substances with physical and chemical properties of flammability, corrosivity, reactivity, or toxicity, which may pose a threat to human health or the environment. Hazardous materials management is subject to multiple laws, policies, and regulations. Enforcement agencies at the state level include two branches of the California Environmental Protection Agency (CalEPA): the DTSC and the LARWQCB. The federal enforcement agency is the USEPA.

Would the Project:

- a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

**Less than Significant.** As described in Section 2.2, *Project Background and Objectives*, the Project site is listed as an open Leaking Underground Storage Tank (LUST) Cleanup Site (LARWQCB Case No. 907310061A). Phase I of the proposed Project would remove the three 10,000-gallon USTs and all associated electrical utilities, pumps, conveyance lines, fuel dispensers, and other appurtenances associated with the USTs. Up to approximately 290 cubic yards of contaminated soils would be excavated, sampld for contamination, and transported off-site to a DTSC-approved disposal site in accordance with all applicable and relevant laws and regulations as a part of Phase I construction activities. All excavation and backfilling operations would be observed for the presence of free petroleum products or contaminated soil. The proposed Project would follow guidelines and procedures within the *LAHD 2016 Environmental Guidance for Industrial Fill Material*, which determine the suitability of soil and fill materials for industrial land uses and states allowable chemical concentrations. Further, depending on whether additional contamination is discovered during Phase I of the proposed Project, it is estimated that up to 700 tons or 518 cubic yards of additional contaminated soils (up to 40 truck trips) would be transported and disposed off-site during separate Phase II construction activities. The storage, handling, and disposal of the USTs and excavated soils would be in compliance with DTSC, USEPA, Occupational Safety and Health Administration (OSHA), and LAFD regulations governing such activities. If any groundwater contamination is observed, the free product would be skimmed and removed. LAHD's Director of Environmental

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

Management and LARWQCB would be notified of all occurrences of soil and/or groundwater contamination.

Soils would be sampled for contamination in accordance with the *LAHD 2016 Environmental Guidance for Industrial Fill Material*. Any contaminated soils would be removed from the Project site, treated, and/or disposed of at the appropriate facilities in accordance with applicable regulations. Contaminated soil would be stockpiled on visqueen sheeting (i.e., polyethylene plastic sheeting), covered with visqueen, and characterized with appropriate signage and disposed of properly. Additional remediation actions would occur in the event that contaminated soils and/or groundwater are encountered.

With adherence to the abovementioned regulations and standards as well as all construction related BMPs described under Section 2.3, *Proposed Project Construction Activities*, impacts would be less than significant.

- b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

**Less than Significant.** Refer to Section 4.8(a) above. Given the history of contaminated soils and groundwater at the Project site, the potential exists for construction workers to be exposed to these materials during excavation, the handling of the USTs, and/or hauling of soils during construction activities associated with Phase I and Phase II, if necessary, of the proposed Project. If contaminated materials are encountered or suspected during construction activities, standard regulatory practices would be applied and construction workers would adhere to the approved Health and Safety Plan (refer to Section 2.3, *Proposed Project Construction Activities*). Construction workers would be equipped with appropriate Personal Protective Equipment (PPE) and would temporarily cease work in the event that hazardous materials are suspected or discovered.

As described in the Section 2.3, *Proposed Project Construction Activities*, LAFD would perform inspections and monitor the removal of the USTs. If additional soil contamination and/or groundwater contamination is observed during sampling, LAHD would notify LARWQCB, which would oversee the completion of additional remediation activities under Phase II, if necessary. Overall, the proposed Project will remove hazardous materials from the area, which would have a beneficial effect on fire protection and safety in the area. There are no new hazards or hazardous materials nor anything that would create a new impact to fire protection or fire safety. Therefore, impacts to fire safety would be less than significant.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

**No Impact.** The Project site is not within one-quarter mile of an existing or proposed school. The nearest school is the Port of Los Angeles High School which is located approximately 3 miles west of the proposed Project. As such there would be no impact to schools.

- d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

**Less than Significant.** The Project site is currently included on the list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (i.e., "Cortese List") maintained by the California DTSC. Remedial actions and monitoring have occurred on the Project site since 2009. As described in Section 2.3, *Project Background and Objectives* contaminants of concern include MTBE, TBA, and BTEX. Although contaminants primarily affect soils underlying the site, MTBE and TBA are considered to be highly soluble in groundwater. Current monitoring results indicate that remediation to date at the site has reduced in contaminant concentrations in the groundwater, including MTBE by 90 percent, benzene by 80 percent, gasoline by 89 percent, and diesel by nearly 100 percent (Seatec Environmental, Inc. 2015).

As described in Section 2.3, *Proposed Project Construction Activities* if extensive soil and/or groundwater contamination is identified, additional remediation of the soil and/or groundwater would be required by the LARWQCB. Any contaminated material would be removed and disposed of at Soil Safe, Inc. or an approved disposal site located at a similar distance from the Project site, in accordance with all regulations surrounding transport and disposal. If any groundwater contamination is observed, the free product would be skimmed and removed and LAHD would notify LARWQCB. With adherence to construction BMPs listed in Section 2.3, *Proposed Project Construction Activities* and compliance with regulations pertaining to the handling and disposal of hazardous materials, impacts would be less than significant.

- e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

**No Impact.** The Project site is not located near an existing public airport. The nearest airports are Torrance Airport, approximately 7 miles northwest, and Long Beach Airport, approximately 10 miles northeast of the site. Therefore, no impact would occur associated with airport-related hazards.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

**No Impact.** A helicopter-landing pad for Island Express is located at Berth 95 approximately 2.15 miles to the north of the Project site. Only small helicopters operate from this location and transit primarily via the Main Channel. The proximity of the heliport would not result in a safety hazard for people working in the Project area. The proposed Project would have no effect related to private airstrips. Accordingly, there would be no impact.

- g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

**No Impact.** The proposed Project involves temporary construction activities associated with the proposed removal of the USTs and associated contaminated soils under Phase I as well as additional remediation activities under Phase II, if necessary. During all construction activities associated with the proposed Project, emergency access would be maintained. Following the excavation and removal of the USTs, the Project site would be backfilled, compacted, and repaved with asphalt consistent with the surrounding parking lot. As such, following the completion of construction activities, the proposed Project will not impair or physically interfere with an adopted emergency response plan.

- h) Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

**No Impact.** Per the Safety Element of the City of Los Angeles General Plan, the Project site is not located in an area designated as Very High Fire Hazard Severity Zone and there are no wildlands within the vicinity of the Project site. Therefore, no impact related to wildland fires would occur with the implementation of the proposed Project.

## 4.9 HYDROLOGY AND WATER QUALITY

This section describes the existing conditions relating to hydrology and water quality and the potential impacts associated with the proposed Project. In addition, this analysis includes a discussion on the potential sea-level rise (SLR) impacts that may result with implementation of the proposed Project.

Would the Project:

- a) Violate any water quality standards or waste discharge requirements?

**Less than Significant.** Implementation of the proposed Project would remove three USTs as well as up to approximately 290 cubic yards of contaminated soils under Phase I. Additionally, as described in the Project Description, if additional soil contamination is encountered during

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

testing, such soils would be removed and remediated under a separate Phase II of construction, reducing the potential for negative effects to water quality. Construction activities under both phases, as necessary, would not result in substantial soil exposure and no new areas of impervious surface would be created by the Project. In addition, these activities would not result in any direct waste or water discharges, and any affected soil will be removed as part of implementation of the proposed Project. Additionally, no wastewater discharge or modifications to discharge systems would occur with implementation of the proposed Project. If wastewater discharge is required for any reason during Project-related construction activities the Applicant would obtain an NPDES permit from the LARWQCB, as necessary. The Project requires a Coastal Development Permit and Harbor Engineer Permit from LAHD, which will include standard conditions, including BMPs, related to the landside improvements. With compliance with all permit conditions and the use of construction BMPs throughout the Project's duration, impacts to water quality standards or waste discharge requirements would be less than significant.

- b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

**No Impact.** Implementation of the proposed Project would result in no impact to groundwater resources. The Project would not deplete groundwater supplies or interfere substantially with groundwater recharge. Groundwater in the harbor area is south of the Dominquez Gap Barrier and impacted by saltwater intrusion (salinity) and is, therefore, unsuitable for use as drinking water. In addition, the proposed Project site is entirely covered with impermeable surfaces and does not support surface recharge of groundwater. The proposed Project site would involve very little excavation of concrete with immediate replacement after the excavation is complete. Therefore, no impacts to groundwater resources would occur with the implementation of the proposed Project.

- c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

**Less than Significant.** The proposed Project site is entirely paved, and no alterations would be made to the existing drainage or waterway systems in the area. During construction, temporary erosion and sedimentation control measures would be installed to minimize erosion during excavation. Following removal of the USTs and completion of any remediation, the Project site would be repaved with asphalt, similar to the surrounding parking lot. Therefore, there would be less than significant impacts to drainage patterns.

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- d) Substantially alter the existing drainage pattern of the site or area, including the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

**Less than Significant.** Please see Section 4.9(c) above. The Project site is fully developed with impervious surfaces and the Project would not result in a substantial change to flood conditions or drainage patterns.

- e) Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

**Less than Significant.** No alterations to existing drainage systems are proposed with implementation of the Project. With implementation of construction BMPs, including temporary erosion control measures, less than significant effects to stormwater runoff and drainage systems would occur as a result of the proposed Project.

- f) Otherwise substantially degrade water quality?

**Less than Significant.** Implementation of Phase I and Phase II, if necessary, of the proposed Project would not violate any water quality standards or waste discharge requirements. The proposed Project would comply with the City of Los Angeles Municipal Code and all other applicable federal, state, and local regulations prior to Project approval and would result in less than significant impacts.

- g) Place housing within a 100-year flood hazard area as mapped on a federal flood hazard boundary or Flood Insurance Rate Map or other flood hazard delineation map?

**No Impact.** No housing or other habitat structures are proposed with implementation of the proposed Project. Therefore, no impact would occur.

- h) Place within a 100-year flood hazard area structures, which would impede or redirect flood flows?

**No Impact.** The proposed Project is located within Zone AE (elevation 9), an SFHA subject to inundation by the 1% (100-year) annual chance flood (Federal Emergency Management Agency [FEMA] 2008). Because the Project would not place any structures within the area, there would be no impacts to flood flows.

- i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

**No Impact.** The proposed Project would be confined to a relatively small paved area. There are no dams or levees near the proposed Project and the proposed Project does not have the potential to create or contribute to a risk of a levee or dam failure. Implementation would not

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

expose people or structures to risk involving flooding. Therefore, no impacts to flooding from the failure of a levee or dam would occur as a result of the Project.

j) Inundation by seiche, tsunami, or mudflow?

**No Impact.** According to the Tsunami Inundation Map for Emergency Plan (California Department of Conservation 2009), the Project site is located within a tsunami inundation area. However, the proposed Project would be confined to existing paved areas and previously disturbed areas. No new areas of access would be added, and no new buildings would be constructed for the proposed Project. Therefore, no increased exposure to tsunami inundation areas, and no impact from inundation would occur.

k) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the SLR?

**No Impact.** Due to its geographic location, the infrastructure and operations of the Port would be vulnerable to SLR by nature. As the proposed Project would not involve the construction of any new structures, no people or structures would be exposed to significant risk due to SLR as a result of the proposed Project. Impacts associated with risks from SLR would not occur.

### 4.10 LAND USE AND PLANNING

This section contains a description and analysis of the land use and planning considerations that would result from proposed Project implementation.

Would the Project:

a) Physically divide an established community?

**No Impact.** The proposed Project would involve only short-term construction activities occurring in two separate phases, as necessary. No long-term separation of land uses or disruption of access between land use types would occur as a result of the proposed Project. Therefore, implementation of the proposed Project would not divide an established community and no impact would occur.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

**No Impact.** The proposed Project would not conflict with a specific plan, general plan, or zoning ordinance. The Project site is zoned [Q]M2-1 under the City of Los Angeles Zoning Ordinance and would continue to have the same land uses as under existing conditions. The proposed Project would not alter the land use of the site or surrounding area, and would not conflict with

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

the *Port Master Plan* (LAHD 2014) or any applicable land use plans. Therefore, no impact would occur with the implementation of the proposed Project.

- c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

**No Impact.** As discussed in Section 4.4(f), the site is not part of any HCP or NCCP. No impact would occur with the implementation of the proposed Project.

### 4.11 MINERAL RESOURCES

The purpose of this section is to identify and evaluate key mineral resources in the proposed Project area and to determine the degree of impacts that would be attributable to the proposed Project.

Would the Project:

- a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

**No Impact.** According to the California Department of Conservation, no known mineral resources underlie the Project site. The Wilmington Oil Field, the third largest oil field in the U.S., is located approximately 2 miles north of the site (California Department of Conservation 2014). However, the proposed Project would not create any obstacles to oil extraction operations associated with the Wilmington Oil Field. No known mineral resources would be impacted by the proposed Project and therefore no impact would occur as a result of the proposed Project.

- b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

**No Impact.** The proposed Project site is not located within a mineral resource recovery site delineated in the *Port Master Plan* (LAHD 2014). As such, no loss of availability to mineral resources would occur and no impact would occur as a result of the proposed Project.

### 4.12 NOISE

The purpose of this section is to identify sensitive noise receptors in the proposed Project area and to determine the degree of noise impacts that would be attributable to the proposed Project.

Would the Project Result In:

- a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

**Less than Significant.** As described in Section 2.3, *Proposed Project Construction Activities* consistent with the City of Los Angeles Noise Ordinance, the Applicant would perform all construction activities Monday through Friday from the hours of 7:00 AM to 5:00 PM. The Los Angeles Municipal Code Section 112.05, *Maximum Noise Level of Powered Equipment or Powered Hand Tools*, details that the maximum noise level powered equipment may produce within a distance of 500 feet from a City residential zone is 75 A-weighted decibels (dBA) at a distance of 50 feet, unless compliance is technically infeasible. Technically infeasible means that the noise limitations cannot be attained during use of the equipment even with the use of mufflers, shields, sound barriers and/or other noise reduction techniques.

Construction-related noise and groundborne vibration would be generated by excavation activities, including operation of a backhoe, crane, compactor, and heavy haul trucks. Additional sources of noise may occur from general truck movement as well as jackhammers and smaller power tools. Construction noise levels for the Project were evaluated using data published by the U.S. Department of Transportation (DOT), as indicated in Table 6. The nearest sensitive receptors to the Project site include liveboards in nearby boat slips within the Cabrillo Marina. The Project site is located approximately 125 feet from the nearest liveboard to the north and 145 feet from the nearest liveboard to the east. Due to the distance from residential areas, and the short-term nature of the construction Project, impacts to noise are anticipated to be less than significant.

**Table 6. Noise Ranges of Typical Construction Equipment**

<b>Construction Equipment</b>	<b>Noise Levels in dBA <math>L_{eq}</math> at 50 Feet</b>
Trucks	82–95
Jackhammers	81–98
Compressors	75–87
Concrete Mixers	75–88
Concrete Pumps	81–85
Back Hoe	73–95
Note: Machinery equipped with noise control devices or other noise-reducing design features does not generate the same level of noise emissions as that shown in this table. Source: U.S. DOT <i>Construction Noise Handbook</i> (2006)	

- b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

**Less than Significant.** Excavation activities during construction would result in varying degrees of temporary ground vibration, depending on the specific construction equipment used and operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. Given the nearest sensitive

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

receptors include liveboards that are situated in the harbor waters, by their very nature groundbourne vibrations would not be perceptible from boats. Within residential zones located more than 0.4 miles from the Project site, groundbourne vibration would be imperceptible. Any potential impacts related to groundborne noise levels would be short-term from excavation activities that would be limited to the 12-day construction period during Phase I. If additional soil contamination and/or groundwater contamination is identified during Phase I, additional excavation activities occurring during a separate 15-day period would generate additional groundborne noise, during Phase II of the proposed Project. Nevertheless, as these construction activities would be short-term and temporary, impacts related to groundborne noise levels would be less than significant.

- c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

**No Impact.** The noise that is anticipated to occur from construction under Phase I and Phase II, if necessary, of the proposed Project would be short-term and would not result in a permanent increase in noise levels. Following the completion of construction activities, the proposed Project would have no impact on ambient noise in the Project vicinity.

- d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

**Less than Significant.** Please see Section 4.12(a). Construction noise would be in compliance with Municipal Codes Sections 41.40 and 112.05 and impacts would be less than significant.

- e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

**No Impact.** The nearest airports are Torrance Airport, approximately 7 miles northwest, and Long Beach Airport, approximately 10 miles northeast of the site. The proposed Project is not located within an airport land use plan. Therefore, no impacts are anticipated to occur.

- f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

**No Impact.** A helicopter-landing pad for Island Express is located at Berth 95 approximately 2.15 miles to the north of the Project site. Only small helicopters operate from this location and transit primarily via the Main Channel. The proposed excavation and construction activities would be located too far from the helicopter-landing pad to effect or be affected by helicopter noise. Therefore, construction workers would not be exposed to excessive noise levels. Additionally, implementation of the proposed Project would not result in the construction of any

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

habitable structures that could be affected by helicopter noise over the long-term. Therefore, no impact would occur with the implementation of the proposed Project.

### 4.13 POPULATION AND HOUSING

This section describes potential impacts to population and housing associated with the proposed Project.

Would the Project:

- a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

**No Impact.** The proposed Project would not establish new housing or extend any roads. Construction employment opportunities provided by the proposed Project would not result in household relocation by construction workers due the small scale and short-timeline of construction activities. The proposed Project would not affect population or housing located within the project area, nor in the vicinity; therefore, there would be no population growth impacts as a result of the proposed Project.

- b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

**No Impact.** Please see the response to 4.13(a) above.

- c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

**No Impact.** Please see the response to 4.13(a) above.

### 4.14 PUBLIC SERVICES

This section evaluates public services impacts associated with the implementation of the proposed Project in terms of fire protection, police protection, schools, parks, and other public services.

Would the Project:

- a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:

i) Fire Protection?

**Less than Significant.** The LAFD provides fire protection services as well as emergency medical (paramedic) services within the City of Los Angeles. LAFD No. 110, located at Berth 43, is the closest station to the Project site (POLA 2017). During construction, emergency access to the Project vicinity would be maintained for emergency service vehicles. Further, the LAFD inspector would supervise all construction-related activities, ensuring safety during the 12-day construction period during Phase I. Similarly, emergency access would also during construction activities associated with Phase II, which would occur over a separate 15-day period. Following the excavation and removal of the tanks, the proposed Project would not result in a long-term increase in demand for fire protection services. Therefore, impact to fire protection services would be less than significant.

ii) Police protection?

**No Impact.** The Los Angeles Port Police (Port Police) is the primary law enforcement agency within the Port. The Port Police are responsible for patrol and surveillance of the Port property including 12 square miles of landside property and 43 miles of waterfront. The Los Angeles Police Department (LAPD) provides police protection to the entire City of Los Angeles. The proposed Project site is located within the LAPD Harbor Division Area, which includes a 27.5-square-mile area including Harbor City, Harbor Gateway, San Pedro, Wilmington, and Terminal Island.

Construction of the proposed Project, under Phase I and Phase II, if necessary, is not anticipated to result in temporary interruption and/or delays for law enforcement. Trip generation during construction would be minimal and short-term and would not result in roadway closures. The proposed Project construction would not increase demand for law enforcement and no new facilities would be required. Therefore, implementation of the proposed Project would have no impact on police protection.

iii) Schools?

**No Impact.** No new residential units would be constructed as a part of the proposed Project, and the proposed Project would not result in new permanent populations that require school facilities. No new students would be generated and no increase in demand on local schools would result from implementation of the proposed Project, therefore no impact would occur.

iv) Parks?

**No Impact.** The proposed Project does not include development of any residential uses and would not generate any new permanent residents that would increase the demand on local parks. Therefore, no impact related to parks would occur with the implementation of the proposed Project.

- v) Other public facilities?

**No Impact.** The proposed Project does not include development of residential uses and would not generate any new permanent residents that would increase the demand on other public services or facilities. As such, no impacts to other public facilities would occur from the implementation of the proposed Project.

#### **4.15 RECREATION**

This section evaluates recreation impacts associated with the implementation of the proposed Project. The analysis addresses construction-related and operational impacts and the associated potential impact to any surrounding local parks or other recreation facilities that would occur as a result of the proposed Project.

Would the Project:

- a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

**No Impact.** The proposed Project is short-term construction project that would not increase demand on existing or planned recreational facilities, including boat facilities at the Cabrillo Marina. Therefore, the proposed Project would not result in an increased demand on existing parks and recreational facilities such that substantial physical deterioration would occur or be accelerated; therefore, no impact would occur.

- b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

**No Impact.** The proposed Project would not include the development of, or require the construction of recreational facilities that would physically affect the environment. Therefore, no impact would occur with the implementation of the proposed Project.

#### **4.16 TRANSPORTATION AND TRAFFIC**

The purpose of this section is to identify and evaluate transportation and traffic conditions in the proposed Project area and to analyze the potential short-term transportation and traffic impacts of the proposed Project.

Would the Project:

- a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

**Less than Significant.** According to the Los Angeles County Congestion Management Program (CMP), a Traffic Impact Analysis (TIA) should be conducted at all CMP arterial monitoring intersections, including monitored freeway on-ramps or off-ramps, where a proposed project would add 50 or more trips during either the AM weekday peak hour (7:00 AM – 9:00 PM) or the PM weekday peak hour (4:00 PM to 6:00 PM) and at all mainline freeway monitoring locations where the project will add 150 or more trips, in either direction, during the AM or PM weekday peak hours (County of Los Angeles Metropolitan Transportation Authority 2010). The City of Los Angeles states that a Technical Memorandum is required when the project is likely to add 25 to 42 AM or PM peak hour trips, and the adjacent intersection(s) are presently operating at Level of Service (LOS) E or F (City of Los Angeles 2016). Additionally, the guidelines state that a Traffic Study is required when the project is likely to add 43 or more AM or PM peak hour trips. Construction-related activities associated with the proposed Project would only require approximately four construction workers. As such, the effect of construction worker commutes on surrounding roadway segments and intersections would be negligible during the AM and PM peak hours. As described in Section 2.3, *Proposed Construction Activities*, approximately 29 truck trips would be required to remove the excavated soil, and an additional 29 trips would be required to deliver clean fill under Phase I construction activities. During the three-day excavation period, it is anticipated that there would be a maximum of 10 truck trips per day. During the two-day backfill and soil compaction period, there could be as many as 15 truck trips per day. However, these trips would be spaced out throughout the day and would avoid the AM and PM weekday peak hours to the extent feasible. These heavy haul truck trips would not approach the thresholds Los Angeles County CMP thresholds triggering a TIA or the City of Los Angeles thresholds triggering a Technical Memorandum or Traffic Study.

If contaminated soils are found within the site during Phase I construction activities, the LARWQCB may require additional Phase II construction activities. During these additional remediation activities, which would occur following the completion of all Phase I construction activities, approximately 35-40 truck trips would be required to remove the excavated soil and an additional 35-40 truck trips would be required to deliver clean fill. During the 5-day excavation period, it is anticipated that there would be a maximum of 8 truck trips per day; however, during the two-day backfill and soil compaction period, there could be as many as 20 truck trips per day. However, similar to the truck trips during Phase I, these trips would be spaced out throughout the day and would not approach the Los Angeles County CMP thresholds trigger a TIA or the City of Los Angeles thresholds triggering a Technical Memorandum or Traffic Study.

The proposed Project, including Phase I and Phase II construction activities, would not result in significant traffic trip generation and would not conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system. In

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

addition, the Project would not encourage or promote non-motorized transit and would not result in the deterioration of transportation service standards, transportation infrastructure, or transit. Impacts from the construction associated with the proposed Project would be short-term and less than significant.

- b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

**Less than Significant.** Implementation of the proposed Project would not increase visitation to the Port, and therefore would not increase overall levels of traffic or congestion on any CMP roads or intersections. Although the proposed Project would result in additional trips to the site during construction and removal of soil, these impacts would be limited and short-term. Therefore, impacts to CMP standards would be less than significant.

- c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that result in substantial safety risks?

**No Impact.** The nearest airports are Torrance Airport, approximately 7 miles northwest, and Long Beach Airport, approximately 10 miles northeast of the site. Therefore, the project has no potential to increase traffic levels or shift a location of air traffic levels or patterns.

- d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

**No Impact.** The proposed Project does not include any alterations to ingress, egress or circulation patterns within the site and vicinity and would not interfere with any existing access. As described in Section 2.3, *Proposed Project Construction Activities*, notices would be posted consistent with Port policy to notify businesses and members of the public of temporary construction activities and associated hazards. Additionally, if oversized-transport vehicles are necessary to transport heavy construction equipment or materials on state highways, the Applicant would obtain all necessary Caltrans transportation permits. Therefore, no impacts would occur under implementation of the proposed Project.

- e) Result in inadequate emergency access?

**Less than Significant.** The proposed Project would result in minimal traffic increases during a 12-day period associated with Phase I construction activities, and during a separate 15-day period associated with Phase II construction activities, if necessary. During construction activities, all access routes for emergency services in the vicinity of the Project site would be maintained. No aspect of the proposed Project would impair or degrade emergency access. Therefore, the proposed Project would not result in inadequate emergency access, and impacts are anticipated to be less than significant.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

**No Impact.** The proposed Project would not alter the land use of the site or surrounding area, and would not conflict with any applicable land use plans. As described in Section 2.3, *Proposed Project Construction Activities*, during construction, the Project site boundaries would be fenced and screened and configured in such a way to reduce parking displacement at the Cabrillo Marina to the maximum extent possible. Additionally, pedestrian access and sidewalks would be impeded as minimally as possible during the construction period of up to 12 days associated with Phase I. Similarly, access would be impeded as minimally as possible during the construction period of up to 15 days associated with Phase II. The proposed Project would not conflict with policies, plans, or programs supporting alternative transportation, (e.g., bicycles, buses, carpools, vanpools, ridesharing, walking).

### 4.17 TRIBAL CULTURAL RESOURCES

This section evaluates impacts related to tribal cultural resources associated with the implementation of the proposed Project.

AB 52, which went into effect on July 1, 2015, established a consultation process with all California Native American Tribes on the NAHC List and required consideration of Tribal Cultural Values in the determination of project impacts and mitigation. AB 52 established a new class of resources, tribal cultural resources, defined as a site feature, place, cultural landscape, sacred place or object, which is of cultural value to a Tribe that is either: (1) on or eligible for the California Historic Register or a local historic register; or (2) treated by the lead agency, at its discretion, as a traditional cultural resource per Public Resources Code 21074 (a)(1)(A)-(B).

Public Resources Code Section 21083.09, added by AB 52, required the California Natural Resources Agency to update Appendix G of the CEQA Guidelines to address tribal cultural resources. Pursuant to Government Code Section 11346.6, on August 8, 2016 the California Natural Resources Agency adopted and amended the CEQA Guidelines to include consideration of impacts to tribal cultural resources. These amendments separated the consideration of paleontological resources from tribal cultural resources and updated the relevant sample questions to add specific consideration of tribal cultural resources.

Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).

**No Impact.** As discussed in Section 4.5, *Cultural Resources*, the potential to discover an unknown tribal cultural resource within the Project site is highly unlikely as the site is underlain by manmade fill. Previous disturbance of the site, including excavation for the initial installation of the USTs in 1985 and past soil remediation efforts would have destroyed any potential tribal cultural resources that may have occurred beneath the surface. No evidence of tribal cultural resources have been identified within or adjacent to the project site and no “unexpected resources” are anticipated based on previous archeological studies at the Cabrillo Marina (LAHD 2002). Therefore, the proposed Project would not result in any impacts to known tribal cultural resources.

- b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

**No Impact.** Please see the response to 4.17(a), above.

### 4.18 UTILITIES AND SERVICE SYSTEMS

This section evaluates impacts related to utilities and service systems associated with the implementation of the proposed Project in terms of water service, wastewater, solid waste and stormwater. The proposed project is limited to construction only. As described in Section 2.3, *Proposed Project Construction Activities* USA would be contacted to mark all known utilities on adjacent public property. If utility lines are encountered at any point during excavation, the construction crew would cease the use of heavy machinery and hand dig until the utility is fully located.

Would the Project:

- a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

**Less than Significant.** The proposed Project would be confined to an existing paved area within Berth 31. Construction would not require a LARWQCB discharge permit. No alterations would be made to the existing water drainage systems that would affect wastewater or stormwater facilities. There would be no new employees or operational changes under the proposed Project that would generate wastewater. The USTs would be degassed consistent with SCAQMD Rule 1149, washed in place, and affected soils would be removed as part of project implementation. Temporary erosion control measures will be implemented as described

**Final Initial Study and Negative Declaration**

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

in Section 2.3, *Proposed Project Construction Activities*. Therefore, no impacts to wastewater treatment requirements would occur as a result of Project implementation.

- b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

**No Impact.** Please see the response to 4.17(a) above. No impact would occur with the implementation of the proposed Project.

- c) Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

**No Impact.** Please see the response to 4.17(a) above. No impact would occur with the implementation of the proposed Project.

- d) Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed?

**Less than Significant.** The Project would require water in order to wash the USTs prior to removal. This water would either be sourced on-site (e.g., fire hydrant connection) or imported to the site via a water truck for one-time use. Construction water use would be limited by task and time and would not represent a long-term increase in demand on available water supplies. After completion of the Project, no new demands to water supplies would occur. Therefore, impacts would be less than significant.

- e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

**No Impact.** Please see the response to Section 4.17(a) above. No impact would occur with the implementation of the proposed Project.

- f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

**Less than Significant.** As outlined in Section 2.3, *Proposed Construction Activities*, the three USTs would be transported off-site to Ecology Recycling, or a similar approved recycling facility at a similar distance from the Project site. Contaminated soils would be hauled off-site to Soil Safe, Inc. or an approved and permitted facility at a similar distance from the Project site. Similarly, the existing concrete slab would be demolished and hauled to a permitted recycling facility located within 110 miles of the Project site. If additional soil remediation activities are found to be necessary, up to 700 tons or 518 cubic yards of soil would be removed under Phase II construction activities and would be properly disposed of as described in Section 2.3,

*Proposed Construction Activities.* Implementation of the proposed Project is not expected to significantly affect any local landfills' ability to accommodate waste. All waste would be disposed of in accordance with the City of Los Angeles' Solid Waste Integrated Resource Plan (City of Los Angeles 2013). Therefore, impacts to landfills and solid waste are expected to be minimal and less than significant.

- g) Comply with federal, state, and local statutes and regulations related to solid waste?

**Less than Significant.** The proposed Project would be required to conform to the policies and programs of the City of Los Angeles' Solid Waste Integrated Resource Plan (City of Los Angeles 2013). Compliance with the Solid Waste Integrated Resource Plan would ensure sufficient permitted capacity to serve the proposed Project. As such, impacts would be less than significant.

#### **4.19 MANDATORY FINDINGS OF SIGNIFICANCE**

- a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

**Less than Significant.** The project has been determined to have no impacts or less than significant impacts. As discussed in Section 4.4, *Biological Resources*, because the project site is located in a developed marina, there are no rare or endangered habitats or protected plant or wildlife species. In addition, because the proposed Project has no waterside improvements, it would not cause a fish or wildlife population to drop below self-sustaining levels or threaten to eliminate a plant or wildlife community.

As discussed in Section 4.5, *Cultural Resources*, impacts to cultural resources would be less than significant because the entire Project site is underlain by manmade fill, zoned for industrial purposes, and has been extensively disturbed by previous development. As a result, no known examples of major periods of California history or prehistory would be eliminated with implementation of the Project. Additionally, there is no demolition of any historic building or structures associated with the proposed Project. Therefore, the proposed Project would not degrade the quality of the environment and impacts would be less than significant.

## Final Initial Study and Negative Declaration

Underground Storage Tank Removal at Cabrillo Marina, Berth 31

- b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

**Less than Significant.** The proposed Project would result in no impacts or less than significant impacts to all resource areas. Because of the small scale and localized effects of the proposed Project, the potential incremental contribution would not be cumulatively considerable. Implementation of the Project will not result in a change of operations at the Port. Removal of the USTs and associated contaminated soils would result in environmental benefits to geology and soils, water quality, and hazardous materials. Impacts from construction will be short-term and less than significant, which would not contribute substantially to a cumulatively considerable impact.

- c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

**Less than Significant.** Based on the analysis provided in this IS, the proposed Project would not result in any significant impacts on an individual or cumulative level, and would not result in any significant adverse effects on human beings. As described in the analyses contained in the IS, the proposed Project would result in less than significant effects on human beings.

## 5. PROPOSED FINDING

LAHD has prepared this IS/ND to address the environmental effects of the proposed Project. Based on the analysis provided in this IS/ND, LAHD finds that the proposed Project would not have a significant effect on the environment.

## **6. PREPARERS AND CONTRIBUTORS**

This IS/ND was prepared for and under the direction of LAHD by Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler). Members of the professional staff are listed below:

City of Los Angeles Harbor Department:

- Christopher Cannon, Director of Environmental Management
- Lisa Ochsner, Marine Environmental Manager
- Laura Masterson, Marine Environmental Supervisor
- Shirin Sadrpour, Marine Environmental Supervisor
- Nicole Enciso, Environmental Specialist
- Erin Sheehy, Environmental Specialist
- Rita Brenner, Environmental Specialist
- Kenneth Stanberry, Senior Real Estate Officer

Amec Foster Wheeler:

- Rita Bright, Project Manager
- Nick Meisinger, Deputy Project Manager
- Aaron Goldschmidt, Senior Technical Advisor
- Julia Pujo, Lead Environmental Analyst
- Erlin Worthington, Environmental Analyst

iLanco Environmental, LLC

- Lora Granovsky, Air Quality Specialist

A1 – Summary Air Quality Calculations

A2 – CalEEMod Output Annual

A3 – CalEEMod Output Winter

Project:  
Prepared by:  
Date:

**POLA B31 UST Removal**  
iLanco Environmental, LLC  
4/20/2017

**Peak Day Construction Emissions Without Mitigation - Proposed Project**

	Emissions (lb/day)									
	PM10 Exhaust	PM10 Fugitive Dust	PM2.5 Exhaust	PM2.5 Fugitive Dust	PM10 total	PM2.5 total	NOX	SOX	CO	VOC
Phase I	1.6	2.8	1.5	0.7	4.3	2.1	54.4	0.1	24.0	3.6
Significance Threshold	na	na	na	na	150	55	100	150	550	75
<b>Exceeds Threshold?</b>	na	na	na	na	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
Phase II	1.9	2.5	1.8	0.6	4.5	2.4	55.2	0.1	28.0	4.3
Significance Threshold	na	na	na	na	150	55	100	150	550	75
<b>Exceeds Threshold?</b>	na	na	na	na	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
<b>Notes:</b>										
Emissions from on-site and off-site construction equipment and construction vehicles were calculated using CalEEMod. Emissions from tank degassing and thermal oxidizer combustion exhaust were calculated using EPA Tanks 4.09d and thermal oxidizer emission factors, respectively.										
Tank degassing activities would occur during Phase I only.										
Emissions might not add precisely due to rounding.										
PM10 exhaust and PM10 fugitive emissions do not have separate thresholds. They are presented for informational purposes to highlight that fugitive dust emissions are a large component of total PM emissions.										
61% control of fugitive dust is assumed as part of the project.										

**Annual GHG Emissions Without Mitigation - Proposed Project**

	Emissions (mty)			
	CO2	CH4	N2O	CO2e
Phase I and II	70	0.0	0.0	70
Significance Threshold				10,000
<b>Exceeds Threshold?</b>				<b>No</b>
<b>Notes:</b>				
Emissions might not add precisely due to rounding.

Notes:

- [1] Each tank is 10,000 gal
  - [2], [3] Thermal Oxidizer design specifications for EMECS 42 MMBtu/hr.
  - [4] Criteria pollutant emission factors are from SCAQMD AER Emission Factors.
  - [5] GHG pollutant emission factors are from The Climate Registry 2015.
- Assumes that 3 tanks would be degassed on a single day.  
Propane and natural gas emissions from thermal oxidizer were calculated; propane emissions were used in summary calculations.

Thermal Oxidizer Permit Limit

< 40	NOx lb/day permit limit
130	lb NOx/MMcf natural gas
12.8	lb NOx/1000 gal propane
< 30	VOC lb/day permit limit
4000	scfm inlet gas flow permit limit

Source:

AP42, Chapter 1, Table 1.5-1 (0.10 S). S is the sulfur content of propane (0.54 g/1000 ft<sup>3</sup>) (Reference: EPA, Bernd H. Haneke, A National Methodology and Emission Inventory for residential Fuel Combustion).

Tank Degassing Emissions

UST	lb VOC/tank	lb VOC/hr	lb VOC/day	lb VOC total
<b>Gasoline</b>				
Displacement of vapors in tank <sup>[1]</sup>	87.59			
Thermal Oxidizer Control Efficiency	99.9%			
VOC Emissions	0.088	0.28	0.09	0.26
<b>Diesel</b>				
Displacement of vapors in tank <sup>[1]</sup>	0.23			
Thermal Oxidizer Control Efficiency	99.9%			
VOC Emissions	0.000	0.00	0.00	0.00

Notes:

- [1] EPA TANKS 4.09 program: Displacement of vapors from the tank during degassing was estimated by assuming 1 turnover and calculating working losses.
- Conservatively assumed 3 gasoline UST degassed:

3

Remove Shoring, Repave, and Restripe Parking Spaces	3	10						

**Notes:**  
 Assumed start date September 2017  
 Construction data was provided by Amec 4/14/17.  
 Average haul truck capacity assumed to be 12 cyd (per Amec); source: IS/ND, Section 2.3.  
 Contaminated soil exported to: Soil Safe, Inc., a thermal desorption facility, located at 12328 Hibiscus Road, Adelanto, California (110 mi).  
 Imported soil from Hansen Aggregates (40 mi).  
 Demolished tanks would be transported by 3 flatbed trucks to Ecology Recycling in Santa Fe Springs (25 mi).

**Notes:**  
 CalEEMod defaults were used for equipment rating and load factors.  
 CARB fleet mix was assumed.  
 Equipment data was provided by Amec 4/14/17. Equipment was assumed to operate 10 hr/day.  
 Off-road trucks include a dry vacuum truck and a water truck.
