Details:

Monthly Average PM$_{2.5}$ Concentrations at the Port of Los Angeles
January - December 2019

Notes:
Annual PM$_{2.5}$ Federal Standard was 15 µg/m$^3$ until 12/14/2012, when it was lowered to 12 µg/m$^3$.
Annual PM$_{2.5}$ California Standard is 12 µg/m$^3$. 

Monthly data from the Port of Los Angeles shows fluctuations in PM$_{2.5}$ concentrations throughout the year, with certain sites showing variations in their concentrations.

Graphical representations of different sites are included, with each site marked in different colors for easy identification.

Legend:
- Coastal Boundary Site
- San Pedro Community Site
- Wilmington Community Site
- "Source-Dominated" Site
- Federal/California Annual PM$_{2.5}$ Standard

The graph illustrates the monthly average PM$_{2.5}$ concentrations at various sites, with the Federal/California Annual PM$_{2.5}$ Standard line marked in yellow for comparison.
