California Air Resources Board (CARB) 2020 At- Berth Regulation Reguirements:

Beginning on January 1, 2023, emissions from all auxiliary engines from regulated vessel types (see below) must be controlled while at berth with limited exceptions for terminals (Terminal Incident Exception, TIE) and vessel operators (Vessel Incident Exception, VIE). Uncontrolled emissions could result in payment into a remediation fund or enforcement actions to the terminal, vessel operator, or the Port. CARB staff determines the number of TIEs or VIEs, appropriate use of exceptions, payments required into the remediation fund, or enforcement action.

Effective Regulatory Requirements by Vessel Type for POLA:

| = | | | |
|--------------------------------|---|--|--|
| Regulated Vessel Type | Effective Date of Regulatory Requirements | | |
| Container | January 1, 2023 | | |
| Cruise | January 1, 2023 | | |
| Refrigerated Vessels (Reefers) | January 1, 2023 | | |
| Roll- On, Roll- Off (RoRo) | January 1, 2025 | | |
| Tankers | January 1, 2025 | | |
| | | | |

Break Bulk)

No requirements per 2020 At Berth Regulation

General Cargo

No requirements per 2020 At Berth Regulation

This report only provides data on AMP [®] and CARB certified AMP [®] equivalent systems (CARB Approved Emission Control Strategy, CAECS). POLA does not receive all information on the CAECS that may have been used by a terminal or vessel operator to comply with the At Berth Regulation. To obtain all compliance information, please contact CARB at http://www.arb.ca.gov/ports/shorepower/shorepower.htm.

NOTE: POLA is a separate port from Port of Long Beach under the 2020 At Berth Regulation.
